All that said, I ran the 101 during my apprenticeship DXer years. Running that old rig to a two element copper pipe (hand aimed) yagi on 10 meters at the sunspot max in the late 80's I worked DXCC. I can still remember the first time I worked a contest and heard all the great new countries in Europe! (Wow, Germany! And Austria! There's Italy and Leichenstein! I was like a kid in a candy store, working 30 or 40 new countries with every contest.

Of course, the limitations of the 101 set in after a bit. I can remember trying to get through to a dxpedition (maybe Clipperton?) by tuning the split real fast by hand.

Tuning the finals is not hard, but takes some practice. A dummy load is important since it can take a while at first. Pick a frequency. Set the drive power to a low value. Set the operating band. Set Tune and Load to approximate points. Transmit into the dummy briefly. Peak the Tune. Peak the Load. Repeat. Yer on. Do that every time you change frequency by more than a little bit.

All that said,I think you can have a lot of fun with a 101. A friend brought his old 101 in for me to look at last winter. I went through the power supply to clean things up and afterwards tuned it up and went on the air. There happened to be a ZA SSB operation on 20 at the time, so I set up on him. He was still working simplex, so I had a chance. Second call was the charm and I put him in the log. When the qsl card came through I sent it on to my friend so he would know his old rig had come through in a

pinch.

Hamfest fodder? Perhaps. Sometimes I still wish I hadn't dumped mine for a shiny new(er) rig. They go for about $250 most days. I may just grab the next one I see.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Eico Model 950A Capacitance/Resistance Checker.....$35 plus shipping
This unit works well and is in beautiful cosmetic condition considering it's age. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/eico950a.jpg

Hewlett Packard HP3400A RMS Voltmeter.....$40 plus shipping
This is a tested and is a working unit. It does not include a power cord. It does include a copy of the manual on CD
http://members.cox.net/radiostuff9/hp3400a.jpg
http://members.cox.net/radiostuff9/hp3400a2.jpg
http://members.cox.net/radiostuff9/hp3400a3.jpg

Hewlett Packard HP400E AC Voltmeter.....$30 plus shipping

This is a tested and is a working unit. It does not include a power cord. It does include a copy of the manual on CD.
http://members.cox.net/radiostuff9/hp400e.jpg
http://members.cox.net/radiostuff9/hp400e2.jpg
http://members.cox.net/radiostuff9/hp400e3.jpg

Realistic DX-160 Communications Receiver & Matching Speaker.....$125 plus shipping
This is a 5 band solid state receiver that covers 150 kHz to 30 MHz. It has a BFO for CW and SSB reception and bandspread for the ham bands. This radio will run on 110 volts AC or you can run it from a 12 volt battery. Other than a few very minor scuffs, this receiver is in really nice shape and works well on all bands. I even heard some signals down in the VLF band. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/dx160.jpg
http://members.cox.net/radiostuff9/dx1603.jpg
http://members.cox.net/radiostuff9/dx1602.jpg
http://members.cox.net/radiostuff9/dx1604.jpg
http://members.cox.net/radiostuff9/dx1606.jpg

National Type MCN Dial.....$25 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Heathkit SB-604 External Speaker.....$30 plus shipping
This is the matching speaker for the SB-104. The speaker sounds great

and is in nice shape with a few minor scuffs.
http://members.cox.net/radiostuff9/heath_sb604.jpg
http://members.cox.net/radiostuff9/heath_sb6042.jpg

Cold War Relic - Civil Defense - Radiological Survey Meter......$75 plus shipping
These are NOS meters painted in Cvil Defense yellow with a neat Civil Defense logo left over from the cold war. These were to be used for checking for radiation after a nuclear attack. Includes manual, an original but now dead vintage battery (note the 20 cent price), remote cable (not shown but stored in the unit), and carrying case. A neat collectible for your 1950ï¿½s or 1960ï¿½s station to set by your CONELRAD alarm
http://members.cox.net/radiostuff9/cd_meter.jpg
http://members.cox.net/radiostuff9/cd_meter2.jpg
http://members.cox.net/radiostuff9/cd_meter3.jpg

http://members.cox.net/radiostuff9/cd_meter5.jpg
http://members.cox.net/radiostuff9/cd_meter6.jpg
http://members.cox.net/radiostuff9/cd_meter7.jpg

Schaub Lorenz "T30L Weekend" German Portable Radio.....$45 plus shipping
This is a Portable Radio made in Germany. As near as I can determine this radio is from the late 1950's or early 1960's. This is a 3 band transistor radio that covers long wave, medium wave (standard broadcast band) and FM. The radio is in beautiful shape cosmetically but it is not working. I can hear weak audio from the speaker but no stations. Their is no battery acid damage. The two antennas are in good shape. The insides are clean.
http://members.cox.net/radiostuff9/schaubl.jpg
http://members.cox.net/radiostuff9/schaubl3.jpg
http://members.cox.net/radiostuff9/schaubl5.jpg
http://members.cox.net/radiostuff9/schaubl6.jpg

Jackson Model 103 Tube Tester.....$30 plus shipping
Older tube tester in working condition.
http://members.cox.net/radiostuff9/jacksontubetester.jpg
http://members.cox.net/radiostuff9/jacksontubetester2.jpg

Triplett 800 VOM with Manual.....$40 plus Shipping
Very clean working VOM with original manual
http://members.cox.net/radiostuff9/triplett_800.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg

Thanks for looking.

I used an FT101 for many years. With the tubes and the analog dial, it
certainly is a boatanchor in my book. Beloved boat-anchor, perhaps?

The old righas some stability problems and really wouldn't work with
modern computer generated modes. But for old fashioned SSB, CW and RTTY,
it was a lot of fun. The 101 also lacks split capability, which means
serious pile-ups cannot be entered. A second vfo is part of the answer,
but is very hard to find.

All that said, I ran the 101 during my apprenticeship DXer years. Running
that old rig to a two element copper pipe (hand aimed) yagi on 10 meters
at the sunspot max in the late 80's I worked DXCC. I can still remember
the first time I worked a contest and heard all the great new countries in
Europe! (Wow, Germany! And Austria! There's Italy and Leichenstein! I

I have a CRT removed from a Tek Scope which WAS working when removed.
Problem is, I can't recall the exact model I took it out of! IF the part
number is the same as that you need, I'll make you a hell of a deal....
Provide me with a Tek CRT PN and I'll match it to see if this will help.

Remove the "NO SPAM" to reply.

Pat, when you get the schematic, check your rig and see if its an early Valiant I, or not. An early Valiant will have wirewounds with slider taps instead of the 2 side mounted pots for mod bias, etc. If yours has the ww resistors, I've got the early schematics... somewhere here... BAMA doesn't have that particular one.

CORRECT HALLICRAFTERS SX-73 BALLAST TUBE?

I was hoping to hear from anyone who has a SX-73 Hallicrafters or the
military version R-274, R-274D.
What I'd like to clarify is what is the correct ballast tube type (number)
that is used in the octal base socket. Mine does not have the original
ballast tube in it. The type in mine is a type 6-4 AMPERITE
ballast/regulator tube, and the receiver does work. I just want to be
assured this is the closest match
for the "octal base" ballast tube originally used in these receivers, or is
this type indeed correct . What type does your SX-73 have in it?

Thanks, Dan

Source record: 22521

I never thought it would come to this.
I used to lie in bed with a flashlight and devour the Heathkit catalouge, or my 1954 ARRL handbook with all the nice ads in back. I vowed I would have the biggest, most well equipped station possible (instead of my old GE table radio with 3 SW bands and no bfo).
I spent the past 30+ years collecting anything I could get my hands on. I never imagined I would value space as much as an old Heathkit receiver but, there it is.

http://cgi.ebay.ca/ws/eBayISAPI.dll?ViewItem&category=4673&item=5714263120&rd=1&ssPageName=WDVW

I have yet to dust off an HRO-7, NC2-40D, various SB series stuff, SP600, Drake C-line.....

I would rather sell or swap rather than going the ebay route.

Kevin VE1TV

I have the following items for sale. Prices do not include shipping. I
will ship overseas.

Hammarlund HQ-129X Speaker.....$35 plus shipping
Needs repainting. Rusty but works and does sound good
http://members.cox.net/radiostuff9/hamm_spkr.jpg
http://members.cox.net/radiostuff9/hamm_spkr3.jpg

MacElroy Bug.....$40 plus shipping
This is a project key as the mainspring is broken and will need to be
replaced - seen in photos.
http://members.cox.net/radiostuff9/mcelroybug.jpg
http://members.cox.net/radiostuff9/mcelroybug2.jpg
http://members.cox.net/radiostuff9/mcelroybug3.jpg

Heathkit C-3 Capacitance Meter.....$35 plus shipping
Nice working capacitance checker with photocopy of manual
http://members.cox.net/radiostuff9/heathc3.jpg

Heathkit SG-7 Signal Generator.....$35 plus shipping
Nice working signal generator that covers 160 kHz to 500 MHz with
photocopy of manual
http://members.cox.net/radiostuff9/heath_sg7.jpg

NOS Cold War Relic - Civil Defense - Radiological Survey Meter.....$75
plus shipping
These are NOS NIB meters painted in Civil Defense yellow with a neat
Civil Defense logo left over from the cold war. These were to be used
for checking for radiation after a nuclear attack. Includes manual, an
original but now dead vintage battery (note the 20 cent price), remote
cable (not shown but stored in the unit), and carrying case. A neat
collectible for your 1950ï¿½s or 1960ï¿½s station to set by your CONELRAD
alarm. I have a whole bunch of these.
http://members.cox.net/radiostuff9/cd_meter.jpg
http://members.cox.net/radiostuff9/cd_meter2.jpg
http://members.cox.net/radiostuff9/cd_meter3.jpg
http://members.cox.net/radiostuff9/cd_meter4.jpg
http://members.cox.net/radiostuff9/cd_meter5.jpg
http://members.cox.net/radiostuff9/cd_meter6.jpg
http://members.cox.net/radiostuff9/cd_meter7.jpg

Hewlett Packard HP3400A RMS Voltmeter.....$40 plus shipping
This is a tested, working unit. It does not include a power
cord. It does include a copy of the manual on CD
http://members.cox.net/radiostuff9/hp3400a.jpg

http://members.cox.net/radiostuff9/hp3400a2.jpg
http://members.cox.net/radiostuff9/hp3400a3.jpg

Hewlett Packard HP400E AC Voltmeter.....$30 plus shipping
This is a tested, working unit.. It does not include a power
cord. It does include a copy of the manual on CD.
http://members.cox.net/radiostuff9/hp400e.jpg
http://members.cox.net/radiostuff9/hp400e2.jpg
http://members.cox.net/radiostuff9/hp400e3.jpg

Realistic DX-160 Communications Receiver & Matching Speaker......$125
plus shipping
This is a 5 band solid state receiver that covers 150 kHz to 30 MHz. It
has a BFO for CW and SSB reception and bandspread for the ham bands.
This radio will run on 110 volts AC or you can run it from a 12 volt
battery. Other than a few very minor scuffs, this receiver is in really
nice shape and works well on all bands. I even heard some signals down
in the VLF band. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/dx160.jpg
http://members.cox.net/radiostuff9/dx1603.jpg
http://members.cox.net/radiostuff9/dx1602.jpg
http://members.cox.net/radiostuff9/dx1604.jpg
http://members.cox.net/radiostuff9/dx1606.jpg

National Type MCN Dial.....$25 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Schaub Lorenz "T30L Weekend" German Portable Radio.....$40 plus shipping
This is a Portable Radio made in Germany. As near as I can determine
this radio is from the late 1950's or early 1960's. This is a 3 band
transistor radio that covers long wave, medium wave (standard broadcast
band) and FM. The radio is in beautiful shape cosmetically but it is not
working. I can hear weak audio from the speaker but no stations. Their
is no battery acid damage. The two antennas are in good shape. The
insides are clean.
http://members.cox.net/radiostuff9/schaubl.jpg
http://members.cox.net/radiostuff9/schaubl3.jpg
http://members.cox.net/radiostuff9/schaubl5.jpg
http://members.cox.net/radiostuff9/schaubl6.jpg

Jackson Model 103 Tube Tester.....$30 plus shipping
Older tube tester in working condition.
http://members.cox.net/radiostuff9/jacksontubetester.jpg
http://members.cox.net/radiostuff9/jacksontubetester2.jpg

Thanks for looking.

Anyone with the merest knowledge of DC Electrical Fundamentals can go into about any Radio Shack company store and be in a position to tech-slam the employees. Radio Shack has pursued a policy of not hiring electronics people for decades, they have remained to the small extent that they are in the electronic parts, tools, books, and 'test equipment'for image purposes and I have been repeatedly told as much by Radio Shack management.

Radio Shack is a cancer on the ass of all electronics hobbies and all electronics professionals, what few remain.

They should be stripped of their image by persistently and consistently reminding the technically less knowledgeable that "real nerds won't set a foot in there". Radio Shack's death would be a good thing IMO.

Putting MM on the dime would serve a lot of purposes. It would displace the devious FDR, send a signal to the Islamist world, make the currency more attractive, and be a thorn in the ass to the Kennedy Family, to name four good ones.

I don't understand this attitude towards RS at all. If you don't like it, don't buy from them. You now have a zillion alternatives right through the internet.

Then again, you may actually be the type of guy that walks into Best Buy or Circuit City and actually relies on the snot-nosed salesperson knowing all about TVs and giving you advice on which to buy. It's a self-serve world out there now. If you want premium service, you'll have to pay extra for it and buy from a smaller shop in which you can get help. But you'll pay more for it.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday August 15th 2004
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Hmmm... What's that they say in all their ads?
"You have questions? We have answers." Oddly
enough, if your question is even the least bit
technical, their answer is either "I don't know",
or it's bogus.

Every once in a while they screw up and hire folks
who understand electronics. But IME, not too
often. And heir selection is *abysmal* - and
getting worse.

Granted, the hobbyist market is down. But I contend
that RS helped destro it.

This thread reminds me of a conversation I overheard in a Radio Shack store
many years ago.

Salesman, trying to sell customer a Micronta sliderule: "See, if you want
to multiply 2 by 2, you put this 1 here on this slider over the 2 down here
and move this window thing so this line here is on the 2 over here. Then
the answer is down here, see, 2 times 2 equals, hmmm, about 3.95.

Not on Sunday afternoon when the transmitter is down and the boss is screaming at you and you're trying to explain to the man that you want an XLR plug with four pins, and not three, and he's telling you that nobody uses XLR plugs any more.

4176. FM dead on my Hallicrafters SX-42

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-11 14:30:49 UTC
From: porreta99@yahoo.com
Message-ID: <61c031e6.0408110630.231683ab@posting.google.com>
Source record: 22537

All,

I just finishing re-capping a Hallicrafters SX-42 I bought recently. Thanks Phil for an excelent web site (http://antiqueradio.org/) and big help. This is my first restoration of such complex communications receiver. I did restore a Fisher KX-200 and X-202-B amps, a Sansui 320 receiver and a few smaller radios. The rig was in excelent condition and after re-capping and cleaning up the contacts the AM and shortwave bands worked great...

... but the FM is completely silent. When I move the band switch to the upper 2 bands I can hear static in the AM reception and silence when I switch to FM. Does this preclude any problem with the bandswitch? I inspected the bandswitch and the wafers look very clean and don't show any signs of carbonization.

I cleaned and inspected the reception switch as well and it seems OK. All tubes check fine and voltages are as they should be.

I'll continue investigating the problem but any suggestions are greatly appreciated.

Thanks.
--
Elias

Mine has the pots so it is a later version.
I am about ready to go in and replace the old electrolytic capacitors
today.
Should the .1 400v and .5 400v paper caps go also? If so, replace
them with what ?
I am planning to use 1n5407 diodes and bypass the rectifier tubes(but
leave the filaments on for 'glow' appeal).

I must say, this Valiant is a work of art. Such beautiful
components. It's a shame to see them relegated to the dust heap.

Did you ever hear the FM working?

Does the second to top band work?. This is something like 27 to 60 Mc, if I recall. There's usually some paging service noise or maybe a cab company or something there This band also uses the 10.7 Mc IF section.

In the AM position, you say you can hear static. Do you hear any FM stations in the FM band? The AM detector should detect FM stations, using the frequency slope of the IF transformers.

It's very easy to test the radio's local oscillator. In the FM position, the oscillator runs either 10.7 Mc above or below the signal frequency. It could be either, and I forget which. Another FM radio can pick up the oscillator signal. Tune the second radio to, say, 90 Mc. Tune the SX-42 around 79 and 101 Mc. Somewhere around one of those frequencies, you should get what sounds like a dead carrier. If the top band oscillator section is misaligned, the actual indicated frequencies could be different.

If your oscillator seems dead, a 7F8 which doesn't want to oscillate at FM frequencies is a possibility, but I'm suspicious of locktal sockets and pins, and a good cleaning might be in order.

By the way, the RF amps are also a possibility, but they don't head up the list. One of the RF amps on my SX-62 went to sleep, and I hardly noticed. If every thing else is working well, this radio has a fair amount of reserve gain. I could pull both RF amp tubes, and the radio would still hear FM stations OK, as long as I had a wire on the antenna terminals. Didn't need a wire with the all the tubes in.

Hi, Pat

If you shunt the 866A's with diodes, you won't get the blue glow.
The peak 866A drop is only 15V, so it is not worthwhile
to solid-state, if you are going to keept the tubes lit in any case.

Mercury rectifiers are good and reliable, if you allow
a long warm-up time before applying the HV, especially in a cold room.

Hi All,
I am forced to sell my Hallicrafters SX62A and matching speaker. It is in cosmetically very good condition. It is in excellent operating condition. The matching speaker is also in very good condition. Both are all original and have no modifications. I am asking $300.00 for them. The buyer will have to pay for packing and shipping on these items from the 07860 zip code. Photos are available to interested buyers.

A 454 was too big to haul??? It is a nice portable, about
12" x 8" x 16", and 25 pounds.

Yeah. We've seen this thread before -even heard from the guy with the
website too, IIRC. The place definitely isn't a hobby shop anymore.
Closer to a home electronics specialty shop. It may do that pretty
well, but certainly it DOES suck at its 'old' business.

No, the 454 is a 150MHz portable scope. It is
a very nice scope, the only problem with it is the
CRT is kind of tiny. It has one of the sharpest
traces ever seen on any oscilloscope.

I find it to be the exception to find knowledgable sales
people in any store.

Why would anyone that has a good grasp of electronics want
to waste themselves working retail?

> Thanks Phil for an excelent web site (http://antiqueradio.org/) and
> big help.

If the FM is dead, two things too check as a start: First, see if you
can force a 10.7 MHz signal through the IF stages. In the SX-42, the
AM 455kHz IF amps also double as 10.7 MHz IF stages and
utilize 455kHz and 10.7 MHz IF cans in series. On FM, there are
two additional 10.7 IF (limiter stages) before the FM detector as
well. You could also inject audio at the output of the FM detector
to verify that the audio paths are working in that mode.
If the IF stages are all working and passing a 10.7 MHz signal,
I'd verify that the LO is working on the FM band.

This should be an easy problem to isolate using signal injection
or signal tracing.

Pete

Hello,

I know that this is not an amateur radio boatanchor but I was given a Neutrowound 6 tube radio that was manufactured in 1926 and thought someone here might be able able to help me find a schematic for it.

From what I can gather on the web, Neutrowound never published their schematics for some reason, but I wonder if anyone who has restored one may have produced a schematic as part of the documentation.

Any help would be appreciated.

Thanks es 73

In this case, the XLR connector didn't go bad, the %^$%#@!!! TFT remote
control unit blew up, with a nice hole in the PC board of the horribly
undersized power supply and all sorts of collateral damage. And one
of the other stations in town had a spare Moseley unit that I was able
to grab, but not the connectors for the thing.

I swear, my contract is going to say "no Sparta consoles, no TFT STLs"
soon.

I liked going to some of the Radio Shacks in San Antonio, TX, back
when I was in the Air Farce. Most of the [classified school]
instructors seemed to have part-time jobs at them, and that was a
group with really serious clue.

In MHO, radio shack should have gone out of business years ago!
I use to know 3 people that worked in different stores.
All of them said basically the same thing. The equipment is nice looking but the insides are substandard and the parts
(if they have them) are only experimenters quality. I once asked for a replacement rod type pull up antenna. The guy looked at me and went DUH. Then I said and motioned, silver antenna, pull up, usually on many radios. He replied, we don't have anything like that. I went in the back and found a very large choice of 3 types. I brought him one and he said, "oh, is that what you wanted"? I put it back on the rack because it was the wrong one I needed, of course. DUH!
Where have all the REAL electronic stores gone?? :-(

But that's my point - why in the world would you rely on the advice of a radio shack employee? Their job is to ring up stuff at the register. They don't know anything about electronics.

That's your fault for not having backup parts in the first place....and
besides - why not just look around yourself. Radio Shacks aren't that big -
ignore the sales guy and just find the plug yourself.

I wouldn't know because I don't sit there and chat and question those guys
to find out. I simply write up my list of what I need before going there,
walk in, find the stuff, and then I say "ring it up." And then they
invariably try to get me to buy batteries or some other junk, and I tell em
no.

A quick, painless way to shop at Radio Shack.

Hi Frank,

Thanks for the reply. I did test the local oscilator and it seems to
be working fine. I could clearly hear a dead carrier at the frequency
range you mentioned.

No, I was never able to hear the FM. Also in AM mode I can't detect
any FM station at all. I'll keep on looking.

Thanks.

Because Radio Shack no longer has 4-pin XLRs. They also do not have the
1% resistor assortments that were very handy, or the PZM microphone (which
they have replaced with a higher margin boundary mike that is not as good).
In general the quality of their connectors is marginal at best (and I have
got RCAs from them that were chrome plated and therefore would not take
sold).

The problem is that the parts and connectors market is shrinking, and there
are no longer small parts houses in most towns that cater to the TV repair
business... because there are no longer TV repair businesses. This means
that if you need parts on short notice there is often no other choice.

I usually kill the "new cell phone" pitch by walking in with mine in open view. Works most of the time! As to shopping, you're better off knowing what you want and need and what they offer before going in. At least most of us are better equipped to do that, than the average person! Usually, the guys at the store I go to, know my electronics background, so they rarely bother me. It's the newbies who don't know, who approach me. It is sad that many are clueless in what they sell. It isn't easy knowing everything. What hurt them, is the motto.. "You have questions, we have answers." Too many take that for granted. The employees I suppose try to help even if they come up with half wit answers. They "should" endeavor to learn what they sell, but they're also made to push the cell phones and such..... They can't be making any commission worth a damned off off a $1.99 part. The other thing is too, that with SMT technology, not many are repairing let alone building/experimenting these days.

I'm selling my near perfect Collins 75A-1 and 32V-2 station. Both radios look and operate "as new." Complete with all original hardware, knobs, terminal covers, and original manuals (not copies). Receiver has had recommended CQ and ER updates. No dents, dings, or scratches. Includes Matching speaker. Price for all is $1950. For pick up only near Greenville, SC. I'm not interested in shipping or splitting these up, so please don't ask.

I didn't know you'd ever worked at KCSC-FM.

Regulators with failure modes that involve smoking the full-wave
bridge.

Capacitors that explode.

Leaking tantalum capacitors that eat the traces off the boards.

Leaking batteries ditto.

UPS battery chargers adjusted so that the "float" voltage is about 10%
too high, so that the batteries outgas, leak, and die.

Ground-loop city.

A plate capacitor on the ttransmitter's final that turns out to be
a strip of PTFE wrapped around the final tube, above the HV lead,
and which gets punched through about once a month.

A grounding hook with a broken resistor in it. The idea is to
discharge the HV PS capacitors "gently". That's fine, as long as the
resistor maintains continuity and discharge to "safe" levels (0 VDC
for me, TYVM) doesn't take a week.

Hmmm Wonder which one I was thinking of. It WAS the "portable" kind.
Maybe 12-15 inches wide 8 inches high and foot & a half deep....usually on a
small cart facing about 50 degrees upward. perhaps the 450 MHz ain't
correct. It was fast for its time.

Could be a 485, it is about that size, and a portable 350 MHz
scope. It too has a smallish CRT. One of the ones that made
Tektronix change the vert/horiz markings from V/cm to V/div.

A 485 will easily trigger and display a 600 MHz signal.

You had grounding hooks with resistors in them? Ours were simply 1/4"
diameter bent aluminum hooks connected to ground with #6 stranded
wire! (At least on the Gates BC-10B and RCA Ampliphase 50-Kw models).

I agree that the newer broadacast transmitters are horrow showd to
repair, but their selling point is that they are much more compact and
inexpensive. Still, putting a resistor in series with the safety
grounding hook? That's insane!

Cheap transmitters allow broadcast operators to buy transmitters for the cost of one of the older rigs, but repairs of a failed transmitter can linger into hours or days, unlike minites and seconds of dead air time with a single transmitter as it was in the past.

Just as an afterthought, I remember one failure when the transmitter of WBUD in Trenton kicked off while I was on duty. The transmitter kicked off on a hot summer day, and on restart attempts I saw the antenna feed current meter pin on each attempt. I was intercepted by the station owner while I was in the process of scrambling to find a large screwdrive and a flat file in our repair shop, who demanded to know why I wasn't inside the transmitter trying to located the problem. I ignored him and ran out into the antenna field, and on the second tower of our 4-tower array found a large, carbonized insect in the lighting gap between the tower and ground. Once found, the problem took no more than 5-seconds to resolve and we were within 15-seconds of that back on the air.

Given that a problem like this COULD have shut the station down for a day or two, the station owner remained pissed that I had ignored him and simply done the job that he was paying me for. Fortunately shortly after this even I received my degree and went to work for Eastman Kodak in far away Rochester, NY.

I suppose that the only reason that I dredge up this ancient history is that this was the expected technical performance of an FCC license holder back in the 1950-1970 era. What is it today?

They don't have them any more.

They do have guys with SBE certifications who basically have the same
technical performance, except they spend their time removing viruses
from automation control systems....
--scott

I got a Volumax on the bench today too. Unfortunately the T-pad
on the input seems to be bad.

Not really. Your store is within
reasonable distance of *what* percentage
of usenet readers?

Yeah, I thought so.

There are three RS within reasonable
driving distance of my house. One is
at the mall. I hate malls. So that's
out.

Of the other two, one has two employees
who really try to help, the other has
one. None of them really know much about
electronics. But they're good people,
and they try, and I can always figure out
if they have what I need (IOW, I ran out
of something and I need it now).

One of these stores used to have a
guy who knew something. Presumably the
guys in black body suits from RSHQ hauled
him off in the middle of the night and
shot him. Tell your HP friend to watch
his six.

``You want a 12AX7? It's a what?

Then we're agreeing. Except that their
ads suggest they *are* there to help by
giving advice.

I never ask them anything, except where
something is when I can't find it. In
which case the answer lately is almost
always, ``We don't carry that any more.''

But lots of other folks believe the ads.

A agree with the post about not using solid state rectifiers. I use a pair of 3B28s instead of "Old Sparkey" (the 866s). I do, however, use a pair of 1N4007's in the neg bias rectifier circuit. Regarding the paper caps, I change them all out, en masse. While you have your unit out of the case, please check the two meter shunts (plate and mod current). These nichrome shunts are very prone to be off by quite a bit. You can rebuild the shunt (there's usually enough length, either way. I've taken to using fixed resistors instead of the wire jobs and it seems to work OK. Finally, consider adding an additional fuse to individually protect the 2 power transformers.

Acknowledging all the reports and notes about the various types and specs of the 6146-series tubes, I can only add that I use 6146Ws, date coded in the 80's, in both the modulator and final of both my Valiant I transmitters without any untoward results, whatever. I also use them in Collins S-line, again without problems, whatsoever. I can neutralize each of the above I/A/W the published procedures. I am, however, more vigilant in tube-changing using these tubes, given the info currently available.

]Is there any reception on the low VHF band? If the expected signals come in there, it would indicate your IF sections are OK. In that case the mixer circuit would be a good suspect.

Do you have the schematic? I think there's one online at the Boatanchor Manual Archive. There's also a couple of regular vendors on ebay who sell nice quality reproduction manuals.

Do you have a signal generator? As Peter suggested, that's the next step.

I have an SX-42 waiting to be resurrected (it works, but I'm leary of turning it on much). Does anyone have a list of caps to "recap" it, so I can do the shopping easily?

I understand that "recapping" it is almost a necessity to keep it going, since a bad cap can damage other parts to the point of writeoff.

Hi John,
First, I never said all were stupid, but many of them
really don't have a clue. They could be selling shirts at the Gap.
RS should really train these guys a bit more or hire people with a
bit more electronic knowledge. After all, RS is an electronic store, right?
As to your question, it is a good one.
One guy worked at Grumman before he retired there
and wanted to keep busy a few days a week.
The second guy was a ham radio extra who worked there
during the Christmas holidays last year.
And the third was a girl who use to work at Verizon. Not as an operator
but in the tech area.
All these people I know are not dummies by any standard. It is just
RS usually hires the young that are not to experienced as of yet.

>>>K3UD

Hi George,
Saw ur post on rar+p and figured someone might jump in. Guess not.

Actually Neutrowounds seem to be fairly common...and run-o-the-mill.
Most sets of that era were pretty generic, the neutrodyne models got a
bit fancier because they neutralized the tubes often with mechanical
gizmos that you may not readily recognize as a neutralizing cap. Apart
from that there weren't many ways to skin the same cat back in the
mid-20s and neutralizing 6 howling triodes was the latest thing.
There's a great webpage on neutralizing the old boy but I see my link is
dead so here's an alternative...
http://web.archive.org/web/20031207185034/http://home.comcast.net/~radiowarren/align.html

If that link is rendered useless by chopping up then try this:
http://web.archive.org/web/*/http://home.comcast.net/~radiowarren/align.html

If getting it to make some noise is the immediate problem the most
common maladies are in order:
1. Bad audio interstage xfmr
2. Bad audio interstage xfmr
3. Bad audio interstage xfmr
Did I mention the old audio xfmrs are very prone to failure?
4. Detector grid leak way up in value (2-10 meg is typical, beyond that
is too much).
5. Grid leak cap (normally 100-250mmf) leaky.

Apart from that there ain't much left other than the toobs. I guess
you've got all '01As or maybe a '12A thrown in as detector or '71As for
audio?

If I can be of any help feel free to contact me directly. I can't say
much specific to your exact model but I'll do what I can. In the
meantime if you look on nostalgiaair.org at something like the
Freed-Eisemann NR-5, NR-6 you'll see some representative schematics.

I can only offer a personal observation from many years ago (1964-ish)
when the SX-42 caps were still expected to be fresh. My Elmer lent me
(me=an 11-year old...they don't make Elmers like that anymore) his SX-42
to use over Xmas vacation. Of course I didn't hook up anything special
for a VHF antenna and all I got was a slight whisper from 3 of the 4 FM
stations in town. I kinda figured then that this radio was pretty deaf
up at that end of its range although the local paging system on about 35
Mc boomed thru.
I've never heard anything to the contrary.

The 6E5 is a drop-in for the 6U5; the only difference being the
eye sensitivity to grid voltages. One tube was designed for
sharp cutoff tubes, the other better matched remote cutoff
characteristics. Using a 6E5 (which is much cheaper) gives a
busier eye display. The other option is to build a tube adapter
so the 12-volt 1629 eye tube can be used--- a Google search
will lead to several webpages detailing the specifics for
building the adapters.

Be thankful the set didn't use a 6T5, used in two model years
for some very desirable Zeniths. Darn things are going for
a few hundred each in NOS condition,

Pete

Bill:

I don't think your experience is typical. I currently have one SX-42
and two SX-62A receivers on hand and they all perform very well on FM.
When tuned up and working well, the SX-42 is a very sensitive
receiver on all bands.

Best Regards,

Ed

Hi All:
I don't find EL-156 on the chart and I bought tube test dada book from
ebay.The book including "EUROPEAN TUBE TYPE" but is not find EL-156.
Will the Hickok 539B test them.
If so, how do I set up the tester?

Thanks

Liu

You can probably get them at Home Depot or Lowes for less that the
shipping to you. I've seen them for 6 and 7 dollars.

Was poking thru Ebay and came across this:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4720&item=2263205248
&rd=1

Here your chance to obtain a really "rare" spy radio from WWII ;) Buy it now
proce is verrrryyyy reasonable. :) Probably the only example as well and musy
be a lab prototype to boot since, if memory servers, the S-38 went into
production in 1946 hehehehehehe.

Vern lives in northern Wisconsin, (north of Wausau and just south border
with Michigan's Upper Peninsula .. "true land of lakes area")
the local Home Deport is not necessarily "around the corner".

Vern,

I use to see a large number of surplus "66" blocks at hamfests and they can
be found through a number of surplus electronics sources (e.g. All
Electronics, MECI, etc.). If you have a demolition of an older commercial
or office location, you may find some headed for the scrap yard or in the
dumpster.
http://www.homephonewiring.com/

Do you want a "50-50" version of the 66 block?

Message-ID: <mf2dnTscH7m39IPcRVn-iA@adelphia.com>
Source record: 22435

I have a rather nice, albeit vintage, Tek 585A 100mhz scope with an 82A dual-trace plug-in. Both of these units work perfectly and are in remarkably nice condition. I have the books and an excellent 500/53A scope mobile to go with it. There are about 7 probes (all good) included. Additionally, I'll add a CA and Z plug in, and a Type 81 plug-in adapter. The latter are un-tested but appear fine! All of the above is available for $100, pick-up in the Washington DC/suburban MD area (I'm in Frederick, MD). Tnx de K3HVG

4275. FS: Triplett 3444 Tube tester

Newsgroup: rec.radio.amateur.boatanchors

From: K3HVG <jeepp@adelphia.net>
Message-ID: <SqadnXh7RIti9IPcRVn-rA@adelphia.com>
Source record: 22436

Available is a nice, clean, and fully functional Triplett 3444 tube tester. I have the manual and a chart update book. Both bridge rectifiers have been replaced (the old metallic don't last forever!). The case is OK, with only slight wear showing. The panel is near perfect as is the chart roller. $250, pick-up in the DC/MD/NoVa area.

4276. FS: TMC TAC-1 antenna tuner

Newsgroup: rec.radio.amateur.boatanchors

I just looked at mine, the lettering on the top is barely readable,
but it looks like the same as yours....it clearly says AMPERITE, and
the numbers below at first looked like 0-4, but upon closer
inspection, the 0 I'm pretty sure is a 6. Don't know if it's the
original, but if yours and mine have the same number, that's probably
what's supposed to go in there.

Vern -

My brother-in-law is a fulltime fishing guide for Wisconsin (he has the
fishing shows, etc.)
and coordinates with other guides in Michigan UP and lower Ontario.
I have been up there a couple of times (once on business at Wisconsin Rapids
paper mills) and northern Minnesota.

Chuck, what should Vern do if the bear has the 66 block he wants? ....
hope he is the Hamms bear and will trade for a 6 pack? :-)

gb

BTW, Chuck I just looked in my telephone parts and I do have a Siemon
S66M1-50 (4x50 66 block) with the mounting bracket, clear protective cover
and label strip (but no bridging clips) - just like in these instructions.
http://www.siemon.com/int/installation_instructions/pdf/S66_Field-Terminated_M_Series_Bloc
ks.pdf

IF you can't find one, send me an e-mail.

Thanks Greg.
I don't mind the bears at the Oneida County landfill...there's enough to eat
for all of us out there.
I think I may have located a 66 block somewhat locally, but I will keep your
offer in mind.
Thanks for your input into this newsgroup string and...and...I guess I'll
see you out by the "ALUMINUM AND TIN RECYCLABLES" container!
My best,
Vern

Your local Graybar will have them for a couple bucks each. It would cost
more in postage for me to send you some out of the junkbox here.

Hello
Just had a quick look and the Ballast in my sx73 is 7H-4B. Someone has written "Amperite 6-4" in the manual as the parts list doesn't give any part number.
Just out of interest where does one get the lamps E5&6?

I'm in search of a radio to get back into the hobby. I'd like to get something from the Kenwood family but in all the googling I've done, I have no idea what the differences are between the TS-530, TS-830 and TS-930. Not so much interested in raw specs as I am in what features differentiated these models.

I've found reviews on www.eham.net and specs on www.qsl.net. Nowhere can I find something more like a sales brochure.

From my own experience, drop the 930 from your list. Great rig but
ultimstely unrepairable by anybody. 530 and 830 are survivors.

-Bill

Unfortunately, the supply of parts for all these rigs is getting low.
If you are thinking of using it for a while and replacing it if it breaks,
any would be ok.

I have a 930S which has been working for a long time. It was broken by a
close lightning stroke and it was fixed. The power supply for transmit died
and was fixed. So they can be fixed if you have parts and have a
knowledgeable repair person. There is even a board which improves its
operation made
by PIEXX (www.piexx.com) and which replaces the old microprocessor board.

I have used mine primarily on CW. With the extra crystal filters (AM and
Narrow CW) it has worked very well for my interests. You will have to go up
at least one generation though to get a transceiver that can be controlled
by a PC or MAC or one that can operate on 60 Meters. It has a sensitive
front end, keys well, and its variable bandwidth tuning, RIT, and audio
filter really help out. None of the
rigs has direct frequency input which is a pain. Nor do any of them have FM.
The 930 does have AFSK.

I think I still have the sales brochure if you really want a copy.
Good luck on your decision.
Regards,
Ed, N5EI

I stand corrected. The PIEXX board permits some computer control of the 930.

If you are an ARRL member, see product reviews, has all three models you are interested in.
It is for members only so if you do not belong to the ARRL-- get a buddy who is a member to print them out
URL is:
http://www.arrl.org/members-only/prodrev/bymfg.html#K

The reviews cover features which should help with your decision.

Having owned two of these -- the TS-930 and the TS-830, I can recommend the TS-830.

Our local guru who repairs Kenwoods sez "The TS-830 was the pinnacle of Kenwood design for this era".

Also you should also look at the Kenwood TS-850 -- another winner of its era.

I'll second this comment. My current rig is a TS-830S and I've been
very happy with it. Since I haven't owned the 530 or 930, can't
help with feature differences. BTW: there is a version of the 830S
which has CW filters...its called the gold version. Mine isn't.

Steve
p.s.-one of the main reasons I picked the 830 is because *I* can fix
it....not
true with later synthesized rigs IMO

Folks

I can't be bothered with Ebay so the following is offered FOR SALE
here:

4 off National HRO Tuning Coils, in good clean, working condition.
Pack JB 7.0 - 14.4MHz @US$15
Pack E 0.9 - 2.05MHz @US$15
Pack J 50 - 100KHz @US$10
Pack H 100 - 200KHz @US$10

Payments by PAYPAL ONLY.
Although I am based in norhern Mexico, shipping is at cost FOB
McAllen, TX 78503, USA by USPS Parcel service (probably no more than
US$10 per coil).
Items will be shipped Monday 23rd August 2004.

RSVP to adrian_j_reynolds@hotmail.com

Thanks

Adrian

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Western Union Legless Telegraph Key.....$30 plus Shipping
http://members.cox.net/radiostuff9/wu_key.jpg

Western Union Legless Telegraph Key.....$30 plus Shipping
http://members.cox.net/radiostuff9/key5.jpg

Skillman Telegraph Key.....$35 plus Shipping
Popular Japanese key from the 1960ï¿½s that was imported to the USA
http://members.cox.net/radiostuff9/key2.jpg

Telegraph Key- Brand Unknown.....$30 plus Shipping
http://members.cox.net/radiostuff9/key3.jpg

Telegraph Key with Shorting Switch - Brand Unknown.....$35 plus Shipping
http://members.cox.net/radiostuff9/key4.jpg

Philips 4-125A Power Tetrode Tubes - Pair.....$50 plus shipping
These tubes appear to be NOS. I checked filament continuity and they test good. I don't have the capability to test them but from visual inspection they appear to be new tubes. Here are the specs for the 4-125A. These tubes can be used to build a linear amplifier or a high power audio amplifier.
http://members.cox.net/radiostuff9/4125tubes.jpg

Eimac 450TH/VT-108 Transmitting Tube.....$50 plus shipping
I have checked filament continuity which is good but have no way to test beyond that. the tube is in excellent condition and may well be NOS but I really have no way of knowing for sure. This came from an estate. Specs are shown below.
http://members.cox.net/radiostuff9/450th.jpg
http://members.cox.net/radiostuff9/450th2.jpg
http://members.cox.net/radiostuff9/e450th.jpg

Eimac 25T Power Triode Transmitting Tube.....$25 plus shipping
I did check the filament for continuity and it is OK. No other way to test.
http://members.cox.net/radiostuff9/eimac25t.jpg

Large Precision Multi-Section Capacitor & Dial Assembly.....$60 plus shipping
This almost looks like it came out of a National HRO receiver but it did not. The capacitor contains 8 sections. Each section measures

approximately 85 pf minimum and 360 pf max. The assembly is in excellent condition and would be a neat assembly for a home-brew receiver project.

http://members.cox.net/radiostuff9/cap_assy.jpg
http://members.cox.net/radiostuff9/cap_assy3.jpg
http://members.cox.net/radiostuff9/cap_assy5.jpg

3 Multi Position Rotary Switches.....$35 plus shipping
These are not your standard rotary switch. Two have more than 20 positions. These came out of a military W.W.II static impedance bridge. They look like new but you will need to remove the inductors. The shafts are standard 1/4ï¿½ but they have removable adapters. These would be great for an antenna tuner project.

NOS Cold War Relic - Civil Defense - Radiological Survey Meter.....$75 plus shipping
These are NOS NIB meters painted in Civil Defense yellow with a neat Civil Defense logo left over from the cold war. These were to be used for checking for radiation after a nuclear attack. Includes manual, an original but now dead vintage battery (note the 20 cent price), remote cable (not shown but stored in the unit), and carrying case. A neat collectible for your 1950ï¿½s or 1960ï¿½s station to set by your CONELRAD alarm. I have a whole bunch of these.

types ?
> What are the ramifications involved. Has anyone done this ?
> Pat W

I've used plain 6146's, the 6146A and the 6146B in my Valiant without
noticing much difference.
If I remember correctly, the Valiant was actually designed for the original
6146.
Of course, the neutalization will be slightly different for each tube type,
but you should reneutralize whenever the final tubes are replaced in any
event.

As far as I know, the only difference between the types is the plate
dissipation ratings and slight differences in interelectrode capacitance.

Folks may have had problems due to variations of quality from maker to maker
(especially during the last years of production when quality went downhill),
rather than problems due to different type variations.

Mid-'80's ICOM R71A for sale. Recently removed from sailboat as I am looking for RX/TX capability and this SSB is RX only. It works. It shows no outward signs of any abuse. It comes with owner's manual and some schematics. No AC power cord.

Since anyone interested in such a machine knows its value, I'll ask that you simply make me an offer that will satisfy both of us.

FREE for PICKUP ONLY

These are the chassis' for the following. No
panels, cases, knobs, tubes, or 'high value'
parts - lots of sockets, IF cans, underside
parts, etc. but no crystals, meters or other
stuff like that. No power xfmrs either.

SB-303, SB-301, Gonset GSB-100, Hallicrafters
S-40B, Henry Tempo-One, and Ameco TX-62

They are FREE for pickup in Tacoma, WA - until
Saturday the 21st at which time they go to the landfill.

Thanks

Dave

Add this to the list of 6 chassis' I have for free - just found the cabinet for an S-40 - good shape, just dirty inside and has some grunge on the bottom inside from when the receiver melted down. Easy cleanup, repaint, and restore your radio.

FREE for pickup - take the 6 other BA rigs while you're here - SB-303, SB-301, GSB-100, Tempo ONE, TX-62, and whatever else I dig out in the meantime. ALL of it goes to the LANDFILL on Saturday as I am moving and can't take it with me. Please - getting lots of shipping requests, all of which cannot be accommodated.

Tacoma WA area

TS-830S:
160-10 meters (including WARC) bands
RIT/XIT
IF shift
IF Notch filter
VBT (Variable bandwidth tuning)
Tone (receive audio tone control)
Speech Processor
Monitor (TX audio monitor)
plus standard stuff like VOX,
AGC controls, mike/CW gain, metering controls

TS-530S:
similar, but no VBT or Notch filter
weaker receiver

TS-530SP:
same as 520S but includes Notch filter

If you can afford one, get the 830S. I had a 530S, didn't like it much.

4337. FS: 5 old tube AM radios cheap

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-19 00:18:39 UTC
From: Dave <Devarim@hotmail.com>
Message-ID: <620c7ecb7c4853e458eb5ce9dda1c664@news.meganetnews.com>
Source record: 22300
Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.radio.amateur.boatanchors

Hi all,

Moving forces sale of restoration projects I'll never get to.
I have 5 old wood-case tube radios - one works four don't.
All are complete, in good condition, and FULLY restorable.
Actually, my brother did in fact restore all of them many years
ago but they fell yet again into disrepair. There's a Minerva
AM, Crosley Fiver, Motorola clock face radio, a Philco, and
one other I can't recall. All are TOTALLY complete with all
tubes and knobs, and ALL cases are in very good condition.

First $50 takes ALL of them - BUT you have to take all, and
you have to pick them up in Tacoma, WA I will GUARANTEE
that they are in every way worth ten bux a radio, hands down.
The Motorola clock radio works. ALL are tube radios of course.

Email if interested. If no takers by Saturday, they're off to
Value Village :-) where they'll end up in the 'glass case' for
God knows how high of insane prices.... that place cracks me up!

I also have an Atwater Kent metal (model 45??) radio with tubes,
and a Silvertone metal box radio - make me an offer when you
get here if you want. I have LOTS of other radio stuff, but you MUST
come over to talk about it as I WILL NOT SHIP ANY OF IT.

NO! You are right and I'd have to go back and figure where he was anyway.
Oh, Tacoma. SO??? It's the condescending "take them or I'll dump them
anyway" attitude that gets me. IF he actually reads any of these groups than
he would at least PING Phil Nelson on the other side of the freeway who
could see them and decide if they were of interest or even worth
redistributing to others. It's this DAVE who is the troll. US postal parcel
is filthy cheap to send a CORRECTLY packed AA-5 for less than $25 TOTAL.

I just got two of these units, supposedly they are working and need to be recrystaled.

Anyone happen to know the power requirements for these? Any mods/manuals/schematics?

Thanks! :)

You could try Rec.Antique.Radio+phono or however it is listed. Maybe someone lurking there lives close by.

I might email him and ask what is special about his units and for some pics. Most of my AA-5's of the period mentioned cost me between ONE and 7.50 (those had FM and were from 1951 and 1963). I have some cash but it's geared toward a set repair payment and a Pioneer SX-737 (1974) to grace my 6 channel audio system since my Heathkit died. But really, I need more plastic square spartan boxes like a hole in der noggin'.

and no.

Dave said that he is moving. That's enough explanation. I can
imagine why an old radio collector is moving and not taking his
lower value radios with him, health, finances, there are other
possibilities.

When you move, you run out of time to organize, fix, give away, sell
stuff. He seems to be outa time.

You guys still have the mindset that "my time has no value". Get
past that. Your time has value, call it $40/hour. The several
hours that it costs Dave to package and arrange shipping, even using
mailing services, is hundreds of dollars of his time and time that
he doesn't have. He's moving, remember.

He's solved the focussed market problem that you allude to.
He's looking for a radio person within an hour's drive of his place.

Pennysaver gets him people within an hour but most have no interest
in old radios. Call it a one in a hundred thousand hit ratio.

This is a Worldwide forum but it is targeted to old radio people,
better than one in a hundred thousand hit ratio. The proof is in
the comment, "PING Phil Nelson on the other side of the freeway "

Dave spams a list and one of the complainers knows an old radio guy just down the street? Maybe this "Phil Nelson" will pick up the stuff and help Dave out.

If so, if Phil is listening, I'll take the SB-303 chassis. I restore these things and can always use dead SB parts. Hit my page at www.kiyoinc.com/heathstuff.html I'll cover the shipping and send Phil five bucks for his time.

I seriously doubt you are even aware Phil has one of the more prominent antique radio site on the web then. Might indicate you are in swap as I'm sure he looks at boatanchors and he has a few. No matter.

Has it been over half a day and it would be thought the OP would respond yet hasn't? My strongest evidence that he used keywords to commit a hit-and-run. Like a direct mailer might, only the more outrageous examples are labeled SPAM. In his case not, however I know I would monitor the groups I posted to as posters will reply within the groups anyway. 5-7 of 10 those replies are wasted.

IF he wishes to give Goodwill carte blanche, so be it. I can hope some kid will get the bug and want better, etc. Auctions, thrift stores are great places to start a collection and one hopes these folks are our future? Maybe the thrifts I know will lose the mentality of not handling radios or computers they picked up during the Microsoft antitrust suit. Our auction house has been greatly useful to me. Things like Zenith "porthole" b/w sets, a pre-1951 Motorola AM-FM phono console, early SS radio and tube stereo tape gear, 70's vintage receivers. I have no use for eBay as there's plenty about here.

If you really want to contact him, do so through the website you will now thoroughly enjoy.

http://antiqueradio.org/index.html We try not to give his address directly to counter SPAM, but you should bookmark it just the same.

Thank you most kindly for your thoughtful opinion.

PS I watched a teenager diagnose and almost manage to repair the malfunctioning record changer in a 20 yo Rowe-AMI jukebox today. I feel a lot of hope.

I meant to convey what I see, by all means not what I own. I only wish I had
that TV, but I do have a 1950 Stromberg Carlson 12" chassis without a
cabinet that was a gift. C'est la vie.

Exactly,
When I moved about a year ago I was unemployed due to layoff, hurried
for time, and needed to get rid of nearly my entire radio collection. I
didn't have hours to spend answering questions, packing and weighing
items for shipping cost questions, on and on and on.... I needed all of

it gone with a minimum of hassle. I could have made ~$10K doing it this way but, with everything else to attend to I decided to haul it all to Estes and be done with it. I wound up wit $4K, my collection was spread aroundto other collectors (not dumped or destroyed), and there was a large hassle I didn't have to deal with during a stressful period.

A few years ago a friend passed away and I was to liquidate his estate. His radio/electronics/test equipment collection was offered here for local pickup in my area. Working full time, family, and other obligations prevented me from selling these things piece by piece. Most of it went to 3 collectors who had seen the posting.They came, they saw, they purchased. No hassles. One fellow drove 150 miles and left happy. There were many inquiries from others around the country who wanted descriptions, pictures, shipping details, etc and some of these folks got angry when I told them I would not parse things out and deal with their requests as I didn't have time.Thats why I stated these things were for local viewing and pickup!!. Some wanted me to make an exception just once. There were a lot of requests for "just one" exception. Nobody offered to take their time to drive or fly to Cleveland to see the items, they "did't have the time".

Pete,

Thanks for the reply. I just bought a signal generator and should be
receiving it shortly so I can test it.

I did check the LO and it works fine.

I checked all voltages as listed on the service manual and they match
fine except the voltages on the discriminator tube. They list as 0.25
volts on pins 3 and 5 (I believe) but they are actually showing as
-0.25V. I don't know if that has anything to do with it. Could it be
one of the capacitors in the discriminator coil unit?

Will keep looking....

Thanks.

What a bunch of assholes here! MY GOD! What I do with my
radios is MY DAMN BUSINESS. Where do all of you get off flaming
me just because you don't live in Tacoma Washington? I'll be
go to hell if I'm going to take the time out of my day to deal with
shipping 5 old AM radios! You have GOT to be kidding.

I'm in the middle of selling my home, and getting married in a week,
and run a business and I'm trying to deal with all of this all at the
same time, and pulling my hair out dealing with all the things I have
to do in a couple of weeks.

Unbelievable. And you call ME a troll!!

Some of you folks should be ashamed of yourselves.

And did I mention I have had 9 requests for the radios locally? Not
that it is ANY of your damn business. They're going to a good LOCAL
home and I'm done with it. ALL of your addresses have been
'kill filed' - I just expected more from this group.

Dave

4360. FT: Shock Mount for BC-344, 342 etc.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-20 03:40:13 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <412572A4.7000808@ix.netcom.com>
Source record: 22321

I have the shock mount for the BC-344, -342 etc.
series of WWII ground receivers.
Seeking trade:
Any SCR-274N "command set" item or accessory marked *BOTH*
"Signal Corps U.S. Army" *AND* "Aircraft Radio Corporation."
Photo requested.

Thanks.

Well, Steven, I think you are a full of it, wacko.

It's none of your business what someone else does with their property.

You've only begun to tap this well. He purports to be on welfare and unemployed, and regularly goes on slightly insane rampages in the antique radio-phono group, while continually advertising his poverty. A group I left because it's mainly populated by the lunatic fringe, of which Dinius is one of the more sane members.

Welcome to rec.antiques.radio+phono Dave. Steve Dinius is the group
idiot. If you can ignore him and a few select others it ain't too bad.
There are a few folks that think they own this group. You get used to
them after awhile.

Ah yes, the self righteous, self appointed - all knowing Gods.. Chased more away than they've welcomed in. Nice news group - NOT....
One of the worst on the net for friendly atmosphere. If your thoughts aren't with theirs, you're trash..... It's their way or the highway.
There are a "very few" who are ok. The rest can yank on a donkey's penis.

As for Steve D., yep - I must agree..... a few cans shy of a six pack. But in some ways, he fits right in with them. He's their torment in hell!
Couldn't happen to a better bunch by a better person.

From one who refused to put up with their BULL SHIT.

4374. More AM Phone DXCC found

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-21 05:27:41 UTC
From: David Thompson <thompson@mindspring.com>
Message-ID: <h3BVc.30710$nx2.22034@newsread2.news.atl.earthlink.net>
Source record: 22335

In looking thru my QSL files I found two more DXCC countries I have confirmed on AM phone. I worked YV0D recently and found that I had worked YV0AA in 1962 on 2 way AM. Then I found my JZ0HA card from 1960 on 2 way AM. This brings my AM DXCC total to 263. I reported 261 in the past. Now if I could get a card from FF8AH (later F3VW)...HI I even tried a filled out reply card just requiring his signature but nothing abiout 15 years ago. He was then 80 so he is now probably a SK.

Next is to try and get some of the Dxpeditions to switch to AM (many rice boxes do AM OK). Guess the days of carrying a big AM transmitter are long past.

National Radio SPC-697 Power Supply Speaker
Combo.....$375 plus shipping

This is a rack mount combination speaker, power supply and coil storage box from 1936. This will work with the early HRO, HRO-5 and R-211U series of receivers and possibly a few others. The power supply output is +240 VDC and 6.3 VDC for the filaments. I installed an NOS type "80" rectifier and checked it out with one of my HRO-5TAI receivers. The power supply works fine. The speaker was also tested and sounds great. The coil box will hold five coilsets. This needs new felt as the almost 70 year old felt is in bad shape. I have been a National collector for 10 years and have never seen on of these before. They must be somewhat rare! Unfortunately, I don't have an early HRO to go with this and I have never been a fan of rack mounted equipment.

Don't worry about your discriminator. Your AM detector is working at 455 kc
and should also be working at 10.7 mc. If you aren't hearing any signals
with the AM detector then that almost certainly means the signals aren't
getting to the AM detector.

Here are a few items for sale. Prices do not include shipping. I will
ship overseas.

Heathkit Phone Patch.....$15 plus shipping
Looks good except for 2 holes drilled in the top. Unit is untested.
http://members.cox.net/radiostuff9/heathpatch.jpg
http://members.cox.net/radiostuff9/heathpatch2.jpg

RCA Type LM-1 Multimeter Plus Parts Unit.....$55 plus shipping
This is an unusual looking Bakelite cased VOM which is from the late
1940's and early 1950's. Measures volts from 3 to 1000 ac and dc volts,
1 mA to 1000 mA DC and resistance. This unit is in excellent condition.
Also included is a 2nd non-working unit. The non-working unit has a free
movement. I did open up the inside and it is clean with no evidence or
of abuse or arcing. It is missing the battery cover which is just a flat
piece of plastic.
http://members.cox.net/radiostuff9/rca_lm12.jpg
http://members.cox.net/radiostuff9/rca_lm13.jpg
http://members.cox.net/radiostuff9/rca_lm1.jpg

Vintage Westinghouse Portable DC Voltmeter.....$35 plus
shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are
changed by making the appropriate connections to the meter. The ranges
are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
The instruction card on the inside cover has a date of 1942.
http://members.cox.net/radiostuff9/west_meter2.jpg
http://members.cox.net/radiostuff9/west_meter.jpg

Unknown Microphone #1.....$30 plus shipping
Neat Brushed aluminum housing. Manufacturer is unknown. Needs a new
cartridge which you can probably get from Radio Shack to work.
http://members.cox.net/radiostuff9/weirdmike.jpg

Unknown Microphone #2.....$25 plus shipping
Manufacturer is unknown. This does work and was hooked to a Ranger I
when I got it.
http://members.cox.net/radiostuff9//odd_mike3.jpg

Eimac 450TH/VT-108 Transmitting Tube.....$40 plus shipping
I have checked filament continuity which is good but have no way to test
beyond that. The tube is in excellent condition and appears to be NOS.
http://members.cox.net/radiostuff9/450th.jpg
http://members.cox.net/radiostuff9/450th2.jpg
http://members.cox.net/radiostuff9/e450th.jpg

Eimac 25T Power Triode Transmitting Tube.....$20 plus shipping
I did check the filament for continuity and it is OK. No other way to
test.
http://members.cox.net/radiostuff9/eimac25t.jpg

Eico High Voltage Probe.....$20 plus shipping
http://members.cox.net/radiostuff9/eico_hvprobe.jpg

Books
1995 ARRL Handbook.....$10 plus shipping
http://members.cox.net/radiostuff9/1995arrlhandbook.jpg

ARRL - The Mobile Manual 1962 Edition $8
http://members.cox.net/radiostuff9/mobilebook.jpg

ARRL - FM and Repeaters 1972 Edition.....$6
http://members.cox.net/radiostuff9/fmbook.jpg

Fifty Years of ARRL - 1965 Edition.....$12
http://members.cox.net/radiostuff9/fiftyyearsarrl.jpg

Ham Radio Horizons Magazine - First Issue.....$10 plus shipping
This is the first issue of Ham Radio Horizons magazine which premiered
in March of 1977. This was a spin-off of Ham radio magazine by Jim Fisk
designed targeting beginning and new hams. This issue is in excellent
condition inside and still has the mailing cover over it. This mailing
cover is a duplicate of the front cover. The back side has a handwritten
address along with 26 cents in US postage.
http://members.cox.net/radiostuff9/hr_horizons.jpg

Thanks for looking.

Dave has issues? I didn't think so. Even before he expanded
on his situation, I saw a guy who was packing up his stuff and
thinking, "gack, do I really want to take these AA5's with me, and
those stripped chassis, and that thing over there too."

Well, I have a shelf unit with old radios on it. SB-303's, an
SX-100, and a Collins 75S-1.

The SX-100 came from a local fellow who, like Dave, issued a
"come get this for FREE or it goes to the landfill" ultimatum. The
next sound was a drag-race start and squealing tires. He hadn't
used it for years, had a new all-band ICOM, and wanted it outa
there. He even helped carry it to my car, and later when I
mentioned that one of the bright disks was missing, made a replica
on his lathe.

It works. I've listened to 75 meter LSB and 40 meter CW with it.

The 75S-1 came from a Silent Key, I paid cash money for it but
nothing like what it would bring on eBay. Similar story, the
word went out for a local pickup, firm price please. I'm gunning my
car, racing to get to the guy's QTH, with an envelope from my coffee
can, cash, twenties.

The fellow tells me the whole story, illness in the family, future
move, near retirement, treating radios with respect and care. I
count out the cash and *he* carries the 75S-1 to my car.

Did I see a tear in his eye as I closed the trunk?

The 75S-1 has some minor problems. I put it on my Tektronix scope and the 40-40-40 main cap is soft as is the other 40 cap. Your main cap would be soft too, if you were as old as this radio.

I can bring it to spec with tacked on caps in an hour. I'll be attempting major surgery, refilling the aluminum can, that might take a few hours.

It came with the 500 Hz filter, 312B-3, and the original manual. If I put the filter, speaker, and manual on the Bay, the radio would be FREE.

If I put this 75S-1 on the Bay, it should set a price record. It is unmodified, has the rib-S-meter, and are you sitting down, a TWO DIGIT serial number. This was part of the first run of 75S-1's. I believe that the 75S-1 was the first S-Line.

To a collector, of all the tens, hundreds of thousands of machines called S-lines, 75S-1, 32S-3A, 30S-1, KWM-2A, 75S-3C, 312B-5, this is the start, the beginning. The radio world changed when this radio, and the couple hundred like it, came off the line.

Gotta have happened, Art Collins, the S-Line designers, the VP of manufacturing, the chief of Quality Control, whoever all those people are, must have been on the factory floor when Collins built this specific radio.

Somewhere out there, there are probably 75S-1's with ONE digit serial numbers. Where is radio #1? Who has it? What about #6?

Guessing that the factory built batches of 100 or 200, this may actually have been built before one stamped #1.

Whatever.

I ain't selling it. This winter, I'll be fixing up the caps and it will have a place of honor on my operating position.

4389. regency rh-250 to 2 meters

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-23 16:53:08 UTC
From: gobo20@lycos.com
Message-ID: <f6a54aa0.0408230853.14ca0d41@posting.google.com>
Source record: 22250

has anyone modified the regency rh-250 to 2 meter use?
the manual says that a minimum of 7 volts is needed out of the vco.
i'm only able to get out 4. i'm sure L201 needs to be changed, but
regency did not publish the value of this coil and relm no longer
has any engineering info. anyone changed this coil to get out the
required 7 volts from the vco?

thanks.

4390. WTT/FS: Drake C Twins and TR4C for Swan 600R/600T

I have for sale or trade a nice set of Drake Twins. I have an R4C and T4XC
is very good condition. The R4C has no modifications. I have the manuals
for both of them, but you'll have to come up with your own interconnect
cables to use them in transceive mode.

I also have a very nice Drake TR4C, AC4/MS4, and manual that I'll include in
the swap for a near mint condition set of Swan twins.

I'd really like to do a swap, but I'll also sell all 4 pieces of Drake gear
for $795 plus shipping. If you're interested I can also do an on the air
demo of this equipment for you in the general portion of any band except
160.

Please email me at jcamp2@cox.net.

73,
Jeff

Got carried away at the Antique Wireless Assc'n convention auction
and inconsideradly came home with a project...a Narco Aeronautical Corp.
VHT-2 SuperHomer. It looks complete and not especially damaged. Narco
Corp's website has this radio on its list of no longer supported units.
Anyone have an operation and/or service manual, or know anyplace like
the BAMA site where a scan could be downloaded? I have no intion of
flying with this radio, merely restoring it for gound listening to the
RCVR.

You might try your local general aviation airport avionics (radio) shop.
Or pick up a copy of Trade-a-Plane at the same location. Many shops
ad there and you may find a contact. I checked my old Narco file but no
VHT-2.

Well you never know what might be in the junk pile. I looked in my
collection and found a VHT-3
and a manual for it that includes info on the VHT-1 and VHT-2. So if
the original poster has some
questions I might be able to answer them. The schematic is a two page
fold out.

This is a Radio Shack part number.

Cheap walkie-talkies on the CB band were very popular until the late
eighties, I think, when the 49 MHz band opened up for this sort of
thing. Most of them are not very useful because they do not have a
squelch.

>Circuit:
> Receiver Section: ..... Superhetrodyne with crystal

>Dimension: ..... 6" x 2 5/8" x 1 1/4"
>Battery: ..... 9V standard battery

This appears to be better than most of them if only because it has
a superhet receive section. Where did you get these specs? Ask
Radio Shack for the schematics.

I doubt these are worth anything. When I was a kid people used to
move stuff like this to 10M AM, though. Invariably the modulation
levels were way low on the things.

4398. Replacing FETs in a 1970s vintage receiver--Need Advice--What is "Noise Figure" and "Gain" in regards to specs?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-24 13:17:50 UTC
From: "O. Alvarez" <omar27@bellsouth.net>
Message-ID: <ndHWc.13850$N11.4797@bignews5.bellsouth.net>
Source record: 22259

I'd like to replace 3 2SK19 FETs in a 1970s vintage solid state AM/Shortwave receiver to see if it improves reception and overall performance. When looking around the web for possible replacements or substitutions, I compiled the list below (not sure if they are all compatible, but they look like they should be).
Should I try to replace strictly with the same part number or should I try to improve the performance by choosing a "better" FET. I know how a FET works but I am not familiar with the specs listed below each type. For example how does Noise Figure and Gain play into the performance (Sensitivity) of the receiver?
I'll take any advice, suggestions or links to sites that can shed more light on this topic...

By the way, I didn't want to xpost this message, but if there is a better newsgroup to discuss this on please let me know. Thanks.

Generally speaking, noise figure of a front end on an HF receiver, isn't of much consequence. The HF bands are so noisy that most any modern FET will be orders of magnitude quieter than what is required.

You might be able to get some improvement by finding a fet that is somewhat higher gain, but I doubt it. Most likely, all you will succeed in doing is creating an oscillator.

Where you can really improve things in HF receivers is to make sure that the RF preamp is capable of very wide dynamic range, ending in watts of power at the mixer. Then pick a good high level DBM that can handle a watt or so of RF power without excessive compression. This will give you a receiver that can handle high power adjacent channel signals without losing an on channel weak signal.

Some of the best transistors for this kind of RF service are the VHF bipolars that are used as cable drivers on cable TV systems.

But most of the time, the walkie talkies available to convert had superregen receivers, and the transmitter was more or less making the superregen stage a crystal controlled oscillator. The low modulation came because one was using a speaker for the microphone, and there was a mismatch along the way. Every so often, you'd see a bit of filler in the magazines talking about this, and suggesting wiring in another transformer.

This may not apply with one using a superhet receiver. I can't say I've ever seen a schematic for the transmitter in one, but since they have added enough to make a superhet receiver, they may not be skimping as much and the modulation levels better.

Somewhere around here I have a Lafayette unit that has a superhet receiver
in it. I bought it at a hamfest in the seventies with the intention of
modifying it, found out that it was broken, and it's been sitting in the
inbox since then.

In the latter 70s I had a Kenwood R599 that was absolutely terrible in
regard to overload. There was a short article in one of the ham mags of
the era that suggested replacing the front end FET with a newer device.
I don't recall the device numbers and haven't been able to locate the
article again.
The difference was remarkable. Before, I was completely blanked by a
fellow ham about 2 blocks away, afterwards I couldn't detect that he was
on the air unless I was tuning close to him on the same band.
It was a very worthwhile replacement and I wish I could find the article
again to see if it could apply to some of the other late 60s/early 70s
receivers that were so lousy in this regard.

Joe -

A GC-1005 clock appeared on eBay last week and I did some research, since it had a display problem that I passed along to the eBay seller.

As you know, the Heathkit GC-1005 clock uses the Sperry SP-352 displays. The displays in this series are raised-cathode, planar-gas-discharge displays.
This particular model number is 2 digit decimal with decimal. Analog Services is a good first telephone call for the replacement part.

Analog Services, Inc.
1169 Haynesville Road
Reynolds Station, KY 42368
270-276-5671
e-mail addresses on this web site
http://www.logwell.com/contact/index.html

Analog stocks the Sperry / Beckman / Babcock plasma (neon) displays for SIE / Computalog digital readout surface panels. We have the SP-736 / SP-332 and the SP-324 (digital line power module only) for the NIM modules, and the SP-756 / SP-352 for the older Slim Line a/k/a Thin Line panels. They also stock the hard to find high voltage display driver integrated circuits (chips), DD-700 / DS8880 / SN75480 / ECG2028, used with plasma displays.
http://www.logwell.com/capabilities/stock/displays.html

Analog also has a sister company - Scarce Components - for those hard to find discontinued or obsolete transistors, ICs or other parts
http://www.scarcecomponents.com/

Babcock Display Division still makes these displays (But they are not cheap), UNFORTUNATELY BABCOCK CAN NOT LONGER SUPPLY THE DRIVER CHIP.
http://www.babcockinc.com/babcock/display.home.html

Raised Cathode, Digits
SP-352
7 Segment, 2 Digit, Raised Cathode

Technical bulletin
http://www.babcockinc.com/babcock/documents/doc_generator.asp?doc_id=2700&attr_index_id=491

SPECIAL HANDLING INSTRUCTIONS FOR SP-352 DISPLAYS
MOS circuit components in this assembly are susceptible to damage from static electricity and high voltage transients. A shorting pad of conductive foam has been installed across the interface connector. The shorting pad should not be removed until the terminating connector is wired and ready to be connected to the assembly. The interface connector should always be terminated with either the shorting pad or the terminating connector. DO NOT TOUCH the interface connector with fingers or tools in the absence of the shorting pad or the terminating connector unless properly grounded. The data connector should not be connected or disconnected while power is applied to the unit.

Good luck !!

Thanks Greg
Good GOSH some of the price quotes I'm getting on these. $45, $65+ ea
The guy next door worked for Sperry Rand, he had a draws full of
stuff.....gave them away in January!
About 1000 were liquidated about 3 years ago when Sperry closed its doors
after Clinton killed there contracts here in Long Island (New Hyde Park)

I may just put it up for sale here and build a LED clock with backup batt.
This clock works (flickers) the seconds display is dead, (works when you
swap the display's)
What a bummer

HT-32?

Could this be what I call an "11 pin octal". Looks just like an octal--
center, keyed insulating pin--, but with 11 pins?

I have 1 or 2 lying around somewhere. e-male me.

Joe -

Tough choices. The displays do have a specific usage life (50% brightness considered time to replace)

If you restored now, would be a collectors item (see the number of Nixie tube clocks being built). I really like these displays (warmer than LEDs and not like Nixies) and at least Babcock is still manufacturing the display. I do not know what Heathkit used in the 9180s for a driver chip (if they used the Sperry driver chip).

Your neighbor could have been a millionaire by now.

Bill -

Amphenol still makes the 86 series of connectors that were used on amateur radio equipment (e.g. Collins, Heathkit) as well as Leslie speakers for Hammond organs and other audio equipment.

Triode Electronics here in Chicago, IL has stock. Ted Carlson is the owner, call him for specific needs !
http://store.yahoo.com/triodeel/index.html

Here is the Triode web page for the Amphenol 86 connectors (plugs, sockets and nice cable covers)
http://store.yahoo.com/triodeel/amphenol.html

What a bummer, out of all the junk in the house this is what I liked
At this point I'd have to go $50 a pop or play Ebay games for parts units.
Im putting it up for sale $30, also have a Heath HM-15 SWR meter some ninny
drilled 2 holes for mounting under a shelf $25 (email me for photos)
Scopes and stuff here http://members.bellatlantic.net/~vze2pdtg/home.htm

Thanks for all your help
-Joe Remove (NOSPAM)

meter w/original manual. ... NOS B&W model 300 longwire low pass
filter ... Jackson 598 tube tester in very good to ex.cond. ...
National HRO 3 coil,coil box. Has crack on one side ... BC-221-N
Freq.meter made by Pholco. In pretty nice cond.overall. Looks
like it has a HB P/S. ... "

> 73 Stan

I'm not slamming Stan but, well, these are not what
I'd call choice pickings.

It appears that the more interesting boatanchors are vanishing into
private collections, or maybe are just being tossed out.

I'm offering a complete PRC-77 radio set in excellent, fully
operational condition. The radio itself near-mint. It's been
aligned and checked and is guaranteed functional. I've included
the best of the accessories I have with this radio.

1 ea. PRC-77 R/T unit, almost new-appearing, guaranteed functional
1 ea. ST-138 carrier/straps, unused/unissued
1 ea. CW-503/PRC-25 carry bag, unused/unissued appearing
1 ea. AT-892/PRC-25 short whip (gooseneck plus tape section),
excellent
1 ea. H-250 handset, used excellent
1 ea. AT-271 sectionalized long whip, used excellent (getting tougher
to find)
1 ea. AB-591/PRC rubber base for long whip, used very good condx
1 ea. Battery, BA-5598, lithium primary (for a little instant
gratification)

My boatanchor rigs consist of a KWM-2, a TS-820, a Johnson Valiant and an HT-32. All the rigs except for the KWM-2 will occasionally conk out and need repair, but the KWM-2 never does. I have been using that energizer bunny of a rig every day for about 10 years now. All it has ever needed was a new driver and 6146's.

Well, they could be the gold "top hat" style. I have some of these at these ratings .. that some restorers prefer (cosmetic/authentic look) versus the standard black case.

Is it just me or is everyone else tired of seeing KF2GG's (ritchi50)
constant barrage of FS ads of the same gear over and over and over? And he
does the same thing here and in rec.radio.swap and QTH.com. I don't think
it's going to help you KF2GG, you are just annoying people.....
(Not trying to be anal here Ritchi50, but you are hammering us daily - it's
like water torture)! We know what you have for sale and I can understand
relisting maybe once a week, but every day? Please, don't be insulted, but
can you give it a rest for a day or two?

4439. FS RCA Channel Elements and more

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-27 09:08:12 UTC
From: "L." <FFSTA17NO@SPAMACCESS995.COM>
Message-ID: <xSCXc.342$Ae.31@newsread1.dllstx09.us.to.verio.net>
Source record: 22200

Hey folks, if any of you have any RCA gear - which is some real boat anchor gear about now - and need some Channel Elements, I have a handful. They are mostly UHF, but if memory serves me correct, there "may" be a VHF High and maybe even a Low in there. ALL were removed from working equipment when it was being replaced with newer gear.

There's at least 8 of them. You can have them all for $15 plus shipping. Any 3 of them would be worth that, if you're in need of them. If interested, E-mail me direct by removing "no spam" from e-mail.

I also have a Mocom 70 Cable and Control head as well. No mic or speaker. They did work when last used.

I have some other odds and ends too.. If you need some older parts, etc.. ask, I may have them. ALL items being sold AS IS, even if new. Looking to clear out radio repair shop and shack in preparation to move. Most stuff is going cheap.

Thanks,

Lou

No. just the VHT-2. I bought the manual from the Essco
site. ($12 plus minimum UPS) It arrived yesterday without the
schematic. I e-mailed them last evening to tell them that and my e-mail
return this morning had a PDF of the schematic with it. So I now have
the complete manual for the VHT-2, but data on the rest of the series is
not included.

Source record: 22211

Ok, so I bit on ebay for a wwII morale radio (or its a look-a-like). Its built like a rock house. It has a metal face and cabinet, BC, sw from 5 to 15.5 in two bands, two position tone switch, on, off, radio, phono and a 5 1/2 foot whip antenna. The badge on the front says "The Pan American Tropical". Chassis has no numbers or markings (there is a glue mark that looks like it had a model etc pasted to it at one time, kind of a glue outline) The cabinet has a 184 printed in rubber stamp style on the back. The set is 7 tubes (eye tube include) and has sockets for 7 additional tubes as spares (that's what the sockets are labeled "spares")
There are three transformers 2 from electronic engineering and 1 from Crosley. The tubes are all different brands and most say 6-23-63 written in pencil....

I am looking for a schematic or any other info.

The reason for this purchase is that my grandfather had a radio that he described like this one. It may have been a tropic master, but for what I paid for this one,,,oh well!!! Gramps has passed, but I think it would be neat to tune around the dial like he did back in the day....

Bob in phx.....

for more info on my grandfather see

http://www.dot.state.mn.us/aero/aved/museum/halloffame/klimek_peter.htm

Bill -

You may wish to "Bookmark" (Netscape) or "Add to Favorites" (Explorer) some
of these web sites with your web browser.

FIRST, start with the manual, which is available on BAMA (you will need DJVU
reader)
ftp://bama.edebris.com/bama/hammarlu/hq129pdf/hq129xpdf.djvu

HQ-129-X Spec Sheets (2 pages - takes a bit of time to load)
The schematic on the second page is actually too small for troubleshooting
http://www.hammarlund.info/info/hq-129-x/129-x-1.jpg

http://www.hammarlund.info/info/hq-129-x/129-x-2.jpg

IF you are missing knobs, I believe that Leeds Electronics (NYC) actually
has the crank tuning knob for the HQ-129-X (here is photo)
http://www.leedselect.com/images-odds/Knob-Crank-metal.JPG

SECOND, take an inventory of the capacitors in your radio (schematic and
inspection).

THIRD, read the various re-capping web sites and references (below)

FOURTH, come back and ask questions before proceeding!

CAPACITOR WEB SITES for reference purposes

Just Radios (Dave and Babylyn Cantelon) - ABCs of Capacitors
http://www.justradios.com/captips.html

http://www.justradios.com/capacitors.html

The Radio Beginner - Replacing capacitors
http://antiqueradio.org/recap.htm

Small radio example of before recapping
http://antiqueradio.org/art/farn03.jpg

and after recapping
http://antiqueradio.org/art/farn04.jpg

Example of a total rebuild of a Hallicrafters S-38, photo documented by John King
http://www.schmitzhouse.com/Johns_Electronics_08.htm

Antique Electronic Supply - for other parts
http://www.tubesandmore.com/

REBUILDING CAPACITORS

Electrolytic Capacitors (lots of photos !)

Early Television restorers
http://www.earlytelevision.org/electrolytic.html

Tim Reese on capacitors
http://www.nmr.mgh.harvard.edu/~reese/electrolytics/

R390A Capacitor rebuild
http://r-390a.us/filter_capacitors.htm

AeroVox - when you want new !
http://www.aerovox.com/

Drake AC-4 Power Supply Electrolytics
http://www.wb4hfn.com/DrakeArticles/TechTips/FilterCapacitorRebuilding.htm

Rebuilding Paper Capacitors
I only recommended this approach for historical restoration work - Smithsonian
quality!
http://www.earlytelevision.org/capreplace.html

Hope it helps

Hello Everyone,

First I would like to say thank you to those of you that read my original post and visited my new web site. I also appreciate all the feedback and comments that I received.

Based on that feedback, and since my web site is still new, I have decided to allow members to post a free photo ad. You can use this free ad to advertise your radio gear for sale, post a want ad, or even advertise your eBay auction item.

While you're checking out my new web site, please be sure to sign up for the free door prize drawing. The first door prize drawing will be held in October and one lucky registered member will win either a new ham or CB radio.

To learn more about how to get a free photo ad and to read the rules for the free door prize drawing, please visit http://www.onlinehamfest.com .

Please also tell a friend about my new web site or add a link to your web page. I could really use everyone's help in getting my new web site off to a good start. :)

Tnx es 73
Dave, Zed Zed

Don't think that crank knob is for the HQ-129X. It looks like the one
for the BC-348?? Unlike most other Hammarlunds, the 129 has a smooth,
smaller main and bandspead knob. The 120 and BC-779 (et al) have a
smaller fluted knob. Larger knobs came in on the HQ-140. I'll also
add Mouser for the caps. They're a bit cheaper, at times, than Antique.

>

Joe -

The 91-MC4M connector was originally made by Amphenol.
In the 1980s, Wire Pro (WPI)acquired several of the commercial product
lines from Amphenol.
http://www.wpi-interconnect.com/salem.htm

The 78 and 86 Series of Commercial Plugs and Accessories as well as the 80
and 91 Series Microphone Connectors were two of these product lines acquired
at that time.

WirePro has the normal distributors: Allied, Newark, Arrow and ECCO
(Chicago)
http://www.eccochicago.com/ecco/index.asp

This surplus company says they have 580 in stock and the price is less than
$ 10) !
http://www.electronicsurplus.com/commerce/catalog/product.jsp?product_id=68641

Newark On-Line (just down the road from me) says they have it: Newark Part
number 39F016 -- and over 500 in stock at $ 10.58
http://www.newark.com/NewarkWebCommerce/newark/en_US/support/search/searchResults.jsp?QTex
t=39F016

This price is definitely from the audio (gold plated) audience = $ 26.00 !
http://www.oaktreeent.com/Vintage_Style_Microphone_Cables.htm

Ken's Electronics wants $ 16.00 for his connector (no wonder early CB died)
http://www.kenselectronics.com/lists/micplug.htm

HF Linear Amplifier 80-10 meters single Eimac 4-400 with
separate RF Deck and Power Supply.
Nicely built the RF Deck looks like a Henry.

Output is adjustable with a simple change in value of a grid resistor.
Spare Eimac 4-400 NOS - tested however no hours,
both tubes in great shape.
Prefer pick up - the powersupply is heavy. $275

Pictures Here:

Hank-
Alas, Houston has become a wasteland for electronics scrounging from what I've been able to tell.
The EPO outlets used to have a reasonable amount of miltary and commercial surplus, but they've become commercialized towards computers, and the other garden variety electronics stores only carry the traditional stuff. Fry's is pretty cool, but obviously no surplus. Madison Electronics used to be the cats meow, but that was many years ago.

I assume you've heard of dallas' 1st Saturday sale, which occurs this coming weekend.
http://www.firstsaturday.com/ it's become computer-centric, but most of the electronics stuff (i.e. ham) start setting up around 7:00AM in the back area.

Also Ft Worth has Nortex
http://www.montagar.com/~patj/nortex.htm
Which is waay cool to browse, but don't expect to find any incredible finds or deals.

Too bad Houston isn't more like Dallas wrt surplus goodies.

regards
-dave

4467. BC-312/342 SO-94 Connector (the front "snoz")

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-29 17:06:48 UTC
From: skidder@eskimo.com
Message-ID: <cgt2f8tbl1@eskinews.eskimo.com>
Source record: 22228

I am restoring an old (1937) BC-312 and need the front panel connector.
The TM 11-850 manual refers to this as a SO-94. The Signal Corps
number is SC-D-2592.

All the surplus conversion guides say to remove this as it is "ugly" but
the original BC-312s had NO rear connection.

Send an email if you have one.

Thanks.

They've been available on ebay before, but not it such a large
quanity at one time. I'm guessing these coil forms were made with
different slugs, since I've seen an old HB receiver project that
used them in the front end from 80-10 meters.

In fact the HB used Part # 74001 coil forms which Millen showed
useable to 35mhz. So the 74004 forms may be a bit rare.
Part number 74002 was supplied without the iron core.

Guess the 74004 coil forms are useful for IF transformers
and the 74001's are for receiver front end coils.

Well its that time of year again, and school has started.

Middle schools, high schools and youth organizations (e.g., 4-H, Boy Scouts, Girl Scouts) often look to their communities for assistance in developing "experiential"
learning programs and knowledgeable volunteers.

Electronics and computers are often at the top of the lists for external assistance by these educational organizations.

If your assistance is asked for, one of the biggest stumbling blocks that you may face is gathering the proper educational materials
or developing actual projects for these organizations or groups.

One web site that I would highly recommend is the Electronics Club web page. This web page was designed by Mr. J. Hewes for the students (pupils) at the Kelsey Park School (UK).

Electronics Club - Kelsey Park School
http://www.kpsec.freeuk.com/index.htm

The AmQRP / NorCal Keyer Kit is also a possible kit for educational usage
http://www.amqrp.org/kits/NCKeyer/index.html

I already received my request from a new middle school teacher 2 weeks ago !

4471. Help with repairing Kenwood and Heathkit radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-29 20:30:55 UTC
From: ke6cvh@yahoo.com
Message-ID: <69f2e60c.0408291230.5ea0ac2b@posting.google.com>
Source record: 22232

Hello,
I am an Electronic Technician Chief in the US Navy overseas. I have two broken radios in need of repair and need some help.
1) Heathkit HW-5400. I bought this off of Ebay and it sat for a couple of months while I was on travel in the shipping boxes. Finally, I got it out and plugged it in. It had power going up and down with VSWR fluctuating. This was odd because my other radio (Harris) had zero problems on same frequency and antenna. After a couple of minutes of this it went kaput! Never even had a chance to get on the air with it. I'm guessing the final or drivers? I have origional assembly/tech manual from Heathkit. Any help in ordering finals or ID'ing what part to buy would be great. It had 3 RTO electronics repair stickers inside when opening and one of these stickers showed it had been repaired right before I bought it. I emailed RTO with zero response.
2) I have an old Kenwood TS-140 with PLL problem. I saw a couple of posts about a capacitor that may go out on a different Kenwood model and recommended replacement. I have a tech manual on this and any help with what capacitor to replace on the TS140 so I can get this back up would be awesome. Definitely a PLL problem as I get the decimal points and then when I move the VFO frequency display temporarily comes back and then goes back to decimal points.
Regards and advanced thanks for any T-shooting help,
ETC(SW/AW) Mike Kendall, IT9/KE6CVH

Mike -

RTO Electronics is owned by Ron Oxley and I have forwarded your inquiry to
him.
There are specific Internet groups for HeathKit equipment. In fact, one
group has over 760 members worldwide.

One group is on the city of Tempe, AZ web server - as well as its archives

Subscription control - http://www.tempe.gov/lists/control.asp?list=HEATH
To post - HEATH@LISTSERV.TEMPE.GOV
Archives - http://interactive.tempe.gov/archives/HEATH.html

The HW-5400, if I remember correctly was a "joint Heath and Yaesu" endeavor
and shared some part, etc. with a specific Yaesu model.
Cleaning the rotary switch wafers seemed to be regular maintenance.

HW-5400 notes
http://www.pestingers.net/HW5400_factory_mods.htm

http://www.eham.net/reviews/detail/330

Regarding the Kenwood TS-140 .. your first source should be the Kenwood Radio (Amateur radio division) web site
http://www.kenwood.net/

Downloads (Support Menu)

All of the Service Bulletins for this radio are on file (archive)
http://www.kenwood.net/indexKenwood.cfm?do=SupportFileCategory&FileCatID=1

The specific service bulletins (jpeg files) for the TS-140 are:

ASB0928
ASB0929A
ASB0929B

You may ALSO wish to look at the TS-680 notes, since this is largely a TS-140 with 6-meter added.

The TS-430 and TS-440 had well known PLL issues (these are in the service bulletins, such as ASB0974A/B)
You should also check the diode switching

MODS.DK by Erik / OZ2AEP is all about the presentation of information available
Much of its content is from manufacturers service bulletins,
and user reported "mods" - untested (Erik admits that he is not an electronic tech)
http://www.mods.dk/view.php?ModelId=517

eHam.net reviews are also good in understanding specific histories with various models
TS-140 review
http://www.eham.net/reviews/detail/716

Hey Henry:

I was told last week that in Missouri City is Charlie's Airwaves. He sells renovated antique radios and he supposedly has some interesting surplus. If I recall correctly Missouri City is South of Houston on I59, about 15-20 minutes. If I can find a map I will try to find out if this is correct and post it.

His card I have here says C.B.s, Antennas, Stereos, Microwaves, TVs, Satellites, RV parts, Accessories.

2547 Cartwright Rd.
Missouri City, Texas
281-499-5214

There is also O&E Electronics on Shephard about 3 blocks south of the North Loop 610.

713-880-3055

This place is a major mess, but he does have a lot of odds and ends. He has a large rack of used test gear. Also has a lot of NOS tubes, but a bit pricey. He has tons of Sam's for sale. They mostly have parts for repairing old TVs and VCRs, etc. Lots of weird ICs.

Vintage Sounds sells antique radios and phonographs. They are the HVRA crowd. Lots of interesting pieces, all restored. Also have lots of tubes, some books, records, very few parts except parts for acoustic phonographs. They have horns, reproducers, knobs, etc. 713-468-4911. In the Hart Antique Center on Fondren about 1/4 mile south of Westheimer. On the right when heading south. Open till 6, 7 days.

The other EPO is right down the road from Vintage Sounds, on Fondren. Just keep heading south past the elementary school, it is on the left about another mile. Go through the light at Richmond when heading further south on Fondren.

The Houston traffic is much easier before 2pm. Happy Hunting, Mark

I watched a 16 year-old nearly fix a tough mechanical problem with a
Rowe/AMI stereo jukebox and he was halfway there towards fixing my IF coils.
Bite your tongue.

HK: To get to Missouri City go south on 59 and
exit Texas Hwy 6 (a few miles outside city limit). Turn left on 6 and go a
few miles. This map shows that Cartwright intersects Texas 6 as Road 3345.
Turn left on 3345. If you get to Road 1092 you've gone too far so do a 180
and go back to 3345. You may already know where it is. Good Luck MH

This will become an increasing problem in Yerp when the
WEE Waste directive takes hold - no company will be able to
dispose of old electronic eqpt other than through a licensed
waste operator, who must in his turn be able to show that he
has passed it on to similarly licensed people.

Scrap electronics will become a thing of the past for the enthusiast.

I have located some large neon bulbs, the ones that were in very early tube testers, they are about the size of a refrigerator light bulb, I found both bayonet mount and also screw in type. They are GE new old stock.

here are the specs on the bayonet mount ones

type NE-36
GE brand
105-125V
base: BA15d - Double Contact Candelabra Bayonet
2 Watt
External Resistance 3500 ohms

here is a data sheet I found with some measurements which appear to be correct
http://www.donsbulbs.com/cgi-bin/r/b.pl/ne-36.html

here are the specs for the very similar looking candelabra base (screw in ones)

type NE or also known as NE-34
GE brand
105-125V
base: E26 - Edison Medium Screw (like a standard light bulb)
2 Watt

here is a data sheet I found with some measurements which appear to be correct
http://www.donsbulbs.com/cgi-bin/r/b.pl/ne-34.html

I also have a lot of other neon bulbs such as NE-16, NE-30, NE-48, NE-51 etc.if anyone would like to buy any before I put them on ebay
also will trade for NOS GE NE-45 neon bulbs

if you are interested, email me at cacheoverflow@yahoo.com

cheers!

wild bill

Computers (or more likely computer games) might be at the top of the
list, but kids nowadays don't seem to give a f**k about electronics in
general. Hardly surprising, given the superficial garbage we force
feed them via TV, film and "newspapers."

This from a summary of the WEE:

"The Waste Electrical and Electronic Equipment Directive (WEEE) aims to minimise the impacts of electrical and electronic equipment on the environment during their life times and when they become waste. It applies to a huge spectrum of products. It encourages and sets criteria for the collection, treatment, recycling and recovery of waste electrical and electronic equipment. It makes producers responsible for financing most of these activities (producer responsibility). Private householders are to be able to return WEEE without charge."

Sounds like they are concerned with the same mess we have here with computers and cells phones ending up in the dump.

Other WEEE info indicated that they are mainly concerned with dangerous chemicles in batteries, etc. It does sound like the inspection process would drive up the price of everything.

If they are trying to minimize the buildup of electronic waste as disposal sites they would probably encourge surplus dealers to take what they could sell. There is a limit to how much the dealers could pay for it. MH

Although I tend to agree with you about the interests of the younger generations, I also have to remember that my parents were probably worried that all their kids wanted to do was mess with them radio gadgets, and who would the world depend on to machine ball bearings? Somehow life stumbles on, and who really needs precision ball bearings anymore? We can use adaptive software to fix the vibrations!

4495. CollinCollectors Association First Wednesday Night Sept 1st!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-08-31 11:49:07 UTC
From: WA9VRH Larry <wa9vrh@mtco.com>
Message-ID: <41346513_5@corp.newsgroups.com>
Source record: 22106
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.amateur.misc

FIRST WEDNESDAY AM NIGHT !!! Sponsored by the Collins
Collectors
Association.

Cedar Rapids, Iowa - Wednesday Sept. 1st on 3880 kcs
at 7:30PM local East
Coast time marks the start of the latest chapter of
First Wednesday AM
Night, drawing hundreds of vintage stations from
across the country.

The event is anchored by a "tall ship" AM station in
each time zone. The
East Coast will run for 90 minutes in response to the
tremendous
participation in the Eastern Time zone. The remaining
time zones will be an
hour. We encourage stations to check-in on AM using
Collins and other
transmitters, new and old. It's an opportunity to
revel in this nostalgic
mode, enjoy giving vintage equipment a "run," and
sharing some storytelling
about classic vacuum tube homebrew and commercial
designs. Typically more
than a hundred stations take part in the evening's
coast-to-coast AM event;
by the time it concludes at 10P, PDT (1A EDT).

A logbook of check-ins, with the equipment used,
appears in the
"Announcements & Events" section of www.amfone.net on
the page's "AM Forum -
BBS."

In months past, anchor stations have included those
running the beautiful
Collins 300-G, pictured below, as well as those
running the amateur KW-1,
and other noted models.

http://www.amwindow.org/pix/jpg/300g.jpg

LISTEN for the following anchors and stop by to say
hello, won't you? You

don't have to be running Collins or vintage gear to be
welcomed into the
group.

7:30P-9P East Coast Anchor: Joe N3IBX

8P-9P Midwest Anchor: Tony W9JXN and Jim W0NKL

8P-9P Rocky Mountain Anchor: Jim WA0LSB in Larkspur CO

8P-9P West Coast Anchor: Bill N6PY in Palmdale CA

These look a lot like old lighting chokes for AM broadcast radiators.
Used to prevent disruption of the base impedance by the light wiring
crossing the tower base.

They seem to seel in the $300 range. One thing I do know- most of the parts-
displays etc are unobtanium.

Charlie's Airwaves is over pirced on almost every thing. Nice place to go and look & repair prices are not that bad. I remeber when the EPO Houston use to sell alot more surplus stuff that was like 3 years ago. Now the only surpul stuff they have is some computer stuff batteries power supplys and generators. I like the epo back in the day not it is just good to go & look you might find something you need. I am also looking for a good surplus electronic store within about 50 or so miles of Houston anybody know of any good ones.

Does anyone have access to a Ham Radio Magazine Dec 1969 article regarding a Swan 250 modification (page 84). If so could I either get a copy or info on what this mod is? Working on a Swan 500CX whose manual has a note that this modification was made - there has been a modification to use alternate 1st and 2nd IF tubes, 6GM6s versus the stock 12BA6s - is this the mod discussed on this article?

Many thanks, Bob NB3W

For sale at the Shelby Hamfest.

Navy Korean War era AN/FRR-22 receiver.
.25 khz 8.0 mhz. Works great.
Package includes:
AN/FRR-22 receiver with power cord, condition 9-9.5
Very rare service separation cable CG1101/SRR
NAVSHIPS 92211 Instruction Book.
Box of about 30 spare tubes.
Rack mount panels.

$400.00 OBO

I will be at the Shelby Hamfest Friday and Saturday.

73, Ron

If this would force the manufacturers, particularly Chinese ones, to
pay more up front to cover the environmental impact of their
products, then it is a good thing, even if it means consumers will pay
more as well.

For too long, importers of this cheap crap have been permitted to
operate with scant concern about where their products will ultimately
end up. They have been able to price their wares artificially low
because the true cost of manufacturing and ownership is not borne by
them. Why should they care? They don't have to pay the costs of
disposal!

About four to six times a year, I go to our local dump to deposit
refuse that is the result of seasonal cleaning. Every time I am there,
I see an enormous dumpster that is just FILLED FILLED FILLED to over
the top with late-model electronic junk of every description. It makes
me sick.......These items are totally useless albatrosses. No one can
repair them, cannabilization for useful parts is almost impossible,
and disposal in an environmentally acceptable manner is quite
expensive.

IMHO, These items should be put on a giant barge and sent back to the
country of origin with the caveat that a trade embargo will be imposed
against any country that refuses to take them back. Maybe when China,
Mexico, and other cheap-labor countries experience first hand what a
colossal pain it is to deal with the ass end of their product's
mercilessly short life cycles, maybe they won't dump quite so much of
this junk on our shores.

Bob,
The article details a modification to allow higher gain and better selectivity (as realized in the 250C) by modifying the 250 to conform to the 250C performance. The circuit changes are easy and amount to only a few components (or so the update states). I will send you a copy of the article w/schematic as an e-mail attachment, if you desire. The article does not discuss the tube change you mentioned.

I doubt that the Chinese are really worried about what we want. Communists
are not known for having much of a conscience.

I recall seeing a TV documentary months ago about the recycling of old computers. They bust them all up and sort the plastic, etc. Seems they were breaking even or even making a profit. The problem is getting them before people throw them in the dump. This was a huge operation with conveyors belts and big piles of dead or near dead computers. I think they had something like what the tree trimmers haul behind their trucks. Grinds them up into little recyclable chunks....sort of like spam. Grunt labor stands there all day by the conveyor belt with Tylenol and rubber gloves. At least they can claim they are in the computer industry. The last word in computer technology. <MH

Funny you should mention that, That's where a LOT of our surplus
(i.e. garbage) computers end up. They've got a growing problem in
China now about the recycling centers causing massive ecological
damage to the towns that they recycle in. From burning plastic
insulation off to salvage copper, and the chemical sludge from
stripping gold and silver plating.

One of the main reasons that we never seem to get sufficient control of our
pollution problem is the lack of pollution control in developing nations.
We must compete and pollution control is expensive.

Sacrificing human health for corporate profits is the global format. MH

I bet at least half of those is easily repairable ($5 in parts, an hour
labour at most). Most people don't consider repairing because it is
cheap to buy a new one. It's not the bad design per se. Just make the
stuff more expensive (import taxes) and demand a 3 year warranty or so.

I can't say for sure whther this would work (items may just be dumped
into the ocean), but it could be an idea.

Met vriendelijke groet,

Maarten Bakker.

I think lack of conscience is not a communist problem per se. This having been said, I know that at least some European communist countries, tried to make their design and manufacturing as solid as possible. Because in their philosophy there was no such thing as unemployment, and there often was a shortage of supplies, there was no reason not to put a good amount of engineering into their stuff. I can confirm 2 East-German black and white TV sets running since 1988 without needing repairs (and many more of those sets in continuous use in the Prague metro, if they were not drowned 2 years ago). Some radio collectors can confirm as well that East German and Czech radio's seem rather well built (alltough I have not seen too many of those, but what I have seen was nice).

Met vriendelijke groet,

Maarten Bakker.

Phil -

Close, but no stogie. They could be static drain chokes used on unlit
towers. They could also be RF chokes from the high voltage supplies of
old broadcast transmitters. They are not lighting chokes, however -
they have only one winding, where a lighting choke would have two or
three. The windings on a lighting choke would also be heavier gauge
than these. I deal with all of these critters on a regular basis. <g>

4526. Wha'sup on 500Khz ??

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-01 16:38:09 UTC
From: William Mutch <wcm1@NOSPAM.cornell.edu>
Message-ID: <MPG.1b9fc4fa23dae0e9897c4@newsstand.cit.cornell.edu>
Source record: 22137

Time was when 500 Khz was a most important party line, calling and distress freq for maritime mobile CW. It's been years since I've listened there and heard active CW as I donated my lowfer RCVR to Schoals Marine Lab sometime in the mid 70's. Recently got lowfer capability again, my Sat800 (which has more digital artifacts on lowfer than New Orleans has bedbugs) and a very recently purchased BC-348Q. Morse CW in the western world is long gone, but I expected to hear some third world vessels still using it. Nada. zip. null.
What I'm hearing is some strange signal which seems to have a surpressed carrier on 500.0 and sidebands both above and below at about 6 khz intervals...ie +/-6, 12, 18, getting radidly weaker as they get further from 500 khz. They are modulated A-2, MCW, with what seems to be code with three characters...a dit, a short dah, and a long dah send in the format {long dah, two dits, variable number of short dahs (n= 3 to ~20), long dah, pause} with timing like a busy signal on a landline phone.

?? Any one else with a lowfer RCVR wanna take a listen and see if they can hear it ?? I've been hearing it from 0000z to about 0300z.

?? anyone have any idea what this might be ??

I'll fire up the FRG-100 and maybe some other gear, and take a listen
from central .ok.us; not sure what if anything will be audible here.

What next? Will we be pining away for East German and Soviet era
products like the Trabant, Lada, ZIL?

It's one thing to restore and operate an HT-32B/SX-115 but East
German consumer electronics?

The solution to the trash and recycling problem is a bit more
attention to repair and disposal on the design and manufacturing
side, and a recycling deposit.

If the stuff were easier to fix and upgrade, it wouldn't be pitched
out so quickly.

Can't do much about cell phones, portable CD players, and other
smallish items but the big stuff should be fixable or recycleable.

If new consumer electronics were tagged with a barcoded serial
number and a $1, $5, or $10 deposit levied on each item. The
recycling industry could pay people to bring the stuff back.

de ah6gi/4 - No chance of my 75S-1, SB-303, or SX-100 ever
going to the landfill.

I only had time to go to EPO on Fondren. Spent about 30 minutes and didn't find anything I couldn't live without. I was there a year ago and the main thing I noticed is that prices have gone up. If this is the case elsewhere, homebrewers are going to have to dig deep or look elsewhere.

Could be a parasitic from an aero beacon. Try tuning around the beacon
frequencies (around 300 to 400 KHz if I remember right), and check
for a beacon tone-modulated at the same time as the spur on 500 KHz.

I may have an SP-352, I'll have to look through my box of neon display
stuff. Email me directly if you still need one and I'll see if I have one.

the radionews service had a brief article on this a while back, re: 500 khz, saying only China still uses 500 khz, for coastal traffic, and will soon migrate off, and therefore there is a proposal to create a mini ham band or channel around 500 khz (20 khz or so?) to honor the many radio officers who died sending distress calls and lives saved etc.

4549. Czecho-Slovak R-4 manual anyone?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-02 12:50:18 UTC
From: n1jpr@hotmail.com
Message-ID: <95a201e0.0409020450.2eac22b9@posting.google.com>
Source record: 22060

I am talking about the (Tesla?) R-4 field HF receiver, from 1962. 5 bands, covering 1.5-12.5 MHz in A1-A2-A3, single-quartz filter, 500kHz calibrator, AC/DC PSU with dynamotor.

I have two of those (I am actually listening to the BBC on 12095kHz on one of them right now...) but I only have a partial photocopied manual.

It works well, the schematic is reasonably simple, but mechanically the unit is a bit of a mess. You can do all the simpler things with a flat screwdriver, but as soon as soon as I have to take anything apart, I wonder where to start from and if I'll cause parts to pop out irretrievably.

Does anyone have a complete service manual for this?

AFAIK, manuals were available in Polish, Czech, Russian, German, and Hungarian. Spanish and English possible, but I am far from sure. A photocopy in any language is OK, except Hungarian (sorry).

Thank you for any hints!

Not easy at this end...I'm listening on a 156 foot long off center
fed wire 45 feet up between two tall trees...hard to rotate for a null
8-}
A guy on the boatanchors board suggested I may be hearing
microprocessor artifacts...sounds plausable...a 500 khz clock
subharmonic and instructions transmitted. My cell phone and all three
'puters are off when I'm listening but who knows what the guy next door
may be running.

>ni4k@aol.com

I second the other poster's statements.
The SP-325 goes for around $300 on places like eBay.

I also have one and checked with Ten-Tec about spares. Nothing is
available from them. They claim that they don't even have spares left
for the RX-325 - the civilian version.

This is an exception for them since they carry most parts for their
true Ham rigs built back to 1975 or so.

The SP-325 was built for the Navy to be used for training purposes.
It wasn't meant to be a first line, day in and day out main receiver.
When the Navy sold them off, all parts were discarded or sold as
surplus.

Most things can be obtained elsewhere except for the vacuum
fluorescent display and the processor chip. If those go, you're
out of luck.

It's a nice little receiver - rock stable due to the crystal ovens.
The filters aren't bad. Just ceramic filters for the 6.0 and 2.8KHz
position but a decent crystal filter for the 500Hz position.

The only area in which the receiver falls down a bit is intermod
rejection, above 20MHz or so.

==========
In the Netherlands and probably other EU countries all electrical goods are subjected to a 'disposal fee' related to the purchase price and size/hardware content ,which is to be paid upon purchase.

For a hair dryer the fee is low , for a TV set or laundry machine the fee is much higher. Old /defective goods can be returned to the shop the goods were purchased ,or to the relevant municipal waste depot.

Good system where money is paid up front to pay for eventual disposal/ recycling.

One of the early 'top' recycling countries in Europe is Switzerland.

Yes indeed . A few years ago I saw a TV programme on lead acid batteries
recycling.
Used batteries were shipped from the USA (back)to Taiwan,with the lead
being recovered there . A dreadful operation. Working conditions and
resulting pollution of the local environment were really bad.

And the electronics shops are supposed to return a certain amount of
rubbish for the consumer electronics they sell. If they can't provide
this they must pay a fee. Some shops collected the old PC's to give to
schools in Poland, but had to give up this practice because it reduced
their rubbish to be collected

On the other hand they might be pleased to solve your problem to get
rid of your rubbish

well, depends on where you are located; in USA, the ARRL program for WARC planning would be one group to send input and support (as in $;-) as well as the various LF (low-fers) groups etc.

in australia http://www.southgatearc.org/news/august/500khz.htm WIA assoc. is pursuing the proposal too, this is similar to the blurb in radionews posting (in rec.radio newsgroups in the last few months IIRC)...

I don't know if this rig qualifies as a boatanchor, but I thought I would
ask as there are many here who are knowledgable.
I got the rig from a freind.
The 40 meter rf pot has a problem. The ferret core is bottomed out and won't
screw back (upward) or catch the threads/coil.
Is there a tip or trick to 'grab' the ferret core to get it to catch.?
I'd hate to have to tear the board out or send it out for service.
Any suggestions appreciated. Josh

I have been known to smack the core to break it into pieces as it will fracture fairly easy. Then flip it over and the pieces fall out. Or how about a little bit of epoxy on the end of a tooth pick. Let it dry and then unscrew it. Of course, you need to make sure you don't glue the slug onto the form. Can you drill a home through the board to allow it to pass out the bottom? You might be able to shine a bright light through from the bottom of the board to see if you would disturb any traces. Just some ideas..

Real sensible question.
```

Just like the one about two white guys and a black guy
arriving at Heaven. St. Peter asks the first guy what famous ship was
sunk by an iceberg. Guy answers, "Titanic" and St. Peter waves him in.
St. Peter asks the second white guy how many died. Guy says, "1503"
and St Peter waves him in. Then he turns to the black guy and says,
"Name them."

Many people don't realize that most of the high tech parts of
electronics equipment, such as the, ahem, CRTs, are _made_ right here in
the U.S. and shipped to another country for assembly. Sony's San Diego
plant is one notable example.

I would find a slug of the same size and screw it in from top of
coil,the slug that is bottomed out is not of any use ,just leave it
there and tune with the new slug.. Harold W4PQW

Remove the coil and unscrew it from the bottom. Turn the core over and put
it back in upside down. It has an adjustment notch on each end.

As to removing it. You don't need to remove the board. There is a trap door
under it. Remove the AF unit and you will see it.

I'm offering a complete PRC-77 radio set in overall excellent, fully operational condition. The radio itself near-mint. It's been aligned and checked and is guaranteed functional. I've included the best of the accessories I have with this radio.

1 ea. PRC-77 R/T unit, almost new-appearing, guaranteed functional
1 ea. ST-138 carrier/straps, unused/unissued
1 ea. CW-503/PRC-25 carry bag, unused/unissued appearing
1 ea. AT-892/PRC-25 short whip (gooseneck plus tape section), excellent
1 ea. H-250 handset, used excellent
1 ea. AT-271 sectionalized long whip, used excellent (getting tougher to find)
1 ea. AB-591/PRC rubber base for long whip, used very good condx
1 ea. Battery, BA-5598, lithium primary (for a little instant gratification)

Hi,

Any pointers to a source of the calibration procedure for the Fourdee AN/PSM-37 multimeter would be much appreciated as the usual manual vendors don't seem to have this. I have 'googled' for the last 24hrs in vain.

A friend gave me one of these the other day and it took me back to the days when I used to stick my trusty AN/PSM-6 behind the seat of a Land Rover and rattle off into the hills of 7Q7-land to fix an ailing repeater.

It could already be cracked. Leaving the old one in there sounds like a
good & easy idea, but if it can move around, it could later detune it.

I wouldn't call it a "pot". That sounds strange. I don't know just what
this slug-tuned-coil looks like, but have an 830s.

Here are a some items for sale. Prices do not include shipping. I will ship overseas.

Military Multimeter ME-260/U with RF Probe.....$85 plus shipping
Nice working military unit with RF probe. This appears to be the same probe as used with the Hewlett Packard HP 410 series of meters. Missing back cover.
http://members.cox.net/radiostuff9/mil_vtvm3.jpg
http://members.cox.net/radiostuff9/mil_vtvm4.jpg
http://members.cox.net/radiostuff9/mil_vtvm2.jpg

Hewlett Packard HP 400E AC Voltmeter.....$35 plus shipping
This is a tested and is a working unit. It does not include a power cord. It does include a copy of the manual on CD. I have several of these units
http://members.cox.net/radiostuff9/hp400e.jpg
http://members.cox.net/radiostuff9/hp400e2.jpg
http://members.cox.net/radiostuff9/hp400e3.jpg

RCA Type LM-1 Multimeter Plus Parts Unit.....$50 plus shipping
This is an unusual looking Bakelite cased VOM which is from the late 1940's and early 1950's. Measures volts from 3 to 1000 ac and dc volts, 1 mA to 1000 mA DC and resistance. This unit is in excellent condition. Also included is a 2nd non-working unit. The non-working unit has a free movement. I did open up the inside and it is clean with no evidence or of abuse or arcing. It is missing the battery cover which is just a flat piece of plastic.
http://members.cox.net/radiostuff9/rca_lm12.jpg
http://members.cox.net/radiostuff9/rca_lm13.jpg
http://members.cox.net/radiostuff9/rca_lm1.jpg

Vintage Westinghouse Portable DC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition. The instruction card on the inside cover has a date of 1942.
http://members.cox.net/radiostuff9/west_meter2.jpg
http://members.cox.net/radiostuff9/west_meter.jpg

Unknown Microphone #1.....$30 plus shipping
Neat Brushed aluminum housing. Manufacturer is unknown. Needs a new cartridge which you can probably get from Radio Shack to work.

http://members.cox.net/radiostuff9/weirdmike.jpg

Unknown Microphone #2.....$25 plus shipping
Manufacturer is unknown. This does work and was hooked to a Ranger I
when I got it.
http://members.cox.net/radiostuff9/odd_mike3.jpg

Philips 4-65A tube with Ceramic Socket.....$40
Build something! I did check the filament for continuity and it is OK.
No other way to test. The beige sheet in the background makes the tube
appear burned which it is not!
http://members.cox.net/radiodx3/amp_465a.jpg
http://members.cox.net/radiodx3/amp_465asocket.jpg

Eimac 3C24 Power Triode Transmitting Tubes.....$15 each plus
shipping
I have two of these that are NOS tubes which are new in the box. I did
check the filaments for continuity
http://members.cox.net/radiostuff9/eimac3c243.jpg
http://members.cox.net/radiostuff9/eimac3c24.jpg

Eico High Voltage Probe.....$15 plus shipping
http://members.cox.net/radiostuff9/eico_hvprobe.jpg

National Type MCN Dial.....$20 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Books
1995 ARRL Handbook.....$10 plus shipping
http://members.cox.net/radiostuff9/1995arrlhandbook.jpg

ARRL - The Mobile Manual 1962 Edition $8
http://members.cox.net/radiostuff9/mobilebook.jpg

ARRL - FM and Repeaters 1972 Edition.....$6
http://members.cox.net/radiostuff9/fmbook.jpg

Fifty Years of ARRL - 1965 Edition.....$10
Neat book published in 1965 details the founding of an first fifty years
of the ARRL from 1914 to 1964. Lots of neat vintage photos.
http://members.cox.net/radiostuff9/fiftyyearsarrl.jpg

Ham Radio Horizons Magazine - First Issue.....$15 plus shipping
This is the first issue of Ham Radio Horizons magazine which premiered
in March of 1977. This was a spin-off of Ham radio magazine by Jim Fisk
designed targeting beginning and new hams. This issue is in excellent
condition inside and still has the mailing cover over it. This mailing
cover is a duplicate of the front cover. The back side has a handwritten
address along with 26 cents in US postage.
http://members.cox.net/radiostuff9/hr_horizons.jpg

Thanks for looking.

Hi,

I know this may not qualify as a true "boat anchor" as we know them to be, but...

Found one of these at a flea market yesterday. It isn't dead, but seems to need some attention. Squawks and squeals more than it receives. Anyone have any info on it? Schematic, builders guide, etc?

There are 4 coil forms in the unit. 2 have slugs, 2 do not, though they have threads. I'm wondering if they were empty as new or the slugs came out or were removed......

This receiver has coverage in 4 bands from 550 KHz to 30 MHz. I know it may not be the "best" receiver, but if I could get it going to listen to some SW or Hams or whatever , this would be a handy little receiver to stuff in a suitcase. It runs off of 6 volts via batteries or adaptor. I have somewhere in my junk pile and unfinished CW QRP rig for 40 meters I believe. It was 99% finished, but due to other issues became a WAY back burner project. Maybe I can match the two together for a "away from home" station.

Any info you can share????

Thanks,

L.

My engineer friend sent me an article that signals from outer space may have been heard on 1420 MHz.

If you cannot identify the source, then it legitimately comes under the the classification of unidentified radio source. Perhaps you should start a URS website. Well, maybe the FCC already has. Perhaps they are covering up these signals and stopped the use of 500 kHz because they were afraid radio operators would identify the signals.

Or, the source may be a hangar in Nevada.

You can use a small handheld radio that tunes 500 kHz and walk around the house. It sounds like it may be internal.

Hi L.,
It sounds like you have found a schematic, but if not try:

http://www.qsl.net/kc6vdx/gear/globe.html

As to your other questions....Have you ever used a regen before, as in
are you familiar with how to tune it?
Also, what are you using for an antenna?

Glad to give any more info that I can.

Hi Bob,

I found the site you referred to just after I posted this ad.... I'm ok
with using a regen, but I still have a ? of the unit itself. The Schematic
doesn't show the coils to be tunable. Not as I'm typically used to seeing
anyway! Most schematics I'm used to, have an arrow to show tuning. AND of
the 4 coils, 2 have slugs, 2 don't. So, was not sure of the slugs in the two
are missing OR the two present were in error. But the site you suggested,
has a pic of the PC board. I can clearly see the two here with slugs are ok.
I can not make out if the other two have slugs down in them or not. I just
got this thing yesterday, so still playing. About 25' of wire on it for now.
Will play some more. But was wanting to know about the other 2 coils so I

know whether I'm missing some tuning or not. If not, then I guess I'll reacquaint myself with the Regen.. IT "has" been a while. I'm sure I'll figure it all out, its just trying to get a heads up if possible on the "proper" makeup of this unit.

Thanks,

L.

The slugs would be used to calibrate the tuning scale. Being a rather
simple receiver, it is quite likely that the set doesn't have provisions
for aligning the radio, especially considering its intended market;
few kids would have the ability or test gear to do so. So, unless the
dial scale is off by a considerable amount for those two bands,
I wouldn't be too concerned about the coil cores.

Pete

4596. FS: Johnson Invader 2000...

Newsgroup: rec.radio.amateur.boatanchors

I have added some scans of an original Clough-Brengle
model UC VTVM to the Clough-Brengle web page.
http://CloughBrengle.homestead.com
Many thanks to Bob Lindsay for loaning the manual.

As always I'm looking for more Clough-Brengle equipment
to add to the web page, and my personal collection.
If you have and interesting C-B gear let me know.

73, Ron

Did he? You didn't finish the story. So What happened?

There is a big difference between "name one" and Naming 1503, and I don't get the connection.

How about this joke, maybe it will make things clearer-

Two male priests are fishing with a new female priest recently
transferred to their diocese on the shore of a huge lake. It is
discovered they left their bait back on shore, and the female priest
offers to get it. She calmly steps out of the boat, and walks gently
across the water to the shore and picks up the bait without even getting
wet.

Before she returns, one priest whispers to the other- "They send us a
female priest and she can't even swim."

So there was no connection.

The question was:

> > Name one person who died that can be traced directly to
> > salvaging efforts.
> >
> Real sensible question.

Changing to trying to tell very old and lame jokes does not answer the
question.

Provide one verifiable name of a person that died as a direct result of Salvage
efforts.

4627. Civil Defense symbols

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-08 19:26:58 UTC
From: Pete & Renee Davis <pandr@metrocast.net>
Message-ID: <413F5D02.94DEE42D@metrocast.net>
Source record: 22188

Can anyone tell me when the civil defense frequencies started being marked on radio AM dials, and when the markings were discontinued? I have come across several radio that have them. One was a Motorola add-on car tube radio (in a stylish shade of turquoise) but no date on the paperwork, another was a Zenith AM/FM whose paper labels had worn off, and the other is Bendix Navigator 420 that was listed in catalogs for 1965 (Thanks Walt!).

My Cold War history is a bit sketchy. Could this have come about after the Cuban Missile Crisis in 1962? I just remember the grown ups being really worried then, but I probably wasn't even aware of radio at the time. I'm wondering if anyone on the list can shed some light on these markings, and whether they might be useful in dating my mystery Zenith.

You can learn lots on Google by looking at the Conelrad (Control of Electromagnetic Radiation) sites. The concept was developed in 1951 and it was in 1953 that AM radios had to have the markings on them at 640 and 1240 khz.

Therefore I would suggest your radio was no earlier than 1953, but just how late the markings continued I don't know -- I didn't bother reading that far.

They were not really civil defense frequencies, they were part of the CONELRAD
system. Do a web search on CONELRAD.

As far as I know, the CONELRAD system stuck around until the beginning of EBS.

By the way... Richardson Electronic sells the 8873 at 731$ (on order).

73

Tony, I0JX

"Antonio Vernucci" <vernucci@tin.it> ha scritto nel messaggio
news:FkL%c.280912$5D1.12527133@news4.tin.it...
I recently inquired EIMAC about 8873 and 8875. This was the answer:

Dear Antonio: thank you for your request.
Eimac still makes the 8873 tube; however we stopped making the 8875 tube
several years ago.

The 8873 tube is available through our distributor, Richardson Electronics.
Their website is www.rell.com. They can give you price and delivery
information.

Please let me know if there is anything else you need.

Regards,
Linda Di Lorenzo
Eimac Marketing Dept.

Problem is that the 8873 is very expensive. On the other hand the cathode
current of the 4CS250R is by far lower than that of the 8873. Two 4CS250R
would hardly replace a single 8873.

If you have access to a mechanical workshop, perhaps you may succeed
modifying the external plate of a (much more common) 8874 so that the plate
salvaged from a faulty 8873 fits on it.

4634. Chinese Miliatry HF Radio Type 102E For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-09 03:55:15 UTC
From: redstarradio@sympatico.ca
Message-ID: <27dff19b.0409081955.46b31454@posting.google.com>
Source record: 22192

For the demand of ongoing Korean War in the begining of 1950's, Chinese military developed this military field radio for its army. The radio was designed and built as primary lang-range radio for communication between regiments and devisions. The radio set consists of a type-81 transmitter and a type-139 receiver, a handcrank generator and accessory set that includes a dipole antenna, a long wire antenna, a full set of spare tubes, a multi-meter, a fire heated iron for field emergency repair, a screw driver, a pliers, headsets, a telegraph key, a fine made microphone, etc. The transmitter works on CW or AM mode, it transmits not less than 15W on CW mode and emits not less than 4W on AM mode. The transmitter has a frequency range of 2~10 MHz in 3 bands and receiver works 2~12 MHz in 3 bands selected by a switch. The set like this with transmitter and receiver in separate case are also called type 102E radio set. The transmitter and receiver together weights about 50 lbs not including battery. The transmitter was designed to be powered by the handcrank generator and the receiver was designed to be powered by a set of dry cell battery.

The radio we have here for sale is a brand new set in its original packing including everything mentioned above. It's a brand new OLD radio.

Please email me for price and picture.

EBS is gone and has been replaced with the EAS system, which is supposedly
more suited to local disaster events and less for national alerts. It uses
FSK digital data keys rather than the single tone pair for keying. Frankly
it hasn't shown itself to be any real improvement if you ask me.

4638. POL OT: Senor Citizens: You Don't Owe The Democrats Loyalty

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-09 16:05:09 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <Va%%c.207$tJ1.3@trnddc04>
Source record: 21996
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.policy

NOTE: OFF TOPIC THREAD- REPLY AT YOUR OWN RISK.
Natygrams cheerfully ignored.

Why Seniors Don't Owe the Democratic Party loyalty:

Franklin Roosevelt is dead.
Harry Truman is dead.
Hubert Humphrey is dead.
Robert Kennedy is dead.
This isn't "your" Democratic Party anymore.
The *new* "leadership" talks sweet honey and gives you nothing.
The party has been taken over by unscrupulous, opportunistic
people who will say or do anything to give themselves
money and power.
Witness: they've been making the same promises
to you for forty years, yet delivered little.
They know that they can fool
at least 50% of the people into voting for them
by talking sweet trash (young people)
or just by being Democrats (Labor/Academe/some Minorities,
who would vote for Satan himself if he ran as a Democrat).

Most Seniors were raised to value loyalty,
and that included "party loyalty."
That's a *good* thing, when the loyalty is deserved.
However, if one remains loyal to an organization
that has become corrupt, then one is a part
of that corruption.
The whistle-blowers at corrupt companies were "disloyal,"
but they were also right.
Thus it is with the current crop of Democrat leaders;
They are corrupt and out for themselves,
so you don't owe them any loyalty.
Demanding "loyalty" to something that
has become corrupt is flat wrong, and you know that.

We cannot escape our *personal responsibility*
for the outcome of the votes we cast.
Supporting corrupt people
and the destruction they do to your nation
makes you just as guilty as they.
Voting for a man like Kerry-
a man proven beyond question to be utterly untrustworthy

and to lack even the tiniest shred of leadership ability,
makes you guilty of the damage he does while in office.
Moreover- if you call yourself a person of religious faith
and you vote for a man who has told you
he is going to support abortion,
then you are in part guilty of the lives
of the children killed thereafter.
"I voted for abortion when talking to voters,
but I voted against it when I wanted Communion,"
seems to be Kerry's line.
If you vote for a man who makes an issue of outsourcing jobs
while *his* companies have outsourced every job
short of the janitors,
you are in part guilty of taking those people's jobs.
It's even come to light that he "doctored" his DD-214,
claiming valor that is not his and thus cheapening
the true valor of "The Greatest Generation."
This and many other points illustrate
Mr. Kerry's lack of character,
and you were raised to value character,
even if the rest of the country has forgotten its value.

** Would you have wanted this man **
** to take over for Franklin Roosevelt? **

Just as you cannot discipline a misbehaving child
by continually giving the child what he wants,
you cannot "fix" the Democratic Party
by rewarding it for corruption with your vote.
Reclaiming the party must be done a person at a time
from within the party. Give them some years out of
power and the grass roots of the party will
move the corrupt men out and replace them
with more visionary people. There *are*
Franklin Roosevelts and Harry Trumans out there,
but the misleaders aren't going to let them
come forward if you vote for men like Kerry.
Voting for unfit candidates over and over
only prolongs and deepens the problem.

President Bush isn't an angel or a saint;
he's just a human being like you and me,
with all the faults and problems that go with that.
He isn't the perfect choice, but he is the
better choice at this time, by far.

Regards,
David S.

Check out the review from actual owners at http://www.eham.net
I observed that Pyramid cut costs (e.g. smaller heat sinks, marginal
component values) a few years ago on some models with the expected decrease
in overall product quality.
Plus some really bad soldering (e.g. MFJ also soldering problems in their
equipment from time to time) with some models.

For a 35 amp power supply (normal 50/50 usage), I recommend the Astron 35A
or 35M (I refer the metered version. Preferred choice by the commercial
(business band) radio market - easy to repair and components (and heat sink)
generally rated for stated usage.

Astron readily available on surplus market (e.g. eBay and flea markets). IF
you find a broken one being given away - pick it up fast ! Very easy to
repair (entire web site for troubleshooting and repair for the novice
technician or amateur radio operator)

It looks like a nice amp apart from the tube, what happened to the 8873? a
conduction cooled amp is ideal for phone, no noisy fan. I'm looking at a
8874, removing the cooling fins and replacing with a block of copper.

Blatant sophistry!! (Sometimes abbreviated: BS)

Those of us who can remember or have studied the 1930s and WW2 can recognize how the Cheney-Bush grab for power parallels the path that Goebels and Hitler took before they got into a position where they could squash the opposition. Let them in again and our children and grandchildren will pay for our gullibility. It can't happen here? That's what the Germans said.

Be VERY CAREFUL with BeO (Beryllium Oxide) - which is used to heatsink an
8873.
If you are unfamiliar with this material (e.g. dust, filing, milling this
material), please read appropriate harzardous material handling precautions.
Aquick google.com search should provide you necessary UK and safety
precautions.

I'm a life-long Republican. I personally knew Barry Goldwater (a great ham) . I am ashamed of the current crowd in office. We elect conservatives to : 1. balance the budget, 2. avoid foreign entanglements, and 3. foster traditional values. The current W crew has failed to do any of that.

Their economics are clearly slanted to mega-corporations. Their foreign record is abominable. We are entangled in Vietnam in the desert. They hardly foster traditional values when they allow mega corporations to ship jobs overseas, and wink while the Chinese end up owning 20% of all our treasury bills due to our ridiculous foreign trade policies.

In fact, the record of W is akin to my most hated president, Lyndon Johnson. Both got themselves into extended foreign wars, both blew the budget, and both allowed their cronies to run amok with more pork than we can imagine.

Just because a candidate wears the hat of Republican doesn't mean he/she is really a Republican. Check the records, look at what they've done, and ask yourself: are you better off than you were 4 years ago?

Sorry, here is one very Republican that won't vote for W. You shouldn't either.

Definately not. Well W did cut my taxes. Be nice if I had an income
that I could pay taxes on though. Been out of work. W had plenty
of time to fix the economy, even if you blame Clinton.
"It's the economy stupid".

Seems that W didn't have an exit plan for Iraq. Or thought
everyone there would be dancing in the streets cheering us
all this time.

Also W managed to alienate the immirgrant community. The
guys who could have been helpful to figure out the middle
east and elsewhere.

I have, and the last electable 3rd party candidates for president, were
John Anderson, and Ross Perot. Anderson was just another democrat, and
Perot, well...he was interesting until his brain exploded.

There is no one fielded by a third, forth, or even 10th party right now
that is electable... not even as a milk monitor.

However, if you are undecided, but tempted to vote for Kerry, I *strongly*
encourage you to vote for Nader, or the easter bunny ;-)

I am restoring a 1937 BC-312.

A previous owner had installed a Collins mechanical filter in the 1st detector stage (normally a coil with crystal phasing).

The Collins filter is part number 526-9395-00 and labelled "F 455 Z 7"

From google searches, it appears that this might be an SSB filter, but I haven't found an exact reference.

Anyone know what this really is? I have to decide whether to "un-modify" this stage or leave it as-is.

TIA,

Steve.

I have an especially clean Collins 32V-3 (not presently operating) and a wonderful, cosmetically and functionally excellent Heath Apache/SB10 for sale. I am not eager (or even willing) to undertake shipping either of these units so I will be offering them at the Newtown, CT (very western CT) hamfest tomorrow (Sun 9/12).

Also available will be: (1) an especially clean and functionally perfect HP 201C audio signal generator, (2) a pristine, laboratory HP412A VTVM (a real gem), (3) a like-new Powerstat enclosed 15 amp variac and (3) a URM-25D RF signal generator. For those not familiar with these, the URM-25D are truly excellent ex-Navy 30KHz-50Mhz signal generators.

If any of these are not sold tomorrow, I expect to bring them to HossTraders in NH Ocotober 1st/2nd.

Direct any questions to: denis.sharon AT att DOT net or call 203-431-8181.

Regards,

Denis Sharon W1AOK
Ridgefield, CT

Unless you want authentic, I'd leave it as it is. The collins filter
is probably a lot more civilized in operation than a phased crystal
filter. Although, by playing with a phasing adjustment, you can vary
the width of the crystal filter from wide to narrow (with a bit of
ringing) for CW.

It depends on what you want to do with the set.
If you plan on copying mores code (CW) with it, you're probably
better off with the originla crystal pahsing circuit.

I think you are right that the mechanical filter will be nice, but if it is an SSB unit, won't the audio be messed up. I suppose that I should just leave this part as-is until I get the rest working. Then if it sounds good, don't touch it.

I always fight with myself regarding "authentic" versus better working.

Thanks.

I think Peter's probably right, it's a 7KHz filter, probably just right
for "communications grade" AM radio operation. Which is you're going to
use this to listen to short wave broadcasting is a bit narrow. But good
for adjacent interferance.

Sideband sounds a bit "off" with these older receivers, as they use a
BFO with a large local signal mixed with the IF signal. Not too linear,
and the voice quality suffers a bit as a result. More "modern" SSB
receivers use a product detector (linear mixer) to add the BFO to the
IF signal.

Heh, then again, that was also a popular "modification" in the 50s and
60s as well. "Adding a product detector" to your AM/CW receiver for SSB
operation.

> I always fight with myself regarding "authentic" versus better working.

The "big thing" in the 50s and 60s was to modify all the old war surpls
equipment to "make it work better than new." Some of the mods were good,
but were done by butchers. Others, no matter how meticulously they were
done, offered little or no improvement to the orginal operation.

I think you may be right; or close!
Just did a very quick search and one hit < www.wa3key.com/filters.html >
shows a filter labelled F455FA-21 describing this as 455 kHz centre
frequency and bandwidth as 6 db. down at 2.1 (that's two decimal one)
kilohertz. It also mentions "All (filters) have the steep sided skirt
selectivity common to all Collins mechanical filters".
BTW a little further on it says something about the use of filters with
different bandwidths; maybe the OP has a 700 Hz (0.7 kHz) or so called 600
hertz CW operators IF filter? Or maybe a so called 6 kilohertz AM filter.
And it would be, placed instead of the crystal filter, in the front end of
the IF immediately following the first mixer.frequency changer?
The < rec.radio.amateur.boat anchors > news group might be good place to
ask; also I think I've seen a description of Collins mech. filter
nomenclature some years back, on the internet somewhere!
Cheers.

My information says that the IF frequency is 470 Khz. Perhaps the IF
frequency has been changed to 455 Khz on the receiver in question to
suit the added filter.

Yes, the previous owner added caps on the IF to tune it down to 455. The job is well executed-- not hacked. I am just looking for the real specs on the part. Perhaps this was modified by a CW or SSB guy.

I was born in 1925. I am English, a World Citizen.

I am excluded from voting in the forthcoming USA elections.

May I say how grateful are the World's 5 or 6 billion population, of all ages, to see that at least SOME citizens of the USA are aware of the most horrible catastrophy looming before ALL of us.

Yes, thankfully we have the Bush Administration to thank for trying to
stop this catastrophe and carry the war back to the land of the
perpetrators.
Killing 3000 Westerners within 2 hours was a very dramatic opening act.
I don't want to see Act II.

Might have been modified by an AM guy, since the 7-kHz filter
passband would yield a 3.5 kHz AM bandwidth.
Odd that he padded the IF stages--I'd have
thought they would have easily tuned down another 15kHz without issue.

Might I suggest that an "English World Citizen" has approximately 1000 years of shit to atone for, starting with the Duke of Normandy, leading through Richard the III, and culminating in Allenby. Mere words cannot express our gratitude.

You should be thankful the US bailed you out of two WW and be even more
thankful that Bush is in office now.

But knowing a bit of your current state of affairs in the UK, it's easy
to understand why you are so for the Liberal Democrats, it's your
welfare state style of living.

We are looking for information on a transceiver we have. According to the tag, it is a VHF transceiver, model TRV-5A, Aerotron. The tag also says Aeronautical Electronics, Inc. US Department of Commerce.

We are unable to find any information about this radio, its value, or anything else. Can someone point us in the right direction?

Thanks,
Shannon

4692. new 2m repeater on space station

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-13 10:18:00 UTC
From: g3zhi@hotmail.com
Message-ID: <415873af.1777967@news.btinternet.com>
Source record: 21953

new 2m repeater on space station
a new 2m repeater is now operating on the
international space station 24 x 7
the uplink is on uhf 437.800 and the downlink is on vhf 145.800
no tone burst or ctcss is required
the radio is a kenwood tmd700 operating in remote crossband mode
it just retransmits on vhf what it hears on uhf
so if you are getting through you can hear yourself
on the downlink

anyone can work it using a co-linear

to see where the space station is 'live' check

http://science.nasa.gov/temp/StationLoc.html

for 3 days in advance predictions download the pcsat decoder program

http://www.ui-view.com/uiview32/pcdec242.msi

when the iss repeater is being worked the audio may be streamed in the
amsat
conference server on echolink so anyone anywhere in the world can
listen in

4696. FS: Precision signal generator twins, models E-200 & E-400

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-13 15:51:55 UTC
From: Al Schapira <a.d.schapira@worldnet.att.net>
Message-ID: <4145C252.8020407@worldnet.att.net>
Source record: 21957
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

For sale: Precision Signal generator twins, models E-200 & E-400,
Precision Apparatus Company, Elmhurst, L.I., N.Y., USA

Both of these classic type-type signal generators are in very good
electrical and cosmetic condition. The E-400 is a sweep generator
and the E-200 is a straight AM signal generator.
Documentation is included.

Model E-400 Sweep Generator, serial # 10793,
approx 12" wide x 11" high x 6" deep, 19 lbs

Working, clean, original knobs, pointer & connectors, very good
condition. New 3-wire AC line cord.

Includes original RF output module with connectors.
Includes original Precision 10.7 MHz marker crystal.
Includes original manual with schematic and parts list, plus extra copy.

Model E-200 Signal generator, serial # 6439,
approx 10" wide x 11" high x 6" deep, 14 lbs

Working, clean, original knobs, pointer & connectors, very good
condition, plastic graticule yellowed and slightly distorted due to age.
Top handle missing. New 3-wire AC line cord.

Includes copy of manual "Servicing by Signal Substitution" with
schematic and parts list.

Pictures at
http://home.att.net/~a.schapira/pix/Precision200400/PICT0009.JPG

http://home.att.net/~a.schapira/pix/Precision200400/PICT0014.JPG

Asking $40 each, or both for $60, plus shipping from 07042. (These
units are heavy.) I can deliver them to you at the Kutztown event
on 9/18. Or you can pick them up in Montclair, NJ.

Thanks for looking.

For sale: EICO Signal generator twins models 360 & 320,
Electronic Instrument Co., Inc, Brooklyn, NY.

Both of these type-type signal generators are in very good
electrical and cosmetic condition. The 360 is a sweep generator
and the 320 is a straight AM signal generator.
Documentation is included.

Model 360 TV-FM Sweep Generator, serial # 10548,
approx 10" wide x 8" high x 7" deep, 10 lbs

Working, clean, original knobs, pointer & connectors, very good
condition, minor scratches on metal case, minor abrasion on border
of front panel.

Includes original manual with schematic and parts list, plus extra copy.

Model 320 Signal Generator, serial # A-11381,
approx 10" wide x 8" high x 5" deep, 8 lbs

Working, clean, original knobs, pointer & connectors, very good
condition, minor scratches on front panel. New 3-wire line cord.

Includes copy of manual with schematic and parts list.

It's a VHF air band transceiver, if it's what I think it is. AM-only,
wideband. No longer legal for use because of the wide channel spacings.
Not useful to convert over to the 2M band without adding an FM modulator.
Basically not worth anything other than for parts.

Hi All,
The basic question is: If I go to the UPS Store and have them professionally pack a 65 lb. set for shipping within UPS guidelines, will I have less trouble collecting from UPS if the item is damaged by them?
rgds,
Mark S.

I genuinely don't know, and so this post is non-responsive as regards
your original question.

BUT (and I don't mean to start a flamewar over shippers) I'd never
use UPS when I could ship by USPS or FedEx. I've seen UPS trash stuff
that had been packed professionally and that I wouldn't have thought
could be trashed by any means short of running a truck over it. I've
never seen FedEx treat anything I've shipped, or had shipped to me,
badly at all: oscilloscopes and other fragile stuff have arrived hale
and hearty, ready to plug in and use, via FedEx.

The trick with UPS is to put $1000 or more Ins. on it. That way it
atomaticly gets special handling and they treat it like a baby.

Aren't the stores franchises? Seems like an opportunity to get caught in
a finger-pointing war between UPS and the franchise.

My experience with UPS is that when things get damaged, they will do anything
possible to avoid making good on the insurance. FedEx Ground is about as
likely to damage things, but they are much easier to work with when damage
occurs.

It will be a problem either way but easier if they pack it. You can probably do a better job yourself. They are trying balance an equation involving profit, insurance premiums, insurance claims, and customer satisfaction. Use your own judgement in terms of what you think might be most important to them versus you...

If you are selling something and do not really care if it is damaged, then the UPS packing is fine. They will probably pay - but the trick is to get photos before and then be prepared to get an estimate on the value after it is damaged.

If the object is valuable and you do not want it damaged, do not let UPS pack it. Pack the item as if it will be dropped about 4 feet. If you are comfortable it can handle that, it will probably arrive safetly. Better to use a shipping container designed for transport. I have received poorly packaged pieces of equipment and cannot blame the shipper for the damage. In one case, I received a badly damaged SX-88. I told the seller to pack it himself, but he took it to Mailboxes .... They put it in bubble wrap and then dropped it onto the front panel putting it in the box. I am sure it was destroyed before it ever went out the door. They paid off, but it required a lot of work to repair.

A tad off subject, but I need to glue some foam-like...rubber or silicone spungy material to plastic.
I have seen Silicone seal or RTV by GE, Dow Corning and DAP. Does anyone know if these are all the same? Is one Acetic acid based, and the other methanol based? Is one better than the other?
Or, perhaps can anyone suggest a better adhesive for this purpose??
Thanks for any suggestions you may have.

There's all sorts of silicon sealer stuff these days. Some is still
acetic acid based and isn't very popular around some metals but that
doesn't sound like an issue in your case.
Weldwood Contact Cement sounds like another alternative for you.

I would agree with the contact cement approach.
Follow directions- contact cement works through cohesion not adhesion.

They do not know how to pack radios. Yes, you will be to collect
easier, but you will almost surely have to.

I have had to make only a few claims in 1000s of packages sent and
received and it has almost always been the "professionally" packed
products. One was due to a fork lift-- nothing would have saved
that box.

Buy your boxes from them.

GE and Dow both make a couple hundred different kinds of RTV. Some are
acetic acid based and some are not... the ones that are not are specifically
sold as being for electronics use most of the time. They are available in
different viscosities as well, from very thin to very thick, and also in
high temperature red versions. DAP only sells an acetic-acid based type
for construction use.

If you are using it on nonmetallic objects, the cheaper acetic-acid sort
is fine, because corrosion isn't an issue.

>Or, perhaps can anyone suggest a better adhesive for this purpose??
>Thanks for any suggestions you may have.

What is the plastic? And is the rubber actually rubber or silicone?
RTV is actually a very poor adhesive, and it shears very easily. But it
is an excellent fill material so if you have open-cell foam, it will grip
it well.

To cement foam rubber to most things, I would tend to use contact cement
(Super 77 or equivalent), because it is a much stronger adhesive and also
fills voids well. Not as flexible as RTV but still very flexible.

I had a Tektronix video monitor shipped back from the Tek repair depot
only 200 miles away. When it arrived, it was clear where the forklift had
gone in one side of the box, and where it had come out the other. UPS
refused to pay on the $6k of insurance until the judge told them they had to.
This is one of my reasons for my admitted bias against UPS.

> that box.

I've sent out and received many packages and have yet to have a claim filed. The latest was a complete computer system, monitor included. I find many stores here lately do not allow folks to have left over boxes as they once did.... but, in my stroke of luck, a local appliance store which sells TVs and such, has boxes of most any size and foam to boot. All for the asking. Tape can be had at a local discount store - for about $5, you get enough to do several packages. A few minutes of time and you can pack an item as good or better than the paid services (if you too have the stuff available). Now, I don't know if the stuff would survive being run over or dropped from an airplane, but certainly a drop from someone waist high or so. It's not rocket science to pack an item. Pack it as though YOU were receiving it. Would you want a flimsy packing job on an item you bought? NO. So, don't cheat them of good packing either. Some of my packages have weighed #100 or more and made it safely. It can be done.

IF you don't have access to a lot of packing foam, double up on paper, or crinkle it up. People toss news papers after reading, use them. Same with Paper bags. Double up or so - using a finned approach - of some boxes cut up. Save packing materials from packages sent to you. After a while, you will get enough to do a few with little cost outlay.

And you remember that the next time you cannot afford your share of
the taxes.

In the US, we are already sitting around 50% if you include
all governmentally imposed taxes and fees. (eg. sales tax; city, state and
federal income tax; city, county and state land taxes; excise taxes;
tolls; fees for using government facilities, parks, etc.; application fees;
professional and other license fees; duties; import fees;...)

Except that Germany in the 1930s was in economic and political turmoil
beyond anything the USA has ever experienced. They had rampant
inflation and unemployment, just for starters. Adolf & Co. fixed those
problems fast, then went on to unify, modernize and expand Germany
without any fighting until 1939, by which time nobody dared oppose
them.

Gary -

The date will be 1980 or earlier. I purchased a TS-530 in 1981, when it and the TS-430 were both new - and incorporated changes following the WARC-79 conference -- new bands (30, 17 and 12 meters).

Mid seventies.....it and the Yaesu FT-101 series came out about the same
time.

In any event, I ask myself the question "Am I better
off today than 4 years ago?" Answer: "No".

We are not responsible
for your lack of motivation and industry, either.

UPS sent my package to the wrong address, and basically they wanted me
to go get it. I felt it was their resposiblity, but after 6 days, I
went to the address they left it at and picked it up ... took me 15
minutes ... obviously the driver who left it at the wrong address
wouldn't admit his error, and was too lazy to go retrieve the package.

The one time FedEx did this they sent out the drive the following day
to retrieve my package from the wrong address, and I had my package 24
hours later.

Just my experience ...
Yes keep your fingers crossed

Clint

If that TVR has a DOC label on it, it came from the NWS. Years ago, we had them, and even a few Gonsets, in G-cans for operating on airports. Some of our sensors are out on runways, etc. and these provided the required comms with ground control to get around the airport. And, yes, they're really old and no longer type-accepted! We've been using Icom handhelds for years, now. A lot lighter, too!!! They do make OK aero-band montitors, though.

You know, I was in one of the towers at DFW about two years ago, and they actually still had a Gonset on the shelf as a backup to the backup to the backup. Made me feel good.

Harumph! I started shipping screwdriver antennas in sked 20 (thin-wall) PVC pipe, lotsa bubble wrap and foam, and end caps SCREWED down and TAPED. I would have thought there was no way to damage it! Without any visible damage to the outer package, The UPS sobs BENT the antenna mast. How could they manage to do that? It took one hellacious blow to do that.

USPS? Slightly more expensive and slow as stagecoach, but every one has arrived savely at its destination. To them, "Fragile" means fragile and they seem to take it seriously.

UPS does whatever they feel like doing. I once had a clearly
marked box from Amazon.com taken back to the distribution place. They
left a note saying it had to be signed for and handed to an adult --
no option to sign the note and accept responsibility for loss. This is
not a requirement from Amazon. I was told I'd have to come to the
distribution place and pick it up during business hours -- too bad if
they were only open when I was at work two counties away. They finally
agreed, after a lot of arguing, to divert it to my worlplace.

When I asked where the decision was made to require an adult,
they said it was "driver's discretion" -- if the driver felt they'd
had too many losses in an area, they could impose the requirement with
no way to review or override their decision..

My only recourse would have been to take time off work and
appear in person to sign a permanent agreement to accept unsigned
delivery of everything from that time on.

According to at least three friends who work for UPS, the
company decided years ago to avoid waiting for signatures as they had
done in the past. They calculated the extra delivery time provided by
not waiting would cover any losses due to theft.

Hard to get a job if nobody hires. And I don't
mean the local Wal Mart. In any event I'm voting
for Kerry no matter what you have to say. GW screwed
up the economy (or at least didn't fix it) and screwed
up with Iraq.

End of discussion.

4763. 833A Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-18 05:04:27 UTC
From: Roger and Ute Brown <rogerbrown@gci.net>
Message-ID: <10knger81ngcpac@corp.supernews.com>
Source record: 21924

I have an 833A tube which I will use for a special project. I notice, however, that it seems to have very small flakes deposited inside the envelope. From what I surmise, they apparently jarred loose from the "getter." Has anyone run across this phenomena before - and more importantly, could I expect the tube to function OK with these deposits?

I'd go to a hardware store & ask for some weatherstrip cement. That type
of job is exactly what it was designed for.

If the flakes are from the silver area on the inside of the envelope opposite the getter, your tube has lost its vaccuum. Not good for much except for display purposes.

Folks,

I was given a model OCX signal generator. It tunes 100k - 30Mhz.
Tried it our and it works.

It's in fair shape but has been apparently sitting ariund a long time.

It's free if you pick it up or the price of packing/shipping from zip
07737.
Pictures on request.

Regard's

Source record: 21931

I have a rather rare Drake PS75 Power Supply for the TR5 Transceivers. It is in very good shape both cosmetically and operationally. However, it has had a Kenwood/Icom Power cable wired into it. The regular Drake cable and plug are still there but would have to be rewired for 20 amp power position. It comes with the original operational instructions and schematic. Should not be too hard to bring it back to original.
Price is $95. Digital pictures available upon request. Thanks, Charlie Hugg, K5MBX

I have been using a Pyramid Gold PS-21K for 8 years now. In that time it has blown the bridge rectifiers twice and just 3 months ago it went belly up aggain. Turned out that 3 of the 4 pass transistors were fused.
This was cheaper to buy but in the long run looks to be more expensive for me.

I bought an Astron 20A in 1987. Sold it to a friend a year or so ago.
Zero complaints. I have an Astron 35A. Zero complaints.
These days a good switching supply should be smallest, lightest and most
cost-effective.
A power supply should give zero problems for decades.
I have decades-old Collins tube stuff that works fine and has never failed.
Companies that are allowed to advertise in QST, as has already been
mentioned, should be considered reputable.
Old line laboratory outfits like Kepco produce rock-solid products.
You get EXACTLY what you pay for.

What's the matter?
Did you work for John Kerry at Heinz,
when he outsourced all those jobs overseas?

I'm afraid I have little patience for
people who claim they can't find a job.
I don't have a college degree,
tons of money or youthful good looks.
If I want another job, I can find one in less
than a week; just takes some effort
and a willingness to be flexible.
I won't start at $75,000 a year,
but I can get my family by until
that opens up again. Sure beats
sitting on my ass, whining and crying
"I can't find a job! WAAAAAAAA!!"
Bull. You can find a job.
You just don't want the jobs you can get.
Who's fault is that?
If your Demoncrat buddies get elected,
they can stick their hands
in the working man's pocket (me) again
and give you some more food stamps.
Won't you be proud of yourself?

> In any event I'm voting
> for Kerry no matter what you have to say.
Lemmings do go charging off the cliff
no matter what anyone says. It's a shame.
Some people can be fooled into doing anything-
even voting for a scumbag like Kerry.

> End of discussion.
I don't blame you for running away.
I expect that from someone
the Demoncrats can buy so easily....

No, that's metal that has outgassed from the hot cathode and plate. It
happens when the tube gets some hours on it. Eventually it will fail.
You may well have a huge amount of life on it before it does, though.

The real fact is that David Stinson is an idiot, for once again posting
off topic junk to the rec.radio.amateur.* newsgroups. He's done it before,
and undoubtedly he'll do it again.

And everyone else who felt compelled to respond to this thread to do anything
but condemn Stinson for doing this has just added to the clutter.

The thread is clearly marked "Political Off Topic."
If you honestly didn't like it, you wouldn't read it
and you wouldn't contribute to it.
Since you do read and contribute to it,
we can deduce you are a hypocrite.
And since you are Canadian, we can also deduce you
are sticking your nose in where it doesn't belong
just so you can have something to bitch about
and pound your scrawny chest over.

Piss on you.

Regards,
me.

The tube should be still OK, just make sure that none of the bits are caught up between the cathode and grid, I have a couple of 813's with the same problem and they are still working fine for the last 2 years.

HELP Astron 70 amp PS
I have a astron 70 amp power supply and was hooking up a transmitter to it and I pulled the power supply closer to me and the positive wire came loose and hit the ground terminal on power supply.
Now when I turn it on you can hear the power supply turn on and the light on the power swithch comes on, but no volts comes up on the meter. I checked the terminals on the back and no volt, very little if at all.
The outside fuse is good.
I took off top cover and I don't see and internal fuse.
Is there a diode I should be looking for?
I'm sure it has to have some kind of protection if the wires are reversed.
Any help would be great.

Well, that makes it more difficult! You can isolate the section of the
set where the problem probably lies. The RF gain being inoperative
is a good clue, I'd start by measuring voltages on the stages it controls.
Look for miswired caps, defective new caps, solder bridges, bad or
not soldered connections... a sharp eye, some logic and patience
should lead you to the cause or causes.

Mario -

First comment is about the 2xEGC3338 ... these are rarely used in original production -- which leads me to believe that someone has previously repaired.

The trasnsistor specs can be found at: RF Parts www.reparts.com

Hi Les. I hope he didn't do that and damage any wipper contacts. I think he only replaced the easy to get to caps on the main chassis wich may be part of the problem. Wizard? No but I've worked on my share of radios. Just thought I'd ask. I figure R.R.A.B could use the topic? Thanks

4806. 7237 "Mystery Signal"

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-20 01:16:28 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <Mbq3d.1920$Bg5.157@trnddc07>
Source record: 21866

Greetings everyone.
Some of you may have heard of the "mystery signal"
that shows up on 7237 KC intermittantly
from somewhere around Sedona, AZ.

I looked at the spectrum of the clip and
found that all the intelligence is concentrated
above 1.5 kilohertz.
Most of the "good stuff" is located at
2 kiloHertz and higher.

I filtered out the stuff below
1.5 kiloHertz and enhanced the information
above on a sliding, linear scale going up
to 400% enhancement at 20 kiloHertz,
trying to "pull out" any scraps
that might be left.
I clipped out the carrier at 10 kHz
and did a noise reduction.

I passed the clip through a
product detector and produced two clips
with slightly different processing.
The two clips are available at the address below.
I found the intelligence to be
approximately 5-7 kiloHertz above
the detector LO.
While there are carriers evident at 1150
Hertz and also at about 10 kiloHertz,
they do not appear to be necessarily
connected to the "voice."
It is definitely speech,
though there is not enough of the
scraps of the intelligence left to make it
readily understandable. Cadence sounds
very much like a talk radio announcer,
but may be a ham.
Also might be in spanish, which I deduce
from what may be a couple of rolled "r"s.

I believe it's going to be an intermittant
parasitic from a spanish broadcasting station.
It can happen during the loudest
fraction of each word spoken,
which would help explain

the clipped intelligence. Many things can
cause this- even an air conditioner switching
on and off can create an electrical situation
where a parasitic can escape. That could
explain the "click" and the intermittent
nature of the signal.

If you speak spanish (I don't), please
listen to these two clips and see if
you can make anything out:
http://tinyurl.com/5g27e

If any ham in the area has a
wide band receiver (one without a single-sideband
or other narrow filter) that can record this
sound straight to their sound card with at least
20 KC of bandwidth, giving us intelligence to work with-
we might get an "ID" on this one.

Kind Regards,
David Stinson

That is such petty bull shit. Any idiot could see EICO on the damned package. IF the item happens to work with other equipment, so damned what. Listing an item which will "work" with another similar piece of equipment - is not the same as branding it with the name of that other piece of equipment. So, then... don't dare try to sell a set of "standard" Radio Shack test probes which would fit a majority of VOMs and label the brands they'll fit, like Fluke, Simpson, etc. lest some ass hole be offended by it. HOW DUMB. Some times, I really have to wonder about them. Some whiner probably e-mailed them. I can't imagine they edited it. They couldn't possibly check all ads.

You are correct. When I posted this and a couple of other items for auction,
I noticed in rec. radio.amateur.equipment that someone replied with the text
"Keyword Spamming" and that's it.
That was for another item where I commented "like Yaesu" ...but my guess is
that he just turned me in, and ebay shot down only one of my listings.
Funny, it was killed a few minutes AFTER the auction ended.
It really is a bad idea for ebay to get as involved as they do when it is an
area they know nothing about. Anybody in to Heathkits would likely be
interested to read or bid on an unassembled Eico from the 1940's
Oh well....they are letting their success spoil them!

> ritchi50@optonline.net

Rich -

Well you shorted the power supply output. Normally the crowbar protection circuitry cuts in and the fuse will blow.

First, NEVER open a power supply case/cover while it is still plugged into the AC mains.

Second, ALWAYS properly discharge the electrolytic capacitors before poking around inside a power supply. With a power supply of this amperage - it will have one or two very large capacitors that will still have stored energy after being turned off.

Now. Unplug the unit, come back in a couple of minutes (allow time for SCR crowbar to reset) and then plug into AC mains and see if you have voltage. If not, then some components have likely been damaged and will require replacing.

If you have little technical skill, the I would recommend repair in a "mentoring" process with an experienced technician.

A web site that may be useful for your troubleshooting is here:
http://www.kbt-dc-supplies.com/index.php

Astron schematic diagrams
http://www.repeater-builder.com/rbtip/astron-index.html

The Astron power supply has an overvoltage protection circuit that will clamp the output of the supply to near 0 volts when the power supply's output has gone over the predefined voltage above normal. In most Astron power supply's the point of overvoltage is near 15 vdc. When an Astron power supply has gone into protect, it must be reset by turning off the mains power to the supply for at least 10 seconds. This gives enough time for the filter capacitors to bleed down so complete reset is possible. Protection in the supply is afforded by the use of an SCR to crowbar the output when an overvoltage situation has occurred. The circuit that fires the SCR is very fast, and remains in protect mode until mains power to the supply has been dropped for at least 10 seconds.

Some areas of eBay would become quite useless if buyers were allowed to insert text that grabs your keyword searches. A seller automatically thinks he wants to attract the biggest audience, when what he really wants is the best audience.

If I'm looking for test leads, I'll search for that and some variations. But if I want Lafayette test gear, I don't want to see somebody who has test leads that, oh by the way, could be plugged into a Lafayette VTVM. Or somebody flogging an Eico, that looks sorta like a Knight or a Lafayette or a Heath.

I don't mind some useful or innocent text references that snag your attention; the OP seemed to be in this category. But it really burns me to drop onto an auction that seems only very vaguely related to my search, only to find that some spammer has listed 75 radio brand names just to be sure of snagging almost everyone. And since I often run 10 or so very targeted searches, I'll get to see that same dumb auction ten times. And I can guarantee you that I'll turn him in to abuse before I get to the tenth viewing.

The SCR DOES NOT fire on a short circuit condition. The SCR fires on overvolage conditions, not over current. The current is sensed, and if the current drain is exceeded, the output will fold back limiting the current to maximum the supply is set for.

Now, the SCR might have falsely fired, and in that reguard you might be correct in suggesting waiting several seconds with the power switch off.

OK, then here is one to go by YOUR example.... N.R.I. A school no longer in existence via mail for Electronics courses and others... I had NRI in my search bar and at one time - all I got was that which I was looking for... NOW... you get clothes and all other types of BULL SHIT. So your example is not working either. Same with CONAR - a division of N.R.I. Used to be you got their items. NOW you get much more. IT SUCKS. PART of that reason is because some ass holes don't know how to spell and the search engine brings it up or in the case of E-Bay, sticks it there. Like CONAIR for example, a maker of Hair Dryers and such. CONAIR AND CONAR are close, but one letter can make all the difference. SO, a typo OR misspelled word, gets it into the listing. ALSO, when you list, if you know HOW to list, there are "categories" to list in. SO, back to NRI - how do CLOTHES end up in an ELECTRONICS area? HUH??????? Talk about a screw up, there ya go.

IF using my example, I have a meter made by Lafayette and someone has a set of test leads or other parts maybe a meter movement, knobs, etc. which will work on that item, so be it, let them post under the name... at least I know when I punch it in, I can find it. E-Bay ads are like news papers and news groups.. Skip what doesn't apply. You can usually tell in a glance as most have a picture in the listing. At least in this case, items relating to the Lafayette listing - even if exact replacement parts After Market - will get me what I need. I'd rather sift those ads than finding Denim Jeans under a Electronics area listing. The worst case scenario I can run into for Lafayette, is if typing in that word, and finding say a book on the man - Lafayette... or say the company's catalogs and so on. But to me, that is to be expected. If I want Lafayette Radio, then I need to input that, still I will get some catalogs from the company show up. It may bring up a meter or such as well, that they sold. After all, they did go by Lafayette Radio Electronics. There are many variables there. Your example isn't cut and dry. It still leaves room for error as does mine.

Some are just too lazy to skip over stuff and complain because some one got something not to their liking in a description. This guys ad was not deceptive in my book and I don't think he should have been called on it. Why not worry about the scammers and pay more attention to that than some petty bull shit like this. When writing the ad, some are too damned lazy to read what may be in front of them. I've seen some ads which had such horrific spelling, that alone chased me away. I can't believe how dumb some people are. Didn't they learn how to spell at least, even if their writing skills, like mine, suck? Not everyone is a professional ad writer or writer in any manner... But there is no real time limit I've seen when putting an ad in, shy of what you set. SO why not take TIME to do it at least half decent if not 100%. Come off as an individual with some common sense even if you have

no clue what you're selling that you've picked up at some Estate Sale. Use your spell checker OR a dictionary. READ the labeling on the instrument or package. IF YOU can't spell, then copy it word for word from what you see.. I have to think if you're placing an ad, you CAN read!

Let's just say I agree to disagree with your logic. You have a point, I won't deny that, but it is a weak one as it can't be 100% applied. The bad part is, I'm afraid it will only get worse as E-Bay continues to grow and the declination of our country's spelling and other skills continues.

And, as I always say..... when you're the buyer, NO ONE held a gun to your head to make you hit the enter button to bid. IF ANY THING looks wrong about the ad... DO NOT BID.... How damned hard is that to understand? For Christ's sakes, if you don't like something, like in a store... WALK AWAY. NO ONE makes you spend your money. People really piss me off, crying the blues like they're being robbed at gun point when THEY were the one to agree to it. A big part of the problem are the ass holes who are clueless on how to spell and those who can't make a sound decision to walk away from a situation which they can't see beyond black and white. ANYONE who knew Electronics items would have known what this man was selling. "I" had not problem with it, I'm sure many others didn't either. IF you do not know what the hell you're looking at then you have no business buying it. WHY cry about it? HOW LAME.

The only thing about this man's ad that caught me - was no cable included! Strange for a kit, but hey! I have the option to bid or walk. I don't know why EICO sold it that way, maybe they intended it to be wired to the cable for your particular unit regardless of make as just a "replacement probe - only", I don't know what their intent was. I've made RF Probes here in my shop from scratch, no big deal. I seen the kit and well, I have a ton of cable here, so I'll bid. MY CHOICE. I prefer kits when I can get them instead of scrounging for parts. If I'm not happy when I get it, TOO DAMNED BAD. I will have no one to blame but me. The ad in itself was descriptive as to what is being offered or not included. In this case, like most in my case, if it doesn't pan out for the intended use, it will for other projects. I'm always building or modifying something. That is no worse than me going to a ham fest and buying a box of miscellaneous components for say $5 to get "A" part. The rest will be used at some point. For that $5, I've gotten upwards of $50 in parts. Not a bad investment when you're into USING the stuff. It is a waste only when you do not. If I don't use it to build or modify, then it will be for repairs, as most of what I've bought are still in packages. And regardless whether I buy from a company or Hamfest I ALWAYS test components before installing. I learned that way back, not to trust any parts even if new in package. I only buy things also, which I know I have a chance of doing something with, should it not pan out per the ad. After all, not all ads are honest as to working OR very questionable to say the least such as "it lights up". WHOOPPIEEEE. IF I can't use it for parts for a unit already on hand, repair it should it not work, use it in some way, then I WILL NOT BID - no matter how the ad is written.

Is there a better way? Maybe, but will it satisfy all who use the system or eliminate the errors humans make? Probably not. As I said, I agree to disagree with you. Any points or references I have made past the first paragraph, were not meant to be derogatory towards you personally Mr. Price- NOR does the words you/you're/you've - mean YOU (Mr. Price) personally - the only exception being using your example in the first paragraph of my reply which I don't agree to as being a good one.. So, I hope you don't take it as such. I write this as others would (and will) read it as well. Maybe even those it certainly applies to.

Better to check the easy items first, before disassemblying the pass transistors (2N3055 or 2N3771) to check them and replacing the LM723 --- which are the usual suspects.

Motorola Application Notes written by Helge Granberg are good resources,
since most early RF designers heavily copied this design (especially since
the Application notes provided schematics and PC board silk screen layouts)

Source record: 21882

Ah, yes Nebraska Surplus, bought out the stock left when the company folded!
Yes they sell the stuff, however, they have no idea of what they are
selling, as in
you can buy the channel boards, they will sell you all you want, except the
manual
for the SR-206/210 calls out specifically for different coils on the boards,
which will
allow you to cover the portion of the spectrum you want. So you order the
boards
and get all the same type, sited in the wrong part of the spectrum, which
makes
them worthless, however each channel board is 65.00 apiece!

I tried them, explained exactly what I wanted, and still they sent me crap,
and
would not let me return it. I don't think anyone there bothers to read the
manuals
they say they have for the units or they would understand that is a problem.

So thanks for that info, but I won't deal with those guys as they are
outrageous!

Has anyone used any of the Transworld sets? I have used the original PRC-1099 and found the receive quality seemed rather poor, but I am told the newer PRC-1099A has a much better quality receiver.

Compared, with, say a GRC-106, how does the PRC-1099A really stack up? Compared with a KWM-2?

I really would like a radio with the functionality of the PRC-1099, but I'd like it to actually work well, which the original PRC-1099 did not seem to do.

Hello!

I have a Hallicrafter-combo, SX-117 + HT-44, with a well-built
powersupply.
After not having activated the TX for say abt 10 years , 2 years
ago I tried a contact on 80, however got a report of very severe hum,
switched off, suspecting the PS-HT-capacitors, took them out,
measured too low resistances, started to rejuvenite them but not
trusting them anyway bought some new ones, but! roughly
the same voltages and capacitances are contained in a volume
abt 20% of the originals, what happens with heat dissipation,
are modern caps really so lowlossy? Can I use them, don't
want any explosions in my basement!!
What's the experts verdict!

Yes, modern capacitors are MUCH smaller than the old ones. It's wonderful!

If possible, you should use the capacitors rated for 105'C use. They will
last much longer than the originals.

The newer types are much more efficient. Most of the gain is due to the improvements in materials science and chemistry. I haven't any catastrophic failures in many rebuilds and replacements, but that's not saying it could never happen. Do be sure to get the polarity right the first time.

The possibility of something going "boom" is always there with old tube gear. Isn't that what makes it fun? I tell people running a vintage transmitter is a lot like operating a steam locomotive. You aren't allowed many mistakes.

You dish it out pretty good yourself Les. I don't remember you being very nice in some of the stuff you wrote. Discrediting peoples veiws for not being in the military is a cheap shot but I understand why you would think that and it may be true with some but I'm no right wing wacko or a war munger and I didn't start the flame war over politics on RRS. You know the ones that do. Try not to hold to big a grudge against me. I'm not as bad as you think. By the way I got the radio working. Thanks for signing my guestbook and your right I am no SP-600 expert but they are nice radios to work on. I got a JX-17 awaiting restoration too and its the second one I've owned. The first had disk caps but this one has those damn black beauties.

Per -

The new capacitors are much smaller -- and allow for "restuffing" older
sized components (when required).
Here are some good web pages to review for replacing capacitors (bookmark
for future reference).

Tim Reese's great article
http://www.nmr.mgh.harvard.edu/~reese/electrolytics/

ABCs of capacitors
http://www.justradios.com/captips.html

Phil Nelson's "Replacing Capacitors in Old Radios"
http://www.antiqueradio.org/recap.htm

Rebuild an Electrolytic (2 photos demos - R390A and AC-4)
http://r-390a.us/filter_capacitors.htm

http://www.wb4hfn.com/DrakeArticles/TechTips/FilterCapacitorRebuilding.htm

Need an axial? (and only have radials)
http://www.wb4hfn.com/DrakeArticles/TechTips/ElectrolyticRelacements.htm

Worried about looks for a historical restoration (Smithsonian caliber) ?
http://www.earlytelevision.org/capreplace.html

Finding modern HV capacitors for restorations
http://www.justradios.com/capacitors.html

Same with me, I couldn't detect any "spanish".
NS

4834. Fall Classic Exchange (CX)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-21 02:42:37 UTC
From: Mark K3MSB <bell@blazenet.net>
Message-ID: <10kv58o3jd2oacd@corp.supernews.com>
Source record: 21893

Fall 2004 Classic Exchange "CX"
September 24-27

The CX is a no-pressure contest celebrating the older commercial and homebrew equipment that was the pride and joy of ham shacks many decades ago. The object is to encourage restoration, operation and enjoyment of this older "Classic" equipment. See the CX website for history, rogues gallery and recent contest newsletters: http://qsl.asti.com/CX.

The Fall CX will again be held concurrently with the AM International AM Discovery Weekend to encourage more participation in both events as well as addressing the desire for more CX operating time. The AM Discovery Weekend brings many classic AM transmitters on the air and raises the awareness of the presence and fun of AM. Details of scoring and awards are published in ELECTRIC RADIO magazine.

AM QSOs exchanging the usual CX data may be made for CX score throughout the weekend.

The traditional CX contest, including CW, SSB and AM will be on Sunday. There will be CX recognition for high scores in AM, SSB and CW as well as overall.

You need not operate a Classic rig to participate in the CX. YOU MAY USE ANY RIG in the contest although new gear is a distinct scoring disadvantage. You can still work the "great ones" with modern equipment.

WHEN - WHERE - WHAT
The AM Discovery Weekend begins Friday evening September 24 and ends Sunday evening September 26, 2004.

The traditional CX will run from 1300 UTC September 26th to 0700 UTC September 27th
(9 AM Eastern Time on Sunday to 3 AM Eastern Time Monday)

CW: Send "CQ CX"
Phone: Call "CQ Classic Exchange"

SUGGESTED FREQUENCIES:

CW: 1.810 3.545 7.045 14.045 21.135 28.180 Mc.AM: 1.890 3.880 7.290 14.286 21.420 29.000 Mc. SSB: 3.870 7.280 14.270 21.370 28.490 Mc.Exchange your name, RST, QTH (state US, province for Canada, country for DX),
receiver and transmitter type (homebrew: send final amp tube or transistor type), AMI number if available (AM only) and other interesting conversation.

The same station may be worked with different equipment combinations on each band and in each mode.
Non-participating stations may be worked for credit.

SCORING
Calculate your score for each mode (CW, AM, SSB) and total those scores for your overall CX score.

For each mode:

Multiply total number of QSO's (all bands) by the sum of
the number of different types of receivers plus the number of different transmitters you worked (transceivers count both as a transmitter and a receiver)
plus the number states/provinces/countries worked on each band.

Multiply that product by your CX multiplier, which is the total years old of all receivers and transmitters used in all modes. The same CX multiplier is used in computing the individual mode scores.
Each receiver or transmitter must be used in a minimum of three QSO's to be counted in the multiplier.
If the equipment is homebrew, count it as a minimum of 25 years old unless actual construction date or date of its construction article (in the case of a 'reproduction") is older.

Total QSO's all bands
times
RCVRs + XMTRs+ states/provinces/countries
times
CX Multiplier:

SCORE= QSO's x (RX +TX+QTH's) x CX Multiplier

Certificates and appropriate memorabilia are awarded every now and then for the highest score, the longest DX, exotic equipment, best excuses and other unusual achievements.

Send logs, comments, anecdotes, pictures, etc. to J.D. "Mac" Mac Aulay, WQ8U at

WQ8U

or by mail to:
WQ8U
6235 Wooden Shoe Lane
Centerville, OH 45459

The CX Newsletter and announcement of next CX will be posted on http://qsl.asti.com/CX.

4835. FS: MANUALS HALLICRAFTERS VIKING ETC

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

Here are a some items for sale. Prices do not include shipping. I will ship overseas.

Military Multimeter ME-260/U with RF Probe.....$65 plus shipping
Nice working military unit with RF probe. This appears to be the same probe as used with the HP410 series of meters. Missing back cover.
http://members.cox.net/radiostuff9/mil_vtvm3.jpg
http://members.cox.net/radiostuff9/mil_vtvm4.jpg
http://members.cox.net/radiostuff9/mil_vtvm2.jpg

Digital Precision 2440 Nixie Tube DVM.....$40 plus shipping

This unit will measure DC and AC voltage, and Resistance. This unit has been tested and works. It does not include a power cord.
http://members.cox.net/radiostuff9/dp2440.jpg
http://members.cox.net/radiostuff9/dp24402.jpg

Hewlett Packard HP 400E AC Voltmeter.....$35 plus shipping
This is a tested and is a working unit. It does not include a power cord. It does include a copy of the manual on CD. I have several of these units
http://members.cox.net/radiostuff9/hp400e.jpg
http://members.cox.net/radiostuff9/hp400e2.jpg
http://members.cox.net/radiostuff9/hp400e3.jpg

Hewlett Packard HP 410C Voltmeter.....$20 plus shipping
Not working. It does not include a power cord or RF probe.
http://members.cox.net/radiodx3/hp410.jpg
http://members.cox.net/radiodx3/hp4102.jpg

RCA Type LM-1 Multimeter Plus Parts Unit.....$45 plus shipping
This is an unusual looking Bakelite cased VOM which is from the late 1940's and early 1950's. Measures volts from 3 to 1000 ac and dc volts, 1 mA to 1000 mA DC and resistance. This unit is in excellent condition. Also included is a 2nd non-working unit. The non-working unit has a free movement. I did open up the inside and it is clean with no evidence or of abuse or arcing. It is missing the battery cover which is just a flat piece of plastic.
http://members.cox.net/radiostuff9/rca_lm12.jpg
http://members.cox.net/radiostuff9/rca_lm13.jpg
http://members.cox.net/radiostuff9/rca_lm1.jpg

Vintage Westinghouse Portable DC Voltmeter.....$35 plus
shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are
changed by making the appropriate connections to the meter. The ranges
are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
The instruction card on the inside cover has a date of 1942.

Hi G.Beat,
I have watched between my books and the technical notes of the Motorola but
I have not found that that I try.
Several schematics show only the ends transistors and some time the pre-ends
transistors.
I have the impression that in order to polarize the ends transistors, this
board mounts 2 transistors TO220 with base-emitter connects together and
connected in series between of they in place of diode .

Ciao IK6GQC

I have a TW 100 and it is a very well made and well engineered HF xcvr. Rcvr seems as good as any I have used and better than some. Have played it side by side with a JRC marine xcvr and rcvr performance was indistinguishable, both very good. Ergonomics are a bit clumsy, have to refer to the manual to do a channel scan etc, but it does a great job once you get it figured out. Internal shielding must be seen to be believed, milled out module boxes with ckt bds inside and mini hardline coax connecting them are the norm. No flimsy sheet metal cans in this rig. Must have cost a fortune to mfr. Front panel is kind of geeky, cheap looking keypad and knobs, doesnt look military. They go for $300-$600 on eBay. Some have built in SELCAL. Some have USB only. MANY different front panel layouts for the same model TW 100... mostly just relocating certain knobs. TW 100s have some settings that require a combination of rotary and toggle switch activations. Not especially user friendly, but a fine rig. 110-220 VAC internal PS is nice.

4846. New program "Not a Trap"

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-22 21:43:29 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <cisrm1dro1@sparta.btinternet.com>
Source record: 21807

Extract from program notes.

Program Name: NOTATRAP.exe Author: R.J.Edwards G4FGQ

A TWO-BAND ANTENNA WIRE LOADED WITH AN L & C PARALLEL-TUNED CIRCUIT

The LC parallel-tuned circuit is constructed exactly like an antenna trap. It
is located in the antenna wire and used as L or C loading at 2 other resonant
frequencies. Parallel-tuned circuits have a reactive impedance on either side
of resonance. On the low frequency side there is a +ve inductive reactance. On
the high frequency side there is a -ve capacitative reactance.

The purpose of the LC loading components is to detune the antenna wire from
its natural 1/4-wave resonant frequency. When the loading circuit is behaving
as an inductance the antenna resonant frequency is reduced. When the loading
circuit is behaving as a capacitor the antenna resonant frequency is increased.
The pair of resonant frequencies depend on the LC ratio, on wire length, and
on the location of the LC loading circuit along the wire.

For a given loading location along the wire and a given pair of resonant freq-
encies this program calculates the L and C loading-component values. The pair
of frequencies lie above and below the unloaded resonant frequency of the wire.
The LC circuit behaves as an ordinary trap at its own resonant frequency which,
by experiment, can sometimes be arranged to fall into a third amateur band. But
to calculate such a fortunate coincidence is beyond my elderly patience.

The program has a built in signal source which generates a wide-ranging
testing frequency which can be used to 'measure' the input impedance of the
antenna versus frequency, checking resonant frequencies and other antenna
characteristics.

Download program NOTATRAP from website below and run immediately.

The lack of a real tuning knob seems disturbing. How is it just for scanning the band? The PRC-1099 at least has the up/down toggle, which is crude but usable.

From: Dave <davidgregory@eastlink.ca>
Message-ID: <ImJ4d.71724$vO1.385452@nnrp1.uunet.ca>
Source record: 21814
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I recently acquired 2 HT's from an army surplus store and I am at a loss finding information on how to re-program them for 2 meters.

I'm posting to see if I can jog anyone's memory on these old radios for scraps of information.

The HT's are made by Canadian Marconi Company, model DP-2071 which have a frequency range of 136-174 MHz and 5 watts output. The EEPROM inside is a MCM 2802 device, 14 pin.

So far the information I have come up with is that the EEPROM is a 32x32 bit device.

Thanks,

Dave, VE1DAY

4854. FS Drake PS75 Power Supply

Newsgroup: rec.radio.amateur.boatanchors

From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <wHJ4d.32$gk.13@okepread01>
Source record: 21815

I have a rather rare Drake PS75 Power Supply for the TR5 Transceivers. It is in very good shape both cosmetically and operationally. However, it has had a Kenwood/Icom Power cable wired into it. The regular Drake cable and plug are still there but would have to be rewired for 20 amp power position. It comes with the original operational instructions and schematic. Should not be too hard to bring it back to original.
Price is $85 plus shipping from 79602. Digital pictures available upon request. Thanks, Charlie Hugg,
K5MBX

>alt.sex-toys? Sorry, couldn't resist.

I don't know how to test them, other than to apply power and load to them
and see if they buzz.

Replacement units should be available from Antique Electronics Supply, and
there are some solid-state replacements being made today as well.

They are really just a buzzer in disguise... open one of the bad ones up
and see if the contacts are bad or the coil is open. Contact cleaning
may make it come right back up again. Coil rewinding is no fun.

If you plug one in and it doesn't work, rap it smartly with the handle
of a screwdriver. Sometimes the contacts cold-weld themselves together.

4867. FS Drake R4B & T4XC

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-09-26 01:37:41 UTC
From: wrhood@exis.net
Message-ID: <41561cb1.1270821@news.exis.net>
Source record: 21828

I recently acquired a Drake R4B with MS-1 and a Drake T4XC
from a radio club's holdings that had not been used or checked out for
3-4 years. The R4B is S/N 13XXX and the T4XC S/N 20XXX. The R4B has
12.6 MHz, 13.1 MHz and 13.5 MHz extra crystals for the 160 meter band;
plus 39.1 MHz, 40.1 MHz and 40.6 MHz crystals for the 10 meter band.
The T4XC has the 12.9 MHz crystal for the 160 meter band. Both units
are in the Drake condition "Very Good Condition", however the R4B does
not tune. You can hear signals passing through the IF, possibly in the
5 MHz area. I do not have an AC-4 to check out the T4XC, so I can not
check it out.
I would like to get my money back and payment for the packing
and shipping from 23320 to the buyer. I'll ship radios and manuals for
$300 plus packing, freight and insurance upon receipt of cashier's
check or after personal check clears (10-12 days).
I can be reached by telephone (757) 487-0357 [leave message if
no answer] or by e-mail <wrhood@exis.net>. K4WYS

Hi Guys:

Yesterday I was fortunate enough to pick up a few more Boatanchors
for the collection.....Another RACAL RA-17 with ISB Converter, and an
EICO 720 Transmitter. The Transmitter is in Nice Condition both
Physically and Electrically...a Real Cool Looking little Rig!!
I do not have the Manual for this yet.....so don't know much about
it...except that it's supposed to be 90 Watts CW and AM????
Has anyone out there got one of these...or have you ever used one??? I
would appreciate any comments on the Rig either Good Bad or Ugly!!

Is it possible to hook a Microphone directly to the Rig??? I see there
is a Plug on the Back of the Transmitter that says "Modulator"......Do
I need something in between the Mic and the Transmitter...or can a
Mic just be wired to that plug and away we go???

Any info, advice, comments pertaining the the Eico 720 Transmitter are
greatly appreciated!

you're missing the optional hi-level plate modulator. They show
on eBay occasionally in the 100 to 200 dollar range. It's bigger
than the basic 720 package, IIRC...

My memory wants to say it's the Eico 730.

Pete

The 720 has a good reputation.

>Is it possible to hook a Microphone directly to the Rig???

No.

>is a Plug on the Back of the Transmitter that says "Modulator"......Do
>I need something in between the Mic and the Transmitter...or can a
>Mic just be wired to that plug and away we go???
>
The 720, IIRC, is a CW-only rig when used by itself. It requires an external
modulator capable of about 45-50 watts of audio in order to run AM. Eico maded
the model 730 modulator to match the 720 transmitter, and provide
plate-modulated AM.

Hooking a microphone to the 720 modulator socket will simply destroy the
microphone.

Hi, Rob

The Eico 720 a nice c.w. transmitter. A connector is included
on the back for connection of an optional plate modulator.

A friend from my old radio club used one on 80m.
He was ten miles from me, and I could tell his TX by the slight
key clicks. The Eico has cathode keying, so beware
of simply plugging in a keyer unless it uses a relay output.

http://BAMA.sbc.edu has a manual, but it is in DJVu format.
If you would like a stand-alone DJVu viewer program
for Windows, I can fix you up.

The 720 was my first rig back in early '60's. It was a nice looking rig
and a good performer for many years. As others have mentioned it does
require an extenal plate modulator for phone operation. I still have its
other companiion piece, the Eico 735 VFO, acquired when I no longer had
to be crystal conrolled.
If you ever see the old "Andy Griffith Show" reruns, you will notice
that a 720 sits on the radio desk with a mike plugged into the key jack.

Never quite figured how that was supposed to keep Andy and Barney in
touch!

> power supply ???

Well, a lot of people reccomend Astron, but their equipment is no
better nor worse than others.

As far as a commercial built supply, I'd reccomend the GE Mastr II
Power supply -- weighs a small ton, but is built to go through world
war three and back. They're available for around $50 at hamfests or
via E-bay. Just be ready for the shipping cost, as they are around
60-70 lbs.

Motorola made a high current supply for their Micors, etc. which is
similar in weight and quality.

The things I'd look for in a NEW power supply would be --

Switching mode versus linear pass transistors. This minimizes heat
dissapation and makes for a far lighter power supply.

SCR voltage overprotection, which blows the fuse if the voltage goes
over 16v.

Adjustable current limiting or foldback. 30+ Amps can cause a lot of
damage real quick if a major short happens in your gear that a fuse
may not protect in time.

Remote voltage sensing. By using another pair of wires connected to
your power plug at the radio, the regulator compensates for the
voltage drop in the primary leads. Very handy if you have power leads
in excess of 3-4 feet.

Rob,

The companion modulator must be used for AM operation, the basic rig is just CW.

73s,

Evan

4887. Apache and Other Gear

I have an excellent Heath Apache/SB10 for sale. It is very clean, unmodified and includes an E.F. Johnson low-pass filter, a Dow-Key changeover relay and the original manual. This is a wonderful old transmitter and is in great shape.

Some other items available are:
(1) An especiallly clean and functionally perfect HP 201C audio signal generator,
(2) A pristine, laboratory grade, Hewlett Packard HP412A VTVM. This looks virtually new and is a gem. It's both a perfect example of HPs best lab equipment of the 1960s and still a useful piece of bench gear. I thought I would own this one forever but things change...
(3) An enclosed 15 amp Powerstat variac that looks almost new.

I'll be taking all of these items listed below to Hosstraders on Oct 1-2. For those who are not familiar, HossTraders is a wonderful hamfest occupying most of a fairground in Hopkinton [southern], NH.

I am not eager (or even willing) to undertake shipping the Apache. If you are interested, consider that you might:
(1) Pick it up at my home in Ridgefield [very western] CT,
(2) Meet me at Hosstraders (The Fall foliage will be near it's peak), or
(3) Alternatively, delivery *MAY* be possible in the Northeast between NH and Washington, DC.

Direct any questions to: denis.sharon AT att DOT net or call 203-431-8181.

Regards,

Denis Sharon W1AOK
Ridgefield, CT

The Department of State used these things as replacements for the old
Collins KWM-2A. Non-technical types can be instructed to turn it on and
leave it on a particular channel or to place it in Transcall. Despite
what looks like meticulous engineering and the overkill on shielding,
the rig is a dog if placed in an environment where a high power
transmitter is being used. The receiver front end folds up and the
Transworld becomes really deaf, even if the nearby high power
transmitter is on a frequency many MHz removed from the one to which the
Transworld is tuned. As the transceiver is designed for a
point-to-point operation on specific frequencies, it is a bugger to use
when scanning a band of frequencies.

Rob,
The Eico 720 requires the Eico 730 Modulator for AM, and it will work better if you also have the Eico 722 VFO. I my station I also use the Eico 717 electronic
keyer for CW work. I have the 723 transmitter and a separate 730 modulator for it.

The manuals are available for all of the Eico ham equipment at the "Bama" site.
I have several pictures of the other equipment at:
http://eshop1.chem.buffalo.edu

You will definitely need a modulator to run AM with the unit. I also advise not to
turn it on without a jumper between pins 4 and 6 on the rear octal socket.

The rigs are good low power AM/CW station equipment, and provide for switching
115 VAC to drive a TR-relay out of the rear socket also. LP CW is great fun.

I use an EICO 720 nightly on 80 meters. I bought and built mine in the mid 1960s. Although I never get one phone I have used it on AM in years past and know you can easily adapt most any ham modulator. The EICO 730 actually did not get the audio reports as I did when I used an old WRL modulator. Good rig. Key clicks on some, it never plagued me on mine but some were able to clean them up just by placing a 0.01 capacitor between the key terminals. Good luck and enjoy!

The Wonderful World Of Disney. "In COLOR" "NEW!!!"

Group: alt.disney.disneyland Date: Tue, Sep 28, 2004, 2:10am From: SeaView-USA@webtv.net (Captain Crane)
Sunday night 7 pm west coast time U.S.A
KNBC Channel 4 Los Angeles.
The World is a Carousel of Color, color color(echo) Wonderful Wonderful Color....
Tonight show on the Wonderful World of Disney is " Go Out and Vote "
And now your host Walt Disney....
Walt Disney : Its that time again. 4 yrs go by and its time to Vote again for a new President. With Terrorist out in the World and the USA needs more jobs this is a very important time in American History. Im not to keen on the 2 nominations for president. Each one has a flaw or two and each one of the parties is fighting with one another. I saw the Movie F-911 by Michael Moore and I was very upset at what I saw President Bush was doing or allegedly doing to our country. But as the months have gone by and now were closer to the election now then ever we must start weighing the facts - the good and the bad for each of the parties. Now lets start with Kerry first. He does not have a solution on ending the war ASAP. Also he has not talked about our Economy and how he can build it back up. What can Kerry do that can help America ?. He could make things worse. That is a Decision for you to decide. Now President Bush has flaws too but after careful consideration and weighing out many facts I feel President Bush is the right man for the Job. Now I know he went to war way too soon with Iraq and he has taken more vacations then any other president in history. But he has shown to be a leader for america. I feel the next 4 years if President Bush is Elected he will change the flaws he has shown and will bring about the changes that are needed in the United States for more Quality Jobs and he will show the world to stand up to Terrorism. If Kerry is Elected I feel Terrorism will get worse.
Also Think about this. If America has a Serious situation and the President needs to take action may it be War or the Economy President Bush can always Ask his Father who was President before for the right advise. This is like having 2 Presidents in the White House and America will be much better secure by this. Now if Kerry is Elected he may stand up and say in a crises to his people - What should I do , I don't know what to do. Someone from his cabinet tells him what to do and that is not the right way of going about it. He should never ask advise from his very low subordinates they will tell him what they want him to do. The advise Kerry gets will probably be the wrong advise and this advise could Ruin America. These are Things I want you to Think about when you go out and Vote. Do your Home Work and ask Questions to yourself about

the canadates. See if they meet or exceed your expectations and vote for the best one. Your Vote Counts.
Hey Tinker Bell are you going to vote ?... Tinker Bell knods her head saying yes.
Walt Disney : Now lets all Sing.... "Its a Great big beautiful tomorrow and tomorrow is just a dream away. Man has a Dream and thats the start he follows his dream with mind and heart. And when he turns it into a reality its a dream come true for you and me......

Here are a some items for sale. Prices do not include shipping. I will
ship overseas.

Military VTVM ME-260/U with RF Probe.....$65 plus shipping
Nice well built working military unit with RF probe. This appears to be
the same probe as used with the HP410 series of meters. Missing back
cover.
http://members.cox.net/radiostuff9/mil_vtvm3.jpg
http://members.cox.net/radiostuff9/mil_vtvm4.jpg
http://members.cox.net/radiostuff9/mil_vtvm2.jpg

Digital Precision 2440 Nixie Tube DVM.....$40 plus shipping

This unit will measure DC and AC voltage, and Resistance. This unit has
been tested and works. It does not include a power cord.
http://members.cox.net/radiostuff9/dp2440.jpg
http://members.cox.net/radiostuff9/dp24402.jpg

Batch of W.W.II Crystals.....$40 plus shipping
39 Crystals. See photo for frequencies. Here is a link to the frequency
conversion chart http://members.cox.net/n7rk/ft241_xtal_list.jpg
http://members.cox.net/radiostuff9/xtal_batch.jpg
http://members.cox.net/radiostuff9/xtal_batch.jpg

Nye Speed-X Chrome Telegraph Key.....$45 plus shipping
http://members.cox.net/radiodx3/chrome_key.jpg
http://members.cox.net/radiodx3/chrome_key2.jpg

Hewlett Packard HP 410C Voltmeter for Parts or Fix
It.....$20 plus shipping
Not working. It does not include a power cord or RF probe.
http://members.cox.net/radiodx3/hp410.jpg
http://members.cox.net/radiodx3/hp4102.jpg

RCA Type LM-1 Multimeter Plus Parts Unit.....$45 plus shipping
This is an unusual looking Bakelite cased VOM which is from the late
1940's and early 1950's. Measures volts from 3 to 1000 ac and dc volts,
1 mA to 1000 mA DC and resistance. This unit is in excellent condition.
Also included is a 2nd non-working unit. The non-working unit has a free
movement. I did open up the inside and it is clean with no evidence or
of abuse or arcing. It is missing the battery cover which is just a flat
piece of plastic.
http://members.cox.net/radiostuff9/rca_lm12.jpg
http://members.cox.net/radiostuff9/rca_lm13.jpg
http://members.cox.net/radiostuff9/rca_lm1.jpg

Vintage Westinghouse Portable DC Voltmeter.....$35 plus
shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are
changed by making the appropriate connections to the meter. The ranges
are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
The instruction card on the inside cover has a date of 1942.
http://members.cox.net/radiostuff9/west_meter2.jpg
http://members.cox.net/radiostuff9/west_meter.jpg

Chicago Standard - 4 Henry Choke Mil-Spec.....$15 plus
shipping
4 Henry, 250 mA choke made by Chicago Standard Transformer Corporation.
I measured a dc resistance of 61 ohms with my Fluke 87.
http://members.cox.net/radiodx3/choke.jpg
http://members.cox.net/radiodx3/choke2.jpg

Set Of 10 Knobs (Some Matched).....$15 plus shipping
http://members.cox.net/radiodx3/knob_set.jpg

Set Of Six Knobs.....$10 plus shipping
http://members.cox.net/radiodx3/knob_set2.jpg

Unknown Microphone #1.....$25 plus shipping
Neat Brushed aluminum housing. Manufacturer is unknown. Needs a new
cartridge which you can probably get from Radio Shack to work.
http://members.cox.net/radiostuff9/weirdmike.jpg

Unknown Microphone #2.....$25 plus shipping
Manufacturer is unknown. This does work and was hooked to a Ranger I
when I got it.
http://members.cox.net/radiostuff9/odd_mike3.jpg

Philips 4-65A tube with Ceramic Socket.....$35
Build something! I did check the filament for continuity and it is OK.
No other way to test. The beige sheet in the background makes the tube
appear burned which it is not!
http://members.cox.net/radiodx3/amp_465a.jpg
http://members.cox.net/radiodx3/amp_465asocket.jpg

Eimac 3C24 Power Triode Transmitting Tubes.....$10 each plus
shipping
I have two of these that are NOS tubes which are new in the box. I did
check the filaments for continuity
http://members.cox.net/radiostuff9/eimac3c243.jpg
http://members.cox.net/radiostuff9/eimac3c24.jpg

Thanks for looking.

Hi, Bill

Do a Google search for RME 4350A (ElectroVoice bought out RME).
BAMA has a manual in jpg format:
ftp://216.24.174.245/rme/rme4350a/

If your receiver hasn't been turned on in a long time,
you will need to reform or replace the HV electrolytic
capacitors. Do not just plug it in and turn it on
if it hasn't been used within a few years,
you may fry the power transformer due to a bad electrolytic
capacitor.

Regards,
Ed Knobloch

I think that beautiful swirly cloth was one of a kind. If you can find someone to make a custom reproduction, please notify this newsgroup. If not, I'm afraid you're reduced to haunting local fabric shops, etc., for something that looks close. I regret selling the S-200 that came with my HQ-160 (http://antiqueradio.org/hamm02.htm). Oh well, there's another fish in the sea.

There is a grille cloth supplier at http://www.grillecloth.com/ , but he specializes in consumer radio cloths.

No, we just have to put up with a bunch of ass holes who have nothing better to do with their time. Either juvenile delinquents or dick heads who don't know how to carry on a "conversation" so they have to post this stupid shit.

They ought to take their computer and shove it up their ass.

It is called keyword spamming which is designed to get a hit on an auction even though someone isn't searching on that name. Kind of a crappy way to get someone searching on Heath to get a hit on an item for Eico.

I still do not think the lister was at fault - at least not to the point of his ad to have been pulled. That was so petty. I've seen many items not affiliated with a brand, listed under it. Then there is category. Laziness may play a lot in this. Clothes being listed under an Electronics area. "IF" it was the SELLER who made the error in this particular listing, it was very slight in comparison to many others I've seen. I've seen much worse and I doubt it will get better. Spelling alone in many of them SUCKS. Some of them are written so horribly, the first few words are enough to turn me away. They write like they have no education or common sense. There was a long thread of "horrible" spelling in E-Bay ads about a year ago in yet another newsgroup. I realize not everyone is an "AD" writer, but to make so many typos or to spell so poorly! WOW..... I liken Newsgroup listings and E-Bay listings to a news paper. If it interests me, I read it OR if the first line of what "appeared" to be interesting - turns me off, I move on. I don't waste my time.

As it is, the probe having been discussed was relisted by the gentleman and was sold. It ended a couple days ago if memory serves me correct.

Looks like it has all the additional goodies that are really tough to find.
Such as the dynamotor. Also that unit is somewhat rare, .52 to 1.5. As
memory served those were used as a 'Q-multiplier' back in the good ole days,
or was it a selective IF? Been a while.

Dan/W4NTI

$4.95 NIB but I sure would like to know why the bidding went so high
on this one. I've seen lots better ones for lots less. Maybe the
spinner is rare.

No, it was the one that covered the 455KHz range that was used as a "Q-5er".
That one had an 85KHz IF, and did provide nice selectivity to an existing
receiver.

Q-multipliers were a regen stage added to an existing receiver. Put it
on the plate of the mixer feeding the low IF, and it provided a null or
peak.

The one under question covers the broadcast band. I gather those
were never made in the quantity of the others, making them rare to
start with.

But remember, the fact that they were so cheap and plentiful at one time
meant that people used them, and discarded them when finished with them,
like any commodity. It's almost sixty years since the end of WWII, and
each year decreased the number of Command sets in existence. When they
were common and cheap, nobody worried about perpetuity. But all these
decades later, the price rises as they become less common.

Back in 1972, I bought my first and only Command set, a transmitter
that covered 40Meters. I could get it at the local surplus store, which
still existed and still sold WWII surplus. I paid all of ten dollars for it.
Those surplus stores are gone.

Man, you're bringing back memories with that RadShack
battery/ashtray.....hope you find one.

I remember those funky ashtrays and the fact that you could smoke freely
inside the stores back then. Most retail establishments had ashtrays placed
in aisles and such. People would walk around puffing and dropping clinkers
inside stereo's, on top of displays....what a mess! Little kids would kick
over the ashtrays, and that crappy white sand would be a mess on the floor.

What ever happened to the good old days?

BTW, I was at a hamfest this Summer and passed up one of those Shack "free"
5-cell flashlights (all the flyers had a coupon for this item to draw in the
unsuspecting fools - - - little did they know that they had to purchase five
D batteries while in the store to get the darned thing lit).

Ahhhhh, vintage Radio Shack.

The broadcast ARC-5 is much more valuable than the BC-453 or the BC-454 (or the similar ARC series), because the broadcast versions were rare from the start and many of those that were available were converted for mobile radio use (and butchered in the process).

If you want a complete set of ARC-5 type radios, you need to purchase the rarer ones. Wonder what the ACR-5 transmitters in the broadcast band would bring - I know they exist but have never seen one.

I only have about 20 ARC-5 rigs left - and to think my wife wanted me to get rid of them.

Prices ebb and flow with the wind for these.
I just sold one in much better condition
for less than $100.
Next week, a perfect one may go for $40.
The week after, one drilled and spoiled like
this one may go for $300 again.
Just no way to tell.

That was a big bite for sure. The broadcast band ARC-5 was, years ago
three times as much as other ARC-5s.
This model is very popular with the broadcast people. Now for this one
no rational reason for the price.

I've had a 200-1 kit up above the bench set up as a crystal rcvr for awhile. It's good to have a way to listen to WSB and not put any burden on any power source other than a small battery for an audio amp.

While I definitely do not want one, I was thinking about the "morse
boxes" that I used to have as a kid. These came two to a set. It
was a painted steel box with a spring steel key, room for two
batteries, a three way switch that selected a light, a buzzer, or a
clicker.

The code was printed on the box. It came with steel wire.
Everything rusted right away.

I'm surprised that these don't show up on morse/FISTS sites, eBay.

"Joe", I really hate to break your flow, but how could anyone prove their boldness to you? You define their sincerity by their willingness to "show up at your door" for facial manipulation. Yet how is one to find your door? An address, directions, or even map coordinates, would be enormously helpful.

True, BUT, n6wig was willing to pay $311m and he has a FB of 143. Most other bidders dropped out under $100.

Nostalgia, a joke, a need to replace something exactly; you never know. But clearly, at this moment in time, at least ONE ARC-5 was "worth" $315.

I was a Radio Shack manager back in the early 70's, wish I had kept one of those ashtrays. I gave out thousands of those flashlights and there was absolutely no purchase required. If they made you buy batteries they were scammers and would have lost their jobs for it. The idea was to get you in the store and look around at the Hi-Fi or radios, not to sell 5 D cells. By the way the cops really liked them , maybe because the batteries lasted longer than the 2 cell jobs.

Well, he shouldn't be so "bold" as to call some one a yellow belly - who was not even in an argument WITH HIM, but agreeing with him. Sheesh. Just cause I chose to NOT give a real name or address as many others do. But since he is in G land, guess I won't have to worry about him showing up, now will I? Not that I was anyway.

I HAD no argument with him, we were both talking about the crap posts, then he turns on me. Read the thread. NONE of this needed to be happening.

Source record: 21722

I have a very good condition Tektronix 517 scope -- orange trace on blue background - very neat!
I have to dispose of it, but before sending it to the dump, I thought that just maybe someone out
there might want one. So, it is free to anyone who can pick it up in Vermillion, SD, which is
35mi north of Sioux City, IA, 120 mi. north of Omaha, and 65 miles south of Sioux Falls, SD on
I-29, with a 7 mi drive into town.

I fired it up about five years ago and was beautiful trace!

Yeah, I had one of those, too. After I built it, Itook it apart, made a
'printed' circuit board with a piece o' copperclad and a Mototool.
Worked just as good that way!

I love things that glow...

Hi,

I have two TEK 561A scopes for sale. They are clean and have a good trace.
I'm asking $50 each plus shipping.

I can provide pictures on request.

I have the broadcast band ARC-5 transmitter in my collection
The band is not quite broadcast band though, it is 0.8 to 1.3 MC.

Once had a complete set up given to me - cables and all. Back then, you couldn't give em away - at least not around here. I tried! Computers hadn't quite caught on yet so far as News groups and E-Bay. I had no use for it and I don't collect "antiques", so I scrapped it. I sold the coils and various other parts out of them for a decent price just as "surplus" parts. Needless to say, I didn't get rich from selling the parts, but I managed to fetch a few bucks. Not a bad deal. Had a book also that I came across after the fact for converting them to Ham. Kept it for a while, thinking I'd get some more gear at some point and modify it. No more gear was found, so I ended up selling that book. No more Arc 5 for me. The only thing I have now which comes close to it, is an old mic - looks to be from an old Aircraft Radio. Not sure. I'm not sure if I'll keep it yet, or not. At least it isn't in the way. I'm trying to think what the band was on this particular set. I think it was 1.8 or 2.5 to something. Can't recall.

I had a BCB ARC-5 rcvr back in the early 80s. They were a tad pricier
even back then than the more common SW units. I paid $15 when SW ones
were running about $5-10 <G>

Sold it to a guy out West that was accumulating a bunch of them for some
sort of BCB propagation study. Darn good little receivers for BCB DXing.

I looked in an old 1950s CQ mag and the BCB ARC 5 sets were even then bringing 4x what the SW sets were selling for, eg $40 instead of $10. Guess they always were comparatively scarce.

>I have the broadcast band ARC-5 transmitter in my collection
>The band is not quite broadcast band though, it is 0.8 to 1.3 MC.

It took three of them to cover the BC band

IIRC:

The T-17 covered 1.3 to 2.1 Mc.
The T-16 covered 0.8 to 1.3 Mc.
The T-15 covered 0.5 to 0.8 Mc.

My info says they were only made by ARC and only made for the Navy.

Look up the completed price for a recently-sold BC-442 on the bay. Over $440 - but it's new-in-the-box.

What we're really seeing, up-close, is the transition of something familiar from the category of "practical/functional device" to the category of "antique/collectible item". It's not limited to ARC-5s - lots of old radios are going through the same transition.

Some years back, a mint SX-88 went for over $6000. Part of the driving force was that it was mint, and part that it was one of the first really nice SX-88s to appear on the bay. And the '88 was not made in quantity, and cost about $700 new in 1954.

Few weeks later, another '88 appeared. Almost as nice - but it went for a lot less (less than $3000).

But the best one:

Some time after the '88, an unbuilt Heathkit AT-1 appeared. It was one of the last AT-1s made - 1956 date code. Still in the original sealed box with original label.

Now the AT-1 wasn't rare, and it only cost $29.95 new. Of course an unbuilt one *is* rare, but if you built it, the value would tumble.

Kit went for $5100. Not a typo - five thousand one hundred US dollars.

I learned computers thanks to Robin. The store manager at the local RS at the mall. She let me come in every day after school and do whatever I wanted on a model 3 or model 4 computer. I probably sold more computers for her than the people she had working there. No wonder she gave me free 5 1/4's all the time!

I revisited the model 4 a few years back. Someone tossed one at a hamfest and I took it home. Most of the software was locked into the 198X years. They knew from the beginning that you had to sell new software all the time. Unfortunately it died some weeks later.

Joe, You live in the metro area of the largest most developed city on
the planet. Take a sample down to the jazziest auto paint store within
radius and they can match it and even put it in a spray bomb for you for
$15 or less.
No brainer.

I know some list members follow boatanchors on the silver screen so here is a new one... in "Sky Captain and the World of Tomorrow" there is a great close up of a Halli S 20R but the speaker has been replaced with an oscilloscope CRT. Whether the modification was physically done or added in by computer special efx, I couldn't tell. 73 Mike KF6KXG

$15 or less, I wish
I tried that, seem paint shops here (North Shore Long Island) have become
spoiled rotten and money crazy.
Seems they dont even want to look at me unless Im collision business
customer with a pocket full of insurance money.

1 Quart minimum $40-$44 plus $30 to put it into 2-16 oz cans.
It also not available in Enamel (what they told me).
Lacquer chips to easy, I dont want that
What a pain in the neck, Im going to have to drive to the Bronx and find guy
who blended my Collins gray for the R-390.
It was actually in his old book with "Clapton Green" guitar lacquer

I am interested in picking up one of the FT-101 transceivers, but there are so many variants (i.e., FT-101xx where xx can be all kinds of different letters). Any suggestions where I might look for a comprehensive listing of what each of those designators means?

Thanks in advance.

A Greyhound to a hick town (like Columbia) in South Carolina might be
cheaper still :-) In that real world they may not even charge ya! I
can get a quart of nice computer matched enamel paint here in little
Vieques cheaper than they sell the Gringo name brand shelf stuff,
usually $20 or less. Go figure. Of course they can't do the aerosols here.

Thanks for the reminder of why I don't choose to live in NYC even though
its ALL available there. If I want a bagel at 3 AM here I'm surely SOL
but wouldn't pay 5 bucks even if such was available.

From what I remember
101 had nasty drift problems, HV on the PCB often burned up
101B same set improved
101E speech processor added downgraded to crummy plastic switches
101EE less speech processor
101EX less speech processor, less inverter for 12volt mobile TX operation.

Id say find a nice old B

I owned a 101B for twenty years and it was a stable, reliable workhorse. A very dependable, no-frills radio that always worked when I turned on the power switch. Sold it off about 10 years ago.

I think most 101 experts may tell you the 101E was the best. It has the RF speech processor as standard equipment. The proc works extremely well.

One thing to remember: since all of these 101's are now 20+ years old, it's a real roll of the dice if you get a "good" one or one that is plagued with a few problems.

Just as to provide some other ideas that you might not have thought
of, Lowes, Home Depot, Sherwin-Williams, Duron, True-Value Hardware,
Ace Hardware... Will all computer match a paint chip for you in a
variety of different kinds of enamel. YOu can spray most anything
with a cheap paint sprayer.

Hello from Spain!

101Z and 101ZD models are lots different than 'plain' 101s. In fact,
they are closer to a 901 than to a 101 (I had a 101 and now have a 101ZD
and 901DM and have worken in all three :-))

Best 101 is later series ZD, IMHO (and they use true RF finals!), but
they are perhaps not 'true' 101s

Check this very good page for lots of 101 series info:

http://foxtango.org/foxtango005.htm

Regards,

JOSE

With respect, I disagree.

Anonymity can benefit a debate more than it detracts: it relieves a poster of the externalities that blunt honesty and originality so badly wanting in many discussions on Usenet, and being recognized seduces some to sink to mean-spirited sarcasm when they're afraid to make a controversial point or defend an unpopular opinion.

With the entire world able to read my words, and with a mind to the ever-increasing power of corporations to dictate their employees' actions outside the workplace, I choose to be "anonymous" for purposes of Usenet posting.

That doesn't mean I'm not responsible for what I write: my ISP and any policeman can find my "true" identity quickly and easily. That doesn't mean I don't stand behind my words: I defend my opinions with the same vigor I apply to arguments using my "real" name.

What it means is that the reader must consider what I write without knowing who I 'really' am: in other words, (s)he must evaluate my postings and decide if they are worthwhile solely on the merit of what I write, without reference to the boatload of baggage I bring to any contest where my pedigree is advertised in advance.

That's not a bad thing. It means that the debate is focused on the issue at hand, and much less likely to be sidetracked or sabotaged by persons it makes uncomfortable. Especially in this political season, we've all seen what happens when some "heavyweight" arrogates acceptance of an opionion or 'fact' that doesn't deserve consideration or which begs for disproval, often with a hidden agenda having little or nothing to do with the argument's basis.

Moreover, the reputation I build on Usenet, even using a different name than the one inscribed on my mailbox, is still a reputation, and still carries with it the accumulated weight of my past writings. Eric Blair, David Cornwell, and Samual Langhorne Clemens all made indelible impressions on the litterary world using assumed names: in these and many other cases, their 'real' identities became a minor footnote to their

accomplishments under their 'false' names. I do not, sad to say, expect to be in their company anytime soon, but one can always dream, and my dream is that I can assend over the limitations often associated with persons of my upbringing and education, to make a meaningful difference in others' lives, if only via encouraging them to think for themselves.

FWIW. YMMV.

William

I have 5 4-1000A type xmitting tubes for sale. Two are Eimac 4PR1000A. One is a Amperex 4-1000A. And the last two are "JAN" 4-1000A's. All have been tested and make very good output. Glass is nice and clear (can email pic). Price for the "PR" tubes is $175.00 each. And $150.00 each for the regular 4-1000A's. All prices are PLUS boxing and shipping from 96002. I ship in 5 gal. paint buckets. This is a great way to ship these big ol glass tubes.

I also have a SK-510 socket w/chimney clips,a SK-506 chimney and plate cap for the 4-1000's. Price is $100.00 for all three items.

Please reply to me at kf6ikc@sbcglobal.net and not the list as I do not check it very often.

Take care,Stan

So fix it. 90% of the problems on those things have to do with bad capacitors
and connectors, and they are very easy to work on. Not a lot of actual
interconnects either. Shotgunning electrolytics may well fix it right up.

The Sherwin-Williams dealer was able to match it up and mix some enamel no problem $16 for a quart. Smart guy ! He also stated since I wish to "bake the finish" he mixed a semi-flat that will look like semi-gloss when it comes out the oven.

The woman at Home Depot didn't know how to work the matching machine, handed me a book.

Yea saw that - that was when they were trying to DF the signal controlling the flying robots attacking the base.

The use of the S-20R makes perfect sense as it's "art deco" look fits into the style of the movie. Most of the movie looks like it came out of a 1930's Pop Mechanics or Amazing Stories cover.

Also like the radio towers with the top "static ball" radiating radio waves. Classic! Guess the tower was just to support that little radiating ball. HI HI

Radio played a big role in this movie but note "Television" or "picture by radio" was never mentioned, which in the real "30's" was mentioned all the time by Hugo.

Wish Hugo was alive today to see how boring the future actually turned out to be. :^(

It had "Super Skyrider" on it. The oscilloscope trace was green and
not that clean. It looked really "correct".

I recall seeing a dual trace display too.

Also, there was the CW sequence near the end using a fold-out key.
It was too brief for me to tell what was happening but it looked
"real".

From what I understand there are no props or sets.
The entire movie was shot with the actors in front of
a green screen and everything else is digital.

Greetings,
I am looking for pictures of the PRC-25 in use, on a table, anywhere.
I particularly need photos of it with the webbing. This will be used
by an artist who is doing a painting of soldiers in vietnam and is
incluiding a lot of radio pics in it. Looking for detailed pictures of
the PRC-25, PRC-47, PRC-41, PRC-90, PRC-10, PRR-9, PRT-4, and other
ground, helicopter, and FAC radios.

According to what I read, everything was digital *except* objects which the actors handled or manipulated...which would probably make that key 'real.' Also, some of the 'set' pieces I saw in magazine and web coverage was 'real.' I used quotes there because the only parts which were real, were the actual pieces the actors stood on or touched. Even those were later textured and colored to appear real. For instance, in the scene where the reporter character is clumsily climbing down off the airplane wing (the carrier scene where she first meets the Angelina Jolie character), there was about three feet of the wing that was a physical set...only it was smooth and painted a flat grey. The rest was added in later.

Now all they've got to do is get the digital
images of the chartecters a little better
and they can save a bunch of money not
having to pay high price actors.

Anyone remember the movie from the 70's
called "Looker", this is part of what it
was about.

The local Radio Shack "Computer Center" dedicated store back in the mid 80s was nothing like this. The staff was snotty and arrogant. They didn't assist with making a purchase... you either bought quickly and expensively or out you went. Since they were the only game in town and had most TRS-80 items in stock unlike the regular stores, you just had to live with it.

Jack,

I have had a HX-1681/HR-1680 combination for over 20 years now and absolutely love it. Sorry that it is not for sale but, I want to make sure that you know that the HX-1681 requires an external power supply, the PS-23. If you don't have that, the transmitter won't do you any good. And make sure you get the power supply interconnect cable. Those old plugs are getting harder to get.

I hope you find one and get to use it. In combination with the HR-1680 you get full breakin operation. And, the reliability is great. I've only had to fix mine two or three times and even then the problems were small.

Source record: 21693

According to my research, the total number of 520-1500 kc units produced was around 30,000. Compare that to 450,000 beacon receivers; 190-550 kc, the ones that amateurs used as the Q-5'er described in QST December 1947. Sets that covered 3-6 mc and 6-9.1 mc had around 200,000 produced each, those covering 1.5-3 mc had a production run of about 50,000.

Rarer still are the units covering 9-13.5 mc - 46 sets, 13.5-20 mc and 20-27 mc only 150 sets built.

I would have paid up to $200 for a 520-1500 kc unit in top conditon.

I cleaned out my collection of Command Sets about 10 years ago---I had nearly every component of that communication/navigation equipments. Nearly everything was gotten rid of but I kept a couple receivers and transmitters and a couple of unused XM-108'S (MY CHALLENGE TO THE COMMAND SET COLLECTOR; WHO KNOWS WHAT AN XM-108 IS?). I couldn't see myself selling it to hams who would probably strip them down for the tuning capacitors so I donated it all to a warbird restoration outfit where they have been outfitted in such aircraft as the B-25.

The collection was part of a research project started 20 years ago to be followed by an article on the history of the Command Set.

Howdy,

I got into a discussion about Skycraft Parts and Surplus in Orlando regarding it's early history the other day.

Anyone have facts regarding the original owner and location before 1970 (before they moved to Tallokas). Skycraft was sold to the present owners in early 1970's when the shop was moved to Tallokas Ave. (before they moved to Fairbanks where they are now).

Tom

5037. FS R4B w/MS4 & T4XC

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-10-10 13:47:46 UTC
From: wrhood@exis.net
Message-ID: <41693c68.2690402@news.exis.net>
Source record: 21595

I recently acquired a Drake R4B with MS-4 and a Drake T4XC
from a radio club's holdings that had not been used or checked out for
3-4 years. The R4B is S/N 13XXX and the T4XC S/N 20XXX. The R4B has
12.6 MHz, 13.1 MHz and 13.5 MHz extra crystals for the 160 meter band;
plus 39.1 MHz, 40.1 MHz and 40.6 MHz crystals for the 10 meter band.
The T4XC has the 12.9 MHz crystal for the 160 meter band. Both units
are in the Drake condition "Very Good Condition", the R4B does
receive on all bands and extra crystals but the 2.0-2.5 doesn't work.
I do not have an AC-4 to check out the T4XC, so I can not check it
out.
I would like to get my money back and payment for the packing
and shipping from 23320 to the buyer. I'll ship radios and manuals for
$300 plus packing, freight and insurance upon receipt of cashier's
check or after personal check clears (10-12 days).
I can be reached by telephone (757) 487-0357 [leave message if
no answer] or by e-mail <wrhood@exis.net>. K4WYS

Source record: 21596

For sale: Portable Tektronix Spectrum Analyzer Model 1401. This unit
has internal battery pack. Can be powered from +6Vdc to +16Vdc
external power input and also works from 115V AC.
Frequency range 1MHz to 500MHz continuously variable.
Resolution bandwidth 3KHz, 100KHz, 1MHz. Very nice instrument!
This Spectrum Analyzer was designed to work with a Sony/Tek Type 323
Oscilloscope.
I guess it will work with any other scope as well.
I used it with Tek 2215 scope without connecting ext. trigger and
sweep signals.
The Spectrum Analyzer is in good working and good cosmetic condition.
It comes with AC line cable. No manual.
$250.00 plus shipping from SF Bay Area.
Pics available on request.
Please reply directly to: kb9olm@yahoo.com
Thanks,
vlad, kb9olm

Updated figures: We now believe only 50 each of the four models
of RAT and RAT-1 were produced, making 100 RAT and 100 RAT-1.
A far as is known, less than ten of each model have survived.
Better than the RAVs, of which only two or perhaps three
are known to be in private hands.

> (MY CHALLENGE TO THE COMMAND SET COLLECTOR;

David:

Congratulations... you are the first person I have met that knows the correct answer to the question.

The XM-108 was the transformer that Fair Radio Sales used in a power supply/speaker kit for the Command Sets. Sometime in the 80's Fair seemed to have dropped them from their catalog.

BTW... I have a Command Set transmitter that is still in the sealed, unopened factory carton. I like to make the claim that its the only one left in the world in that condition, but then, it wouldn't surprise me if some fellow pipes up that he has a warehouse full of them in the same condition.

Here are a some items for sale. Prices do not include shipping. I will ship overseas.

Ten Tec Argosy 525 CW-SSB QRP Transceive.....$275 plus shipping
This is a switchable 5 watt or 50 watts, no tune-up transceiver that will work SSB and CW on 80, 40, 30, 20, 15 and 10 meters. This radio runs off of 13.8 volts DC. This radio will also run QSK. This unit is in nice shape and works well. It does have some scratches. This radio has the optional noise blanker and a power cord. I measured 50 watts and 5 watts on my Bird wattmeter. Includes a copy of the manual on a CD.

http://members.cox.net/radiostuff9/argosy102.jpg
http://members.cox.net/radiostuff9/argosy103.jpg
http://members.cox.net/radiostuff9/argosy104.jp

Hewlett Packard HP 651B Audio Test Oscillator .....$100 plus shipping
This is a highly stable capacitance tuned oscillator that will go from 10 Hz to 10 MHz so it can be used as an both an audio oscillator or low frequency RF signal generator if you don't need to go above 10 MHz. It has a sine wave output adjustable from 10 microvolts to 3.16 volts into 50 or 600 ohms with two separate outputs through the front panel connectors. This is a working unit. Does not include a manual or power cord.
http://members.cox.net/radiostuff9/hp651b.jpg
http://members.cox.net/radiostuff9/hp651b2.jpg

Military VTVM ME-260/U with RF Probe.....$65 plus shipping
Nice well built working military unit with RF probe. This appears to be the same probe as used with the HP410 series of meters. Missing back cover.
http://members.cox.net/radiostuff9/mil_vtvm3.jpg
http://members.cox.net/radiostuff9/mil_vtvm4.jpg
http://members.cox.net/radiostuff9/mil_vtvm2.jpg

Digital Precision 2440 Nixie Tube DVM.....$35 plus shipping

This unit will measure DC and AC voltage, and Resistance. This unit has been tested and works. It does not include a power cord.
http://members.cox.net/radiostuff9/dp2440.jpg
http://members.cox.net/radiostuff9/dp24402.jpg

Batch of W.W.II Crystals.....$40 plus shipping
39 Crystals. See photo for frequencies. Here is a link to the frequency conversion chart http://members.cox.net/n7rk/ft241_xtal_list.jpg

http://members.cox.net/radiostuff9/xtal_batch.jpg
http://members.cox.net/radiostuff9/xtal_batch2.jpg

Vintage Westinghouse Portable DC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition. The instruction card on the inside cover has a date of 1942.
http://members.cox.net/radiostuff9/west_meter2.jpg
http://members.cox.net/radiostuff9/west_meter.jpg

Set Of 10 Knobs (Some Matched).....$15 plus shipping
http://members.cox.net/radiodx3/knob_set.jpg

Set Of Six Knobs.....$10 plus shipping
http://members.cox.net/radiodx3/knob_set2.jpg

Unknown Microphone #1.....$25 plus shipping
Neat Brushed aluminum housing. Manufacturer is unknown. Needs a new cartridge which you can probably get from Radio Shack to work.
http://members.cox.net/radiostuff9/weirdmike.jpg

Unknown Microphone #2.....$20 plus shipping
Manufacturer is unknown. This does work and was hooked to a Ranger I when I got it.
http://members.cox.net/radiostuff9/odd_mike3.jpg

Philips 4-65A tube with Ceramic Socket.....$35
Build something! I did check the filament for continuity and it is OK. No other way to test. The beige sheet in the background makes the tube appear burned which it is not!
http://members.cox.net/radiodx3/amp_465a.jpg
http://members.cox.net/radiodx3/amp_465asocket.jpg

Eimac 3C24 Power Triode Transmitting Tubes.....$10 each plus shipping
I have two of these that are NOS tubes which are new in the box. I did check the filaments for continuity
http://members.cox.net/radiostuff9/eimac3c243.jpg
http://members.cox.net/radiostuff9/eimac3c24.jpg

Thanks for looking.

If the problem is using a DejaView browser plug-in to read the files,
I recommend the stand-alone version of the DejaVu program:
http://www.tuberadio.it/utils

Look for DVS31.exe

Then, just download the dju files from BAMA or wherever,
and then open them with DeJaVu Solo 3.1

This coming Sunday.... The season's last...

+++ Now even more Buyers Parking !!!
Thanks to TKT we have use of their new parking lot
across Albany St from the SWAPFEST !!!

!! ** More Buyers PARKING is available ** for details see
http://web.mit.edu/w1gsl/Public/flyer

*** !!!! In our Traditional GARAGE and the adjacent lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday October 17th 2004
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

Source record: 21623

Sorry this is so far from boatanchors, but who else could answer?
I acquired a Sony VAIO P4 computer from my usual source and it didn't light up at all. Luckily, I found two burned up resistors in the power supply. I substituted a spare power supply and the computer works fine, but the power supply is outboard so I need to fix the original. So here's the problem: the two little resistors R4 and R5 (1/2W) are marked brown, black, silver, gold. The translates to me as .1 ohm. Is that possible?
The two were in parallel (electrically and physically) and it looked as if there was an arc between them that burned them both up. There shouldn't have been any voltage between them, given that they were in electrical parallel, and they shouldn't have overheated, I wouldn't think, with such low resistance.
Since I was raised on 6L6s and 807s, a .1 ohm resistor is a mystery to me. Can anyone tell me if these really are .1 ohm resistors?
If I ask a computer guy (of which there are many) the answer would be: buy a new computer. That's why I'm posting the question here.
Tnx,
John

>The translates to me as .1 ohm. Is that possible?

Yes. They may have been there just to act as fuses, or they may have been
used as shunts for measuring current.

>The two were in parallel (electrically and physically) and it looked as if
>there was an arc between them that burned them both up. There shouldn't have
>been any voltage between them, given that they were in electrical parallel, and
>they shouldn't have overheated, I wouldn't think, with such low resistance.

They may well have overheated if they were in series with a dead short.
Before doing anything else, start checking power transistors.

>Since I was raised on 6L6s and 807s, a .1 ohm resistor is a mystery to me. Can
>anyone tell me if these really are .1 ohm resistors?

If you have a working supply, you can measure the ones in the good one and
find out, but I would not be surprised if they were. Draw out the schematic.
I bet they were being used either as current shunts or fuses and that you
have a switching transistor that is a dead short. When you find it, also
check whatever is driving the transistor base too.

It's just like working with 6L6es, just with lower values on everything.

>If I ask a computer guy (of which there are many) the answer would be: buy a
>new computer. That's why I'm posting the question here.

I'll tell you the opposite. You should buy an older computer. The Vaio is
much too new to be interesting. You need a PDP-8e like I've got.

Do some searching before posting, you're just lazy.

sci.electronics.repair is the newsgroup you want.

The "FAQ" for that newsgroup, almost multiple books about the repair of e
electronic devices, is at http://www.repairfaq.org

At the very least, rec.radio.amateur.equipment might have been at least
slightly more appropriate than a newsgroup which is supposed to be
about old radio equipment.

<snip>

The arc path across two parallel resistors sounds like the result of a
lightning strike.

"The Art of Electronics" by Horowitz and Hill (2nd edn. 1989, Cambridge
Univ. Press) has a good write-up on computer power supplies, and has the
complete schematic for typical one (an old Tandy design).

Source record: 21634

Those resistors are Power MOSFET source resistors. Those resistors are
used to limit total power output.If those are burnt up, It is almost
sure that the Power MOSFET is shorted. Why the MOSFET is shorted?
many reasons, but most likely the PWM IC is shot to death,too.
It is a chain reaction that happened so it is not worth trying to fix.
Give it to some power supply repair guy, I am sure you can find them.
For them, if they do repair day and night, it is a easy repair and
they may have plenty of parts.
If the PWM IC is UC3844 or UC3845, I can send you couple. The MOSFET
may be a Japanese part but it can be substituted with IR or ON Semi
part. The Japanes part is usually starts with 2SK series while the
american part is usually starts with IRFxxx series.
So leave it to Power supply guy.

Does anyone have a link or a digital copy of the schematics for
the 651B? I've checked Bama and the mil-list sites (SG-763) but
couldn't find one. I have a reasonably clean unit, but it squeegs
at certain frequencies and won't adjust to 3volts output.

TIA,

Steve.

I haven't heard anything about Skycraft so I guess they did OK. I was told that they took down their 'flying saucer' for safe keeping.

A sad note... Mr. Skycraft (new owner from the early 70's) passed away sometime during hurricane Frances.

I passed by ERSC weeks ago and noticed some roof work on their warehouse... I hope Stan and his stock of 2 million plus electron tubes made it through the hurricane. They must have gotten the full force of the wind being in the clear as they are.

It's a great place to get your tubes from and Stan is a great guy to deal with; their prices are very resonable. It was quite overwhelming for me to walk up and down the aisles of their warehouse and look at all those tubes---just stunning.

Source record: 21548

I am looking for a power supply (DC-DC Converter) for an AN/URC-35B. The DC-DC Converter was part of the AM-3007A RF amplifier. The unit in my radio has the following information:

DC-DC Converter
14304 Assy 0026-2200
Serial Number A0517
465820-168-9628

I am willing to swap "good junk" or purchase outright. A non-working unit would be considered if it has a good inverter transformer- I can rebuild just about anything else.

I have a complete tech manual and can swap schematics, parts lists or assembly drawings.

One way to spot a fhilshing site is to use an
incorrect password for your account. If it's a
legit site, it should complain. If it's a fake,
it won't know that the password is wrong. *Unless*
the site is trying that password right then and there
at the legit site.... SO better not use this method.

Hi..
I cam across a Sonar VFX-680 exciter.
It appears to have a VFO in the 75 meter band.
A 6L6..maybe 5 watts out?
It's not in bad condition.
Will need a recap etc.
I am looking for info on it and specs.
Anyone use one?
Any info appreciated.
Joe

Hi, Joe

There's an ad for the Sonar VFX 680 in Apr 1947 QST, page 88.
It looks like an interesting find.
Here's the ad copy:

Everything in one complete unit, containing
Narrow Band FM on all bands* - an exclusive Sonar circuit.
CW on all bands - free from all chirps and key clicks.
Two band operation with one set of plug-in coils for top efficiency.
"VFX" rubberizes any cut xtal.
VFO or xtal - just plug in the xtal and you are set - no switching.
CW monitor ideally suited for the bug operator.
Phone monitor - no auxillary equipment required.
RF output power 4 to 6 watts on all bands except 6 meters.

* NBFM at present permitted on 11 meters and above 29 Megs.

73,
Ed Knobloch

E-Bay does send out e-mails..... BUT they won't ask for your info MOST of the time, unless there is truly a problem. The one SURE FIRE METHOD to know if you're talking to E-BAY and not some spoof site, is to have gone to www.ebay.com and entered it into your favorites and enter the site from there to do any business, NOT from any e-mail.

IF you are suspicious about any e-mail stating it is from E-Bay, then you can send it to spoof@ebay.com and they will check it and let you know if it is legit or not. IF it is not legit, you'll know pretty quick. IF it IS legit, they'll tell you that too, and what to do about it.

I would NEVER EVER enter any info into an e-mail "stating" it is from E-Bay. There are too many shams running out there which mimic E-Bay and "look" legitimate. What I did find though once when I went to reply to the ass holes who sent a similar message as I knew it was fake, was a name came up on the screen. They had a Yahoo address. I forwarded the message to E-Bay at the spoof address as mentioned. I do with all others as well.

The operative word here is ASSUME. NEVER ASSUME the messages you may get "are" from E-Bay. In this day and age, you have to be very on the ball with where you plug in your information. One of the biggest lines the scammers use, is your account will be deleted or some such wording unless you do this or that - asking for information. THAT IS A MAJOR TIP OFF.

Hi Ed..
I downloaded the manual from BAMA.
Interesting.
It says you can use an AM receiver to adjust the deviation control to make the signal no wider than an AM signal until the audio is perfect. (quote form manual)
Can be used on AM?
Hooked up to a Central Electronics low drive amplifer might make a respectable transmitter.
MmMmMmMmmmm...;)

Hi, Josh

No, the Sonar 680 puts out NBFM phone only
(actually, the rig is phase modulated not frequency modulated).
The 6AGC buffer operates in Class C, wiping out any resisdual a.m.
(much like a limiter stage in an FM receiver).

The manual talks of using a +narrow+ receiver, actually tuned
to one sideband, and adjusting the transmitter audio gain "deviation"
control so the signal sounds good on that band.
This is the definition of "narrow" FM, where almost all
the sideband energy is in the first set of sidebands.
For example, if your transmit audio is limited to 3 kc,
and your total FM transmitter's bandwidth is 6 kc, you are
transmitting NBFM. If you increase the deviation further,
additional sideband energy appears further away from the carrier,
and you are now transmitting FM, not NBFM.

An NBFM signal could still sound good to a listener
using a narrow a.m. receiver, like a 75A4 with 3.1 kc filter,
set up to receive a carrier and one sideband.
However, someone listening with a wider
a.m. receiver set up for double-sideband with carrier reception
would hear a muffled signal, unless he realized you were transmitting
NBFM. If so, he could shift his receiver tuning to one side
or the other for "slope detection" of your transmitter audio.

73,
Ed Knobloch

It can be used on AM if you've got an external modulator.

It dates from a brief period when quite narrow FM was touted as a new
and advantageous mode for HF. No big modulator needed, and if it's narrow
deviation, doesn't fill up the band. Use "slope detection" to receive
it on an AM receiver; you mistuned the receiver a tad so the signal is
on the slope of the receiver's IF selectivity. Thus as the signal is
modulated, the frequency variation causes the signal in the receiver to
vary in amplitude as it moves along the IF slope. This can then be
demodulated in the AM detector.

Whether or not narrow deviation FM was a good replacement for regular
AM, SSB came along at about the same time and won out.

FOR SALE: Bendix RA-1 receiver. Covers 150 Kc to 15 Mc in 6 bands.
Very good working condition. I'm not very familiar with this model,
so not sure if the AC power supply mounted on the back of the cabinet
is original or not. If not, it's a nice looking job by someone.

See picture at: http://home.comcast.net/~lostmessages/receiver.htm

I've never seen one before this one, so have no idea on value.. Make
offer.

National was pushing NBFM in that era, and the HRO-60 had a chassis socket for
a plug-in NBFM detector, and the front panel mode switch had a labeled position
for it.

Not suprisingly, the HRO-60 that I had for a hwile, the previous owner had
homebrewed an SSB product detector module into that socket! And even
Dymo-labeled the knob skirt over the "NBFM" with "SSB" just so he wouldn't
forget!

The Drake R8 family includes NBFM detection. I actually heard some on 10m not
too long ago. NBFM is simple to generate and lets you use Class C finals, as
others have ppointed out. But the S/N ration of FM goes up with increased BW,
so narrow BW must not perofrm well. And it's less handy than SSB for "netting"
a group of hams who try to all talk at once.

The Elmac AF-67 has NBFM. Central Electronics uses NBPM, which has a similar effect. The HT-19 is a 100 watt Hallicrafters rig that uses only NBFM for modulation. One of the reasons for using it was to avoid TVI, which came on suddenly with the advent of tv.

I connected my AF-67 up one night and tried to check in to a local SSB roundtable using NBFM. No one could understand me. AM receivers will slope detect, but product detectors are not tolerant of fm.

I purchased a Sonar VFX-680 at a local radio store in the late 50's for $9.00. It was unique but more a novelty than anything else. It was sure no Collins in terms of stability or dial readout.

I have both the Sam's and Hallicrafters service information for my S-40A, and the dial cord diagram on each was wrong for my radio. I had to cross the dial cord at the bandspread cap to get the tuning knob, the bandspread dial and tuning knob to get into agreement. I say it was incorrect for my radio, because it looked like the diagram would have been correct if the bandspread dial were calibrated in the opposite direction. Anyway, I can be more specific if the original poster runs into the same problem.

About a week ago there was a UK vendor selling 4 or 5 KWM380s in separate auctions. Somehow, the bidding got up to over $30,000 each. On one, it might be a typo but the $30,000 price was across the board. Unfortunately I didn't bookmark the auction.

I picked up a Dow-Key DKC-TRM-1 tube-type T/R switch. All of them that I've seen before use a 6EH5 tube. This one has a 6CB6 installed. I have no idea if it works or not. My question: Does my unit have the wrong tube installed, or did Dow-Key use more than one type of tube in this model?

Maybe the existance of incorrect Halli manuals explains why an SX-25 that I once had, worekd fine but the BS dial worked backwards! Someone followed the manual too closely :-)

I have another SX-25 now whose dial reads correctly, so it wasn't just a quirk of that radio -- I think we'd all know aobut it if it was! --Mike K.

It's fairly easy. Give it a go. Strip panel, Repaint, Let dry completely,
Fill in lettering (I use tile guard white grout coating. It cleans up with
water and leaves nice white lettering. It has a sponge tip that makes it
easy to do the lettering also.) Buff off excess with a damp rag. Let dry
completely. Then clear coat panel with clear laquer. Done!

Theres other ways to do it too and I'm sure others around here can fill you
in.

==========

I had to cross the cords in my S-40A too. The instructions in the
manual were wrong for my radio. In my S-40A, the bandspread capacitor
plates turn clockwise to increase capacity, in my S-40B the plates
turn counterclockwise for increasing capacity. So the S-40A and S-40B
are reversed! I don't have a S-40 so I don't know where it fits in.
Just string the cord so the bandspread capacitor increases capacity as
the dial moves from 0 towards 100.

Best Regards,

Ed

Dean -

The standard tube for the "stock" Dow-Key DKC-TRM-1 switch is indeed a 6EH5
http://www.n4mw.com/gdowkey.htm

The 6CB6 may have been a substitute by a former user/owner.
I have also seen a 6AK5 in some used units.

IF you plan to use or test this unit, it requires external power ~ 120VDC
(usually provided by a tube transmitter through external accessories socket)
and 6 VAC (tube filament). It should be connected as close to the
transmitter as possible.

I agree with this and maybe it was Frank who helped me out with mine.
All of the available data seemed to be incorrect and crossing the BS
cord was required on my set.

If the BS dial just reads 0--100, you can string it either way.
On my SX-11 (a real antique!), the dial reads 100 at *minimum* capacitance, the top of the band. My Super-Pro 400 seems to be the same way.

True, the antique 3-dial BC sets used 100 for fully meshed capacitors, and 0 for wide open. So, whatever floats your boat (anchor).

Since the SX-25 has calibrated bandspread bands, I know that one was backwards!

Nope, we'll tell you the smart thing to do: buy a new power supply. If you can't find an ATX supply for $20, then you probably shouldn't be playing with electricity anyway. Why not just tell your buddy who sold it to you that it was DOA and he owes you a new PS?

My wife's computer with a 200 watt ATX power supply went south. Cost to replace the ps was over $60 just for the unit. Reason was that it fitted into a small case. I got a new ATX case with a 350 watt power supply for $50. Had to remove all the stuff from the old computer case and put them into the new case but she now has more power capacity with better cooling.

My PSU story goes like this...Mine got zapped during a storm (yes, right
thru an APC UPS). I found a bad diode and a resistor that had cooked
over the years. Didn't fix.
Went to the local computer dealer and paid $29 for a new "500 watt"
unit. The damn thing was so light compared to the older 200 watter
you'd almost swear it was an empty box!
Now you can't listen to a radio anywhere in the house cuz this piece of
cheap chinese crap radiates so much rf hash. I'd rather fix the old one
but getting the machine back running was the goal at the time.
Oh, and the mounting screws didn't match up either.
Buyer beware.

Hello to all.
When I was a kid I recall reading something in an old CQ/73/QST magazine about a modulation method for AM called Tayor Modulation. It was sort of a precursor to controlled carrier and used a seperate modulator tube hooked up sort of in parallel to the final amp and usually was the same tube type. There was no modulation transformer like in typical class B High level modulation schemes.
Does anyone know/recall where I can get printed information about this method and its application or why it was not more activly used?

Thnx in advance... Mike Baker K7DD

Hi, Mike

You are thinking of "Rothman Modulation" April 1952 CQ.
(Which I can't find). If I recall correctly, controlled
carrier screen voltage for the finals was derived from the rf output
carrier power. I remember a picture of an outboard box with a couple
of 6Y6 style tubes (perhaps it was a single 6Y6 and a rectifier tube),
modulating a pair of 813's.

73,
Ed Knobloch

Hello Ed:

My wife says I have so much crap I could not possibly find anything - but I walked right to the shelf where the April 1952 CQ magazine was.

You are therefore batting 1 for 3, since you got it right on the outboard chassis, but wrong on the 6Y6 style tube. However, when you get to be our age and have forgotten more circuits than the younger hams have ever read about, that is not that bad.

Anyway, there were two different circuits shown. A 100 watt mobile modulator using a 6X4 rf rectifier with a 6SN7 modulator tube, and a fixed station modulator for up to 1000 watts uisng an 80 rf rectifier, a 6SL7 speech amp and a 6CD6 modulator tube. Since the 6CD6 tube has a plate cap, it does not look like a 6Y6. The 6BQ6 and 6BG6 can also be used.

I have a number of 6CD6 and 6BG6 tubes and never could figure out what to do with them. This is the answer. Build dozens of Rothman modulators.

I think later that year and into 1953, you could buy an "efficiency Modulator" using this system. They claimed 70% efficiency, which was much better than the 52% efficiency of high level plate modulation.

And my wife thinks I cannot find things. Ha.

I have used the same method utilizing artists oil paint (white or black). It is particularly good for deeply engraved lettering. It dries very hard and looks great. The trick is to let it dry for about three days prior to attempting to clean up the smearing around the lettering. It will come off easily with light strokes from a cloth dampened with paint thinner and not affect the paint in the groves of the engraving. I just smear a little on with my finger while rubbing it deeply into the groves. Looks great and will not wear with years of use. I have used this method in the restoration many engraved radio panels and HRO main tuning dial divisions.

You can also use colored "lacquer sticks" as described in my SX-28
restoration article at http://antiqueradio.org/halli12.htm .

As others mentioned, it's not tricky to fill engraved markings with color.

Have fun!

Date: 2004-10-23 02:12:10 UTC
From: "Michael St. Angelo" <mstangelo@comcast.net>
Message-ID: <XK-dnVlYtIlsIOTcRVn-hQ@comcast.com>
Source record: 21520
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.swap

I have a Mackay 3031A for sale. Tunes 0.015-30 Mhz with AM, CW USB and RTTY modes.
Since it was for the maritime use, it did not have LSB mode, but LSB may be tuned with thw CW variable mode.
Bandwidths are 0.4 1.0 2.0 and 8.0 khz. Tuneable in 10hz steps with LED display. Technical manual included.

Price is $750 plus shipping form zip 07737. Pictures on request.

Thanks,

Mike St. Angelo N2MS

5161. Stainless Steel Junction Boxes for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-10-23 14:16:14 UTC
From: Karl Heimbach <kheimbach@ev1.net>
Message-ID: <10nkpsnrkcrde67@corp.supernews.com>
Source record: 21522

I have a few stainless steel junction boxes for sale. They are not new, but are surplus and in excellent condition. They are fine for building relay boxes, loading networks, splice boxes, housing remote signal amplifiers, etc.

They are NEMA 4X enclosures and manufactured by Hoffman. Most have a 7/8ï¿½ knockout in the top or bottom and a 1-1/8ï¿½knockout one side. The door is hinged and gasketed. They measure 6ï¿½ wide by 8ï¿½ tall by 4ï¿½ deep and weigh about 7 pounds. There is a 5ï¿½ mounting flange at the top and bottom of the enclosure. Most have a back-plate and a Myers hub and bushing for the 1-1/8ï¿½ knockout.

They are $20 each plus shipping. Once packed, total weight is about 10 pounds. Insurance is extra if so desired.

Money order, cashiers check, or PayPal (if funded by bank account and not credit card) are okay.

Pictures at "http://users2.ev1.net/~kheimbach/W5QJindex.htm"

Thank you,

Karl - W5QJ

>The bandspread dial also reads "set to zero for normal tuning" twice. There >are also some arrows indicating which way zero is.

OK. So that tells you which way is the right way, for that radio. Hallicrafters seemed to change their minds a few times. I just checked, and the SX-42 is indeed 0 at the top of each band, but the SX-25 is 100 at the top. 73, Mike K. AA1UK

5174. HCRA Auction - Nov 5th, Feeding Hills, MA

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-10-24 15:14:15 UTC
From: Jim - KK1W <kk1w@arrl.org>
Message-ID: <10nnhmgr7gj8s94@corp.supernews.com>
Source record: 21534

The HCRA annual auction is back! Mark your calendars and get your stuff ready to sell (or buy). Here's the info:

HCRA Auction
November 5th, 2004
Feeding Hills Congregational Church
21 North Westfield St.
Feeding Hills, MA 01030 (just behind Dunkin Donuts)

This is well attended event, we usually get over one hundred buyes/sellers every year.
The club charges a 10% commission on the sale (up to $100). This way you're not penalized for expensive items.

Admission is free!

The rules are simple:

1. Amateur radio or computer related equipment only.
2. Mark your stuff with your name, call (if you have one) and a minimum bid.
3. Please combine lots of little junk into larger lots (or the auctioneers will do it for you).
4. If it doesn't sell - you take it home. (HCRA is not a disposal center)

HCRA is offering a great raffle prize this year. For a $1 raffle ticket you could go home with an Icom IC-703 HF QRP Radio! Since admission is free you should have a few bucks in your pocket for raffle tickets!

Also this year will be a memorial collection for WB1Z, one of our past auctioneers. Jim became a silent key this year after a battle with cancer. The memorial collection will be matched by the club and donated in his name to the ARRL Foundation. Please be as generous as you can for this worthwhile cause.

Additional information and a map with driving directions can be found on our web site at: http://www.hcra.org or by calling Jim, KK1W at 413-245-3228.

Thanks for reading and I hope to see you at the auction on November 5th.

Jim, KK1W

Reply to the sender then, see what "they" tell you! That could be an interesting experience. No one has ever said what happens when that was done, with the exception of those who were less fortunate enough to actually send their info to be processed. But then we don't hear them say they gave the info, they cry the blues, they got screwed. Write the "sender" of those messages and report back. Maybe the system isn't perfect, but then if one is dumb enough or let's be polite and say not educated enough in the ways of the internet to know when they're being screwed or not, then even the catch all response won't really matter either. BUT it will at least say - it wasn't from E-Bay - which can then "hopefully" equate in that person's mind as "be careful". It doesn't take much to catch those unsuspecting - off guard. If a person is not up on the things that can happen on here, "nothing" will save that person from being screwed - I don't care how bright they "think" they are or how dumb they actually may be. With some people, unfortunately, "nothing" clicks. You can sit here and preach to them all day on what not to do, and damned if they don't do the opposite. Like a child, you tell them not to touch the hot stove, they do it anyway, to see what happens. People often have to learn the hard way. Instructions - simple or complex - just don't always work with "ALL" people. No, the system is "not" perfect. But until it is, we can only guide them to work "with" it in it's present form - dumb as that may be. I am not aware of anyone sending a blank email to spoof at e-bay, so I can't say what the reply would be. I think I'll try it just for the hell of it. Have "you" tried it to back up your statement? Just curious!

TRM.

There were Knight brand consumer radios going back into the mid-30s and
maybe earlier. It is my understanding that this was the same Allied
company. I don't know of any affiliation with James Knight.

THIS is what you get when you send a "BLANK" page to E-Bay as stated by BM -
above. Try it yourself. You'll see. So much for that theory.
****

ALERT: Your email has not been received by eBay.

We reserve the spoof@ebay.com email address for handling reports of
Websites that have been set up to impersonate eBay. In order to
investigate these reports in a timely manner and provide help to members
who have been affected by this type of activity, we only accept emails
that are forwarded to this address.

If you received this message after attempting to report an email that
appears to have come from eBay but actually directs you to another site,
you must forward the message to us again by using the forward function
of your email program. Make certain that spoof@ebay.com is in the "to"
field. Do not alter the subject line, add text to your message or
forward the email as an attachment.

To help our members better protect themselves from spoof Web sites, we
have developed a new feature for the eBay Toolbar called "Account
Guard." Account Guard includes an indicator of when you are on an eBay
or PayPal Website, buttons to report fake eBay Websites, and a password
notification feature that warns you when you may be entering your eBay
password into an unverified site. To learn more about the eBay Toolbar
with Account Guard, open a new browser and type
www.ebay.com/ebay_toolbar into the address bar. Note that eBay will
never send you an email that includes a download as an attachment or a
link that goes to a page with a download.

eBay also recommends that you ensure that your Web browser, operating
system, and virus protection software are up to date. Check for updates
at the "Windows Update" link on www.microsoft.com and scan your computer
for viruses often.

If you have any other concerns, please use our Help system by clicking
on "help" at the top of the eBay home page.

IMPORTANT

**Please do not respond to this email, as your reply will not be
received.**

However, they were somewhat close geographically. Allied was based out of the west side of Chicago (100 North Western Ave.) during it's Knight Kit heyday. James Knight Crystal Company was located about 40 west of Chicago, in Sandwich, Illinois.

I visited their plant in 1973, while involved in selling them thermistors. Sandwich was just a dot on the side of (IIRC) US Route 30, even then. I dug up a reference that really surprised me:

http://www.suburbanchicagonews.com/photos/threecenturies/_randall/

The lady is saying that she lapped crystal for Knight during World War I!! If this quote is correct (her memory too), then Knight was making crystals at a very early time in electronics. personally, I think she must have been in a time warp.

Here's a more believable citing, where the James Knight company was being formed at the beginning of WWII:

http://www.arrl.org/arrlletter/97/970801/

And another:

http://www.bliley.net/XTAL/Industry-Hams.html#_Hlk390359909

Hmmm, looks like they finally left town, one way or another, circa 2003:

http://www.sandwich.il.us/econdev/ctsknights.html

There's even a pix of the vacant plant. As you might expect with a company that had been a major employer in a little town, there's Knight street, Knight park, etc....

If you're really obsessed, you might try emailing the local Sandwich officials for more detail.

http://www.sandwich.il.us/cityofficials.html

Seems that James Knight company became CTS Knights sometime in the 70's; was that a merger with another local Chicago company called Chicago Transformer? But that must be another story.

Finally, if you have to name your product line with something symbolic, doesn't Knight just sound better than Rook or Pawn?

Not totally unrelated but interesting:

I worked with a guy who went to DeVry in Chicago and worked part-time, nights for Allied's Knight-Kit division as a repair tech. He once told me the story of a Knight AM-FM tuner that was returned from the builder as non-working.

The tuner had a newfangled Printed Circuit board (this was in the 1950's). Instructions told the builder to completely fill the PC board hole around each inserted component and wire. My friend found a shorted IF transformer on the board and removed it. Thinking the IF can was quite unusually heavy, he removed the aluminum cover to find the entire interior of the transfomrer filled with solder! He then checked the remaining cans on the board....you guessed it, all the same.

He also described a scandal at Knight kit where inside warehouse employees were filling the dumpster with boxed kits during the day and then retrieving them at night.
There was supposedly a big investigation and many firings, that was in the late 50's.

My friend just recently passed away, no more stories, but it was interesting hearing directly from an old Allied employee....bet there's not that many around now.

Thanks for the story -- I also had a friend William Hazard King (later
N6AEK) now SK who wrote the technical manuals for the Knight Kits. He told
the same story of employees looting the kits by trashing them.

Wow Ed - great research -- thanks.
Lets see a Rook Kit -- no don't think so
But a King Kit maybe
However I think Knight kit was the right choice.
I built many of Allied's kits including the a crystal set, Ocean Hopper, and
the R-100 Receiver

Here are some Knight/Allied web sites

http://www.af4k.com/ham/knight.htm

Eh? From the home page at the URL above

: Welcome To Chip Search

: Chip Search is a Technical In-Placement Firm. We service
: high-technology based clients in identifying the right talent for
: their needs.

: Our Clients are various players in the EDA, Semiconductor,
: Semiconductor Equipment, Manufacturing, Systems and Wireless
: industries. We've supported everything from several employee
: start-up companies to literally Intel Corp. - the World's Largest
: Semiconductor Company! These clients have had us identify talent not
: only for opportunities located in Silicon Valley but throughout the
: United States and hopefully soon, around the world.

: Chip Search's specialty is Onsite Technical Employment Assignments.
: We've supported not only Engineering groups while on our onsite
: assignments but at times, we've also supported the recruitment of
: Administrative, Finance, Human Resources, Information Technology,
: Manufacturing, Marketing, Sales and Technical Support personnel. Chip
: Search also provides Research, Online Job Posting/Recruiting, General
: Human Resource Services, as well as Retained and Contingent-based
: Search Assignments.

: Our goal is to provide a quality service to everyone involved in the
: employment process, not only our client companies and their employees
: but also to the applicants/candidates which we identify and build
: rapport with.

Maybe I'm missing something, but I don't see anything about IC sources
there. Ideas?

5190. Help with IF cans on SX-42

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-10-25 20:33:24 UTC
From: porreta99@yahoo.com
Message-ID: <61c031e6.0410251233.24e3a9da@posting.google.com>
Source record: 21451

Hi.

I suspect that the capacitor for the 10.7 MHz filter on one of IF can of my SX-42 is shot. I've been reading about the problem with the silver mica caps on IF cans here but I don't know whether the SX-42 has these caps in the IF cans.

This is my first major boatanchor restoration and I already replaced all paper wax caps and electrolytics and checked all tubes. LO works fine on both frequencies. AM works great but the FM is dead (or anything on the 2 upper bands that use the 10.7MHz IF filters. I can't pass a 10.7MHz modulated signal through the 2nd IF stage. An interesting thing I noticed is that when I inject a 455KHz through the 2nd IF stage and switch the band to the upper 2 (FM bands) the signal gets stronger.

Question: is there a way to disassemble the IF can in the chassis or I have to remove it? How do I disassemble it?

Also, what is the value for the capacitor on the 10.7MHz part of the IF can?

Thanks for the help.

Source record: 21456

Hi All,

I am looking for the following Service manuals:

Tektronix 7403N 'Scope Frame
Tektronix 7A18 Dual Trace Amplifier
Tektronix 7B70 Time base

7403N being the most difficult to get hold of and most important.

I have found a place who is willing to sell me all of the above for US$200 inc. shipping, this seems a bit steep since the 'scope was only US$40.

I have looked at the BAMA site, they don't have anything for the 7000 series.

A CD will a bunch of PDFs will be fine, and hopefully won't cost an arm and a leg to ship to New Zealand.

Thanks in advance for help or a pointer to a suitable supplier.

Mark.

My first rx was the Knight R-100, which I built myself. Using the latest tubes, it was a very "hot" receiver, though its mechanical stability (and overall physical design) were rather flimsy. In fact, most Knight Kits were a bit less than rugged.

Hethkits, OTOH, were mostly rugged but with some questionable electronic design features. But not my DX-40, my first rig -- it worked pretty well all the way.

> TRM.

Since you CANNOT communicate in the manner you wish without going through the eBay boards, that doesn't really work if they don't want to talk to you. They might even try to tag you as an unwanted person and there are implications to that. They DON'T have to respond to you at all technically unless it was specified in the terms of the auction (your contract and initial remedial instrument that you agreed to when you placed a bid) or eBay rules. If you didn't bid you would need to go to eBay as you are a third party and not involved in the contract. Making flagrant accusations without investigation is inflammatory and harmful to the community, and that's why you contact eBay. Whether it works well or not, it's the right way to handle it.

My best guess.

Oh, right. You're talking about circumventing the system completely
and harrassing this person without involving the site. Which means
eBay can and will interpret this as an malicious attack on a member,
regardless of justification. Whether or not you know of a member's
suspicious/illegal dealings, all persons in the community are
considered innocent until proven guilty by eBay and sanctioned or
removed. If you sued Joblow666 for illegal practices and didn't
complain to eBay, even if you won the suit Jo would be lillywhite
unless someone else complained to eBay and won.

The only thing you have to lose by doing that is your membership, and
maybe some time in the Gray Bar Hotel if you violated any state or
federal laws whilst having PHUN.

If that's all you want.

WHAT? It appears you're quoting ME in your replies. This thread started with someone talking about e-mails "appearing" to be from E-Bay - being received. Others responded with how to perhaps deal with it. I jumped in to say that if one gets a suspicious e-mail THOUGHT to be from E-Bay, they send it to Spoof@EBAY.COM..... Someone suggested that - that doesn't work, that a blank e-mail would get the same reply. I proved that wrong and posted the result of doing just that. I offered others to try it for themselves. I then said - in jest I may add, much to the effect that if they didn't believe this was proper, then maybe try to reply to the "spoof" sender to see how the sender of it would reply - differently. How that is circumventing any "system" is beyond me. How that would be harassing them, is beyond me. IF someone sends me a letter via e-mail OR postal OR even calls me by phone asking me for personal information, I do believe that "should" I choose to reply, I have a right to do so, to tell them it is none of their business. It is best to not reply at all.

Personally, "I" know not to reply to those asinine e-mails - so "I" don't have to worry about it. BUT - ANYONE attempting to commit fraud - by the methods referred to, would be more at risk for prosecution than "I" as a recipient of their fiendishness - for telling them to get lost - IF I were to do so.

"I" have no intentions of harassing anyone in or out of the system. I'm smart enough to delete that bull shit when I see it OR report it for whatever good it may do. "I" do not lose sleep over it. "I" am NOT threatening, harassing, accusing - ANYONE. So, I think your comments - 1 do not apply to me and 2 - don't apply period. E-Bay in some ways disavows themselves from certain actions and in many ways will have NO control over any situation. To think otherwise, you're day dreaming. They offer a service - an AUCTION service, not legal protection. I think you better read the fine print of their rules and so on a bit more. IF push comes to shove, E-Bay won't be anywhere to be found to back you in a claim. Yes, they'll bully you if you do harass someone via some stupid tricks contrary to their rules which would undercut their profit OR "IF" they are pointed out to the fact that someone is in fact committing fraud. But that is about it.

I use E-Bay a good bit and have had almost zero trouble. Not enough to even make note of. But others can attest to problems they've had in getting claims resolved. ASK THEM - about LAWS and such that you're pushing as being "violated". Obviously, you've got a lot to learn about how E-Bay REALLY works. For the record... someone sending a message "appearing" to be from "e-bay" need not be an e-bay member. All they're trying to do is get you to fill in your info which goes to their site for them to use however they see fit. So, your example above doesn't wash. Once they get your credit card numbers, they can use it ANYWHERE.

I would remove the coil. Just make a diagram of the color codes etc.

Once you remove the can from the chassis it will be obvious how to disassemble it.

The reality is that the cap is probably OK but that the coil is open. You may find that a connection to the coil on the form may have corroded. I have in the past been able to repair an open IF can by finding this open connection and then unwinding one turn and reconnecting to the terminal

Good Luck

Whoa, I did repeat said test and yes they have changed the format. As
Syl said, now it apparently only accepts forwarded mail. Well, I
blanked out a forward message and sent it Sunday afternoon. I got the
initial canned response immediately and the canned "answer" came thru
yesterday evening.

Guess what. They said it wasn't from them. Go figure.

I wonder if anybody has received one that said is WAS FROM EBAY? I
don't think so. The point I was trying to disprove was your assertion
that they will inspect these requests and inform you of the results as
if some of these emails were valid. In a way they do just that but I
don't think there's as much inspection going on as simply hitting the
canned "its not us" button.

Don't get me wrong, I have no gripe with ebay and have a combined
feedback rating of 800 or so. By suggesting that some of these emails
merit inspection might lead one to think that some requests for acct
info are legit which is simply not the case.

> Also, what is the value for the capacitor on the 10.7MHz part of the
> IF can?
==========

The IF coils in the SX-42 are slug tuned and have fixed mica capacitors across each coil. The first IF Xformer uses a 27pF cap across the primary and a 47 pF across the secondary, the second and third IF Xformers use a 47 pF across both the primary and secondary windings. These are the values for the 10.7 MHz IF coils. You will probably have to remove the IF Xformer from the receiver to take it apart. The increase in gain when you look at the 455 kHz IF amplifier with the receiver switched to bands 5 and 6 is the result of the difference in bias applied to the second IF stage on those bands. The cathode resistor is decreased in value on the higher bands to increase the gain. Your finding is normal.

E-mail me if you need more information.

Bill,

"I" am not trying to argue with you. The fact they just changed formats,
well.... if they did it again today, it would still make fools of us both
for arguing about what "was". :) Yes, when I tried it I got the response
shown, which did prove you wrong - TO A POINT - but not entirely. It still
doesn't mean they do "scrutinize" ALL e-mails. Maybe some. I will agree, to
a point it is canned. . I'm not saying you are completely wrong or I'm
completely correct.. The system isn't the greatest, we can both agree on

that. But it is all they offer! So, we deal with it.

But what I think is even more hilarious is my statement to you of replying to the spoof sender to see their response, and someone else feels I'd be harassing them by doing so - were it to be done. Man, I laughed my ass off on that.

5214. Elmac Marine A.M. transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-10-26 20:57:30 UTC
From: Edward Knobloch <alias@nowhere.net>
Message-ID: <_Syfd.5965$Ae3.5702@trndny02>
Source record: 21475

Hi, Gang

I picked up an old Multi-Elmac "Sea-Rad MM-50" a.m. transceiver,
that was once used in the 2 mc marine band.
I bought it for its parts value,
a 6146 modulated by a pair of 6L6's. But, it seems too nice
to part out (it was used on the Great Lakes, so no saltwater corrosion).
It features a tunable a.m. broadcast band receiver, in addition
to the crystal controlled marine band receiver.

Unfortunately, the seller did not have the separate power supply.
Can anyone point me to a schematic, or at least the power plug pin-outs?

Thanks,
Ed Knobloch

Well clearly they want the things reported to them so they can get the header info and have the bogus sites shut down as rapidly as possible. And they seem to do a good job of that. I wonder what kind of SWAT team they have that can get a page pulled on a server in Romania within hours? Maybe we should send THEM after Osama!

Its still disingenuous and misleading for me, you, them or anybody else to suggest that the answer might be anything other "its not from us". Next thing ya know the phishers will start sending out bogus replies saying "yes, that was us, please log in and give us your info".

Some people have a hard time understanding the level of fraud that exists on the internet. I knew a lady on another forum who got bitten TWICE with those phony Microsoft emails that told you to delete such and such file. When she got chastised for doing it the second time her response was "Why would Microsoft send me phony emails?". She just didn't get it. I guess ebay has an overdose of that mentality around which they have to tailor their procedures.

Not really. It depends mainly on the integrity of the site hosting
the problem. A forward of the problem post/e-mail *with headers* to a
good ISP will cause them to check. If they come up with anything that
user is gone.

>And they seem to do a good job of that. I wonder what kind of SWAT team
>they have that can get a page pulled on a server in Romania within

OTOH there are sites stateside and off shore where catching some one
is like pulling teeth or they just move to the server setting beside
the one they were using.

It's more than some people. A recent survey turned up less than 25%
of the users on the net have a firewall. I'd guess it's probably
around 15%. Most have the mentality that it won't happen to me and I
only open attachments from friends and they'd never send me a virus.
They don't realize most viruses come from someone who had them in
their address book.

>exists on the internet. I knew a lady on another forum who got bitten
>TWICE with those phony Microsoft emails that told you to delete such and

I'm not going to say the average user, but rather most users are completely clueless about computers, the Internet, viruses and scams. They have to be or I wouldn't be winning some lottery or another at least 4 or 5 times a week and being contacted by some guys widow, his estate's law firm, or some government official to get help moving many millions of dollars out of their country.

When I was in Grad School I taught 5 classes at the university level as a GA. They were "The Introduction to Computer Science". I had 195 students and their level of computer literacy was scary. I had one genius who picked up another students floppy disk which had her home work on it. He turned it in as his own without ever even changing the name. Of course he claimed it was an accident and the disks must have gotten mixed up, but as he sat between me and my boss (head of the department) I've never seen a kid sweat that much. We should have put a drip pan under him.

Although that was in 91, things haven't changed all that much. Computer science was involved in virtually every class at that point.

One other note. I wrote a rather elaborate database search program that from the user end was strictly a "click on what you wanted to do and "fill-in-the-blanks". Still, it took days to train 6 people how to use it and it was the same questions, over and over for a full week. The next year I had a "trainer" to teach the same people. <:-))

People tend to fall into three camps. Those who have at least an idea as to what is going on, those who place blind faith in the computer's ability to do what ever with out fault, and those who are intimidated by them.

They may move on, most spammers do, and often its a case of hijacking a server so he as an individual is gone already. What amazes me is how fast these Romanian (not to pick on Romanians in particular but you get the gist) websites get closed down. ebay obviously carries some clout. Maybe they call Donald Rumsfeld first and have him threaten to come over and look for WMDs. That can get nasty.
>

> I'm not going to say the average user, but rather most users are

Roger, we are preaching to the choir. These spam and fraud issues are almost daily subjects (ad nauseum) on any internet forum such as this one. Hell, these scams get reported on the evening network news. You'd have to live in a cave...seems that quite a few people do!

Source record: 21483

http://members.bellatlantic.net/~vze2pdtg/gc1005.JPG
Heath GC1005 clock I had 2 SP-352 with dead spots one completely dead
I converted the anode B+ to a voltage doubler then brought the voltage down
(just above flicker) using a 5K series resistor on transformer wire
(about 210 volts)
Digits came right up nice, been running 3 weeks that way now

Thanks to a member of this board he was able to spare 2 Sperry SP-726's for
the seconds last night
The SP-726 are single anode, 2 "side by side" are needed 22K on the anodes
I think it looks better with smaller seconds ?

Unless the TCS pot/switch is something unique, most repair shops should be able to put the right combination together for you from a standard kit of parts. The shop kits have the parts for different pot tapers, switch configurations, shaft configuration, etc.

Hi Don,

Thanks for the reply. The problem is that the switch is on when the potentiometer is fully clockwise, unlike the usual off when fully counter-clockwise. It switches the AGC on when the RF gain is maximum.

73,

Pete

The kits I worked with had configurations available for on or off at either end of rotation.. Centralab parts as I recall. I just googled for Centralab and see they are out of business, but got 198 hits showing parts are still available. Other manufacturers made similar kits. Good luck.

No Mike, you are absolutely right. And I just spent 30 minutes trying to trace how I DID find those 5204's, and I can't figure out how I did it. I guess it was just one of those cyber miracles. Whatever, the search came down to two vendors, and I noticed one was almost local to me. I ended up placing a PO to http://www.lookic.com/parts/ . I haven't the faintest idea where that reference to the headhunter came from; maybe I better stop doing this after-midnight research!

Centralab still exists, kind of. It was bought out by Philips some years
back, and then more recently Philips spun it off as BCcomponents, which
has been bought by Vishay and is called Vishay BCcomponents. The "C"
stands for Centralab, so it still exists even if only as an initial.
Vishay also owns such good ol' brands as Sprague and Dale.

I looked around the website to see if any of their current product
line is boatanchor-relevant, and noticed they still make 1KV and 5KV
ceramic disc caps, I think exactly the same ones that were in the
Allied catalog in the 60's. No more pots, though...

Folks

The last time I sold gear in this forum I was very pleased with the results so...Apologies for lack of pics but the digicam is acting up.

FOR SALE
National HRO (tabletop case, plate says HRO-MX, can't see serial number). Case has some surface rust but is complete.

Bad News: No coils; no speaker; no power supply; set has been modified (phasing & selectivity controls have been removed) and had some tubes replaced by miniature 9 pin types, others by octal - also has extra tubes fitted.

Good News: All other tubes and coils are there (including the 42 audio tube), tuning gear is complete (and appears undamaged) and turns smoothly.

This is a good 'spares or repair' set offered for sale at US$45

TERMS
Payment is by Paypal ONLY in United States Dollars
Shipping is to lower 48 states ONLY by USPS Parcel Post, FOB McAllen TX 78503
Shipping will be between 12 - 15th November.
Shipping rate will be USPS calculated rate plus US$5 for packaging.
Approximate shipping weight is 35lbs

Why? I am based in northern Mexico and don't have a dollar chacking account (hence PayPal). We get to McAllen every few months for some civilisation and to pick up the mail.

Any queries to adrian_j_r@yahoo.com

Thanks

Adrian

I have an SBE-34 for sale. It comes with two copies of the manual, an SBE microphone, and power cord. I've owned the rig for six years and have used it only a few times.

It is SSB only and covers 3.775 to 4.025 MHz, 7.05 to 7.3 MHz, 14.1 to 14.35 MHz, and 21.25 to 21.45 MHz. It uses a plug-in Collins mechanical filter in the IF.

The rig does not transmit or receive in the 15 meter band. I have not investigated the cause. Other bands are okay and power output measured (on MFJ wattmeter) as follow:

80 meters - 45 watts
40 meters - 30 watts
20 meters - 30 watts

The meter does not work, and the case has a few scratches on it. I can email pictures or arrange a QSO with anyone that may be interested in it. Please contact me should you have any additional questions.

$115 plus shipping and insurance.

Thanks,

Karl - W5QJ

I have 7 or 8 with quite clear glass envelopes, only slight twinge of yellow
in some.
Have no need, $50 for all 7 or swap something "useful to me".
Are from 'days gone by' used in Motorola / GE low band base stations which
were run at 250w from a pair.
I used a pair some years ago in 2M PA at 600w output SSB-CW output.

Adrian,

I bought a coil or two from your last sale.

I am interested in the HRO, even if it is just for parts.

Can you give me an estimate shipped to zip 32951. I will pay by paypal
like last time.

Thanks

George K4MLB

I have an HW-16 and HG-10.
The rig looks almost new.
The rig was in a basement in storage for the past 20 years.
The slugs to the tuning coils for the transmitter L-9, L-10, L-11
are broken.
Is there a replacement or anyone have any?
They were frozen in place and impossiable to adjust with a plastic
tool.
Thanks..

5248. HCRA Auction, 11/7, Feeding Hills, MA

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-10-30 13:50:23 UTC
From: Jim - KK1W <kk1w@arrl.org>
Message-ID: <10o7710b789nkf9@corp.supernews.com>
Source record: 21409

Less than a week to go until the auction. I hope you have all your stuff ready to go -its going to be a busy evening. Here's the info:

HCRA Auction
November 5th, 2004
Feeding Hills Congregational Church
21 North Westfield St.
Feeding Hills, MA 01030 (just behind Dunkin Donuts)

This is well attended event, we usually get over one hundred buyers/sellers every year.
The club charges a 10% commission on the sale (up to $100). This way you're not penalized for expensive items.

Admission is free!

Again this year HCRA has had substantial donations of gear including an SB200 amplifier and spare tubes. These donations plus the usual great turnout of local sellers means another fantastic evening of bargains!

The rules are simple:

1. Amateur radio or computer related equipment only.
2. Mark your stuff with your name, call (if you have one) and a minimum bid.
3. Please combine lots of little junk into larger lots (or the auctioneers will do it for you).
4. If it doesn't sell - you take it home. (HCRA is not a disposal center)

HCRA is offering a great raffle prize this year. For a $1 raffle ticket you could go home with an Icom IC-703 HF QRP Radio! Since admission is free you should have a few bucks in your pocket for raffle tickets!

Also this year will be a memorial collection for WB1Z, one of our past auctioneers. Jim became a silent key this year after a battle with cancer. The memorial collection will be matched by the club and donated in his name to the ARRL Foundation. Please be as generous as you can for this worthwhile cause.

Additional information and a map with driving directions can be found on our web site at: http://www.hcra.org or by calling Jim, KK1W at 413-245-3228.

Thanks for reading and I hope to see you at the auction on November 5th.

Jim, KK1W

<MUCH> tougher laws and punishments are needed - to "help" out in this area. I say help, because it won't be a total and/or immediate cure. Though some laws are coming out, they're slow and "untested". This is still a "new" arena for the law makers, many of whom no doubt are still stuck in the stone ages - mentally. They fail to keep up with "current" demands and issues. 20% if that is the number, is pretty steep - and that isn't taking into account the many who get online - new - each day. They get sucked into this not knowing what to expect. Be it ripped off or a damned virus. My opinion, take all those ass holes out - responsible for that - and execute them. They're not worth any more than the terrorists we're trying to protect the citizenry from in other areas. Once people see stiffer punishments being carried out, they may stop and think about doing it again (if they've not been caught yet) or in the future. This country is getting more and more like the lawless Wild West. Laws are put into effect every day, yet more and more are being broken just as fast. What good are laws, if not adhered to?

To those who "may" be new on here, DO NOT trust "everything" you read, especially any e-mails coming your way - in particular from strangers. BEFORE you open up any files - even in newsgroups, READ some comments from those who've been around or know the tricks that are used by the scum bags. It could save you some grief.

I got an e-mail the other day from a friend of mine which reported 3 of the competing Online Servers are suing some people who were accused of sending out canned spam - as per the Can Spam act. Spam which has no traceable address or at least no way to tell them to drop you from their list. Will they win? We'll have to wait and see. Will it stop them from doing it again? Who knows. Some people never learn. Stay tuned!

Gil,

Try Lashen Electronics in Denville. They used to stock lots of components.

You may have to go down the mailorder route and make a bulk order for your resistors and capacotors to Mouser Electronics or Digikey. Their prices are usually
less than local outlets and the electrolytics are new. Mouser does not have a minimum
order.

I have a LM-7 frequency meter for sale.

It's in fair to good condition. The power receptacle on the side has been replaced with cable and octal plug. The calibration book is missing. It's intact with all tubes and crystal. Have not powered it up so I don't know it it works.

Price is $20 plus shipping from zip 07737.

That's a shame too, because those Centralab 3/4-turn, about inch diameter, sealed pots were nearly indestructible and very reliable. Can't even imagine how many of those I stripped out of surplus for other projects. Remember that yellowish varnish-like spray on that old mil gear; was in called Humiseal?

Jack -

I did not catch the callsign.

Spend some time on the Internet, and you will find a wealth of Heath-kit information, support groups and replacement parts. GOOGLE.COM is to the library card catalog as the Internet is to a library.

For the SB104 transceivers, start with the K5KCQ web site
http://www.qsl.net/k5bcq/sb104/sb104.html

N4NRW has a master parts list
http://members.tripod.com/~NRWILLIAMSON/index-2.html

Don Williamson has many Heath manuals (Heath is still in the educational business - but no longer sells kits -- and still sells manuals for many of their earlier kits)
http://www.d8apro.com/heath2.htm

Although some will think this off topic I think it pretty well
pertains to all newsgroups. Sorry about getting long winded.

>To those who "may" be new on here, DO NOT trust "everything" you read,
>especially any e-mails coming your way - in particular from strangers.

And don't trust attachments even if they are from friends unless you
are expecting them. In general you are most likely to receive a virus
from someone who has you in their address book.

No one should be on the net without a firewall and virus checker.
ISPs are talking about blocking customers with infected machines and
not letting them back on until they can prove the machine is clean and
safe with an up-to-date firewall and virus checker.

If all of these infected machines were booted off it would remove one
of the current main tools for spreading viruses and spam AND it would
make the end users far more diligent about keeping up-to-date and
practicing safe computing.

First, to the newbies and some not so new. As TRM said; never open a link in a post that contains nothing except the link, or wait until at least several others have opened it first and commented on it. Don't even open the posts that appear to be out of place on a news group such as "so and so caught naked", or along those lines. The links can take you to sites that can plant malicious code on your computer. Code that can log key strokes and give others access to your computer and the files on it. Some of that code will download thousands of adds, and addresses, turning *YOUR* computer into a spam spewing zombie. As I mentioned before; as I recall, the last figures I saw estimate that over 20% of the personal computers on line are infected with viruses, worms, or have been turned into spam spewing zombies. That is millions of computers! It's no wonder the net is slow at times.

A recent article titled "20 Minutes" said the average "unprotected computer" hooked to broadband such as cable will be infected within 20 minutes.

As a wake up call, when I went to a page last week I had a window pop open to ask where I wanted to save the file? What file? I hadn't tried to download anything. Just visit a page I visit nearly every day. A quick view of the source code on their page showed it was trying to install a program on my machine. His page was infected! My firewall, virus checker, choice of browser, and browser settings saved my machine.

The "Can Spam Act", better known in computing circles as "Eat Your Spam Act", is a prime example of the unknowing trying to regulate something.

It requires the sender include a <Click here to Remove> from the mailing list, when in fact any one in-the-know, knows better than to reply to any spam in any manner except to the abuse desk at where ever.
That many use this method to verify the address seems lost on the law makers. Of course they managed to exclude them selves, charities, and religious organizations for some strange reason.

At least they did include the requirement for a valid reply to address which is about the only thing the spammers are getting caught by. OTOH some ISPs such as AOL are taking some of them to court in civil actions.

I'm pretty sure they will win the specific cases, but I don't see it as much of a deterrent. The spam and scams are just too lucrative. Even if they only received 1/10 of one percent returns they are making fortunes and by that I mean many millions of dollars.

Another reason for not using HTML mail readers, or turning it off. Opening an HTML mail to see what's in it can easily verify the address and any adds opened count as money in the spammer's pockets.
>
I do think that the companies in the adds should also be held

responsible. I called one well known company to complain about spam and pop-up adds for their company. The response: "We just hire the advertising company. We aren't responsible for the way they advertise our product".

As a final note, Never, Ever, click on a link in an e-mail to up-date your operating system. If you use Windows never use any route except "Windows Update", or by going directly to the proper MS site. Don't use the links in an e-mail to get there either.

I could write many pages on how to do "safe computing" but the ones who need it wouldn't read it because they know it'll never happen to them.

great fondness for knight kits as a "tinkley park" ill HS student

Back Then The precursor to the flea-market was (in CHICAGO) MAXWELL STREET....a mess of dreck of that type could always be found in somebodys stall...As kid,I picked up a NIB Hammond Organ 12" speaker...weighed a TON ! figgerred the magnet must be a beast as it was enclosed in a can as big as a 16" softball...

Imagine my chagrin when I couldnt get any sound out of it and looked at a HAMMOND organ schematic and found they used the speaker as a choke in the plate circuit of the output stage...a damn electromagnet-speaker !

newark electronics is an industrial electronics parts supplier with a
catalog the size of the Manhattan phone book. They send it for free,
but you might have to send it to a business address. I ran part of a
small software company that did odd projects that needed the
occasional electronics part, and Newark was always happy to take small
orders over the phone with a credit card for payment.

Hello, I recently picked up a National 1-10 Receiver that dates from 1936
It is complete with all 12 coil packs, it's doghouse power supply and the
instruction manual. All in good shape. I was thinking of selling it again
but I can't find much information on these radio. I'm looking for
information regarding its estimated value and if it is a collectors item
that would attract people if I put it on ebay.
Best regards,

Nico PA3ESA

I am always trying to invite folks to send photos of their radios for the Archives but confess that, with the ongoing (and sadly stalled) database project at the Archives, I have slacked off lately.

Everyone who frequents this NG is hereby invited to send photos of your vintage communications equipment to the Radio Attic's Archives at archives@radioattic.com! It may take me a while to get your photos published, but I promise I will. Eventually I'd like enough amateur gear displayed to require a special site just for that!

Message-ID: <94CdneJLpbfwiRrcRVn-hg@centurytel.net>
Source record: 21347
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

My fellow hams,

I need a FULL manual for a Knight T-60 transmitter, including the assembly instructions. I checked the BAMA, and they only have the operating instructions. I have pages 1 through 18 and the schematic, but I need the missing pages (19 through ???). Could you copy your manual and snail-mail it to me? I'll be happy to cover your copying and postage costs. You can scan it and email it if you like, but making a Xerox copy might be less work. Your choice.

Thanks and 73,
Dean K5DH

5287. Dual roller inductor for antenna tuner or amplifier

Newsgroup: rec.radio.amateur.boatanchors

Source record: 21348

I have a large dual roller inductor on eBay.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48711&item=5729365941

Formerly motor driven, removed from commercial HF transmitter.
Silver plated, 3/8 inch edge wound, 4.5 inch outer diameter.
Total length 11.75 inches, 44 turns. Unknown inductance.
Dual contact wheels on each coil, plus what appears to be aux parallel
contacts for lower inductance as required. Looks like 1/4 inch shafts on
each coil.
Outer insulator frame measures 15inches x 5.5 inches. About 18 inches
total length.
Needs to be dismantled and cleaned, few bolts and tension springs
missing. I can see no reason this would not be fully functional with
minor work.
Coil is packaged and ready to ship.
Pictures here.
http://members.rennlist.org/warren/coil1a.jpg
http://members.rennlist.org/warren/coil1b.jpg
http://members.rennlist.org/warren/coil1c.jpg
http://members.rennlist.org/warren/coil1d.jpg

Also have another coil which may be put on eBay later

Message-ID: <QIMhd.12489$OD3.707262@news20.bellglobal.com>
Source record: 21349

Someone recently asked me about a piece of old radio gear quoting the number SCR-59.
They also mentioned a 1915 date! Which may indicate it is from W.W. One?
Any suggestions about a source of information for such an item. My access to "Military Equipment List" starts at SCR113A.
Any advice welcomed. TIA.
Terry.
PS. A few miles from where in 1901 Marconi received the first Transatlantic wirelss telegraph signal.

5289. TV7 Bias pot

Newsgroup: rec.radio.amateur.boatanchors

From: Francesco Sartorello <francesco.sartorelloREMOVE_THIS@virgilio.it>
Message-ID: <SRPhd.116058$b5.5743796@news3.tin.it>
Source record: 21350

Hello everybody,
I am looking for the TV7 R129 Bias pot, mine was open and collapsed when inspected. It is a 3K ohm wire-wound with a special taper, approximately 25 per cent resistance at half rotation. Tried to use a linear 3K wire, bias voltage is fine at 50 but twice as necessary at 22, the most common range in use. Any suggestion?
Thanks, Francesco Sartorello

5290. WWII- surplus

Hello group, I have for many years had on my basement shelfs some US-military radio units, a few days ago a guy had heard about them (XYL wanted them out?) and asked for a price if for sale. Most interesting, I think; is a BC312 RX, there is also a BC348 rebuilt for 220V as well as a SCR522 (spare for the 2-m tx I built long ago, very long ago :-( ). Anyone have a ballpark-price, I have not seen any of these things for sale in modern times, so have not the faintest idea!
Tnx in advance es 73 /per/sm7aha

From: Dale Parfitt <par@parelectronics.com>
Message-ID: <f3Uhd.3107$cA4.748@trnddc01>
Source record: 21353

Hi,
Anyone on the group have experience with eliminating backlash in this slide rule dial? It is not severe, but does make tuning SSB a tad more difficult than it should be. Almost impossible to see visually because of the 110:1 ratio.I would have expected to see the main gears spring loaded against each other- but do not see this on casual inspection.

Tnx,

Dale W4OP

Source record: 21357

Hi,

Wonder if anyone can help.

Q1. Fresh off of eBay, this SA is having terrible problems with input RF leaking straight through to the IF on the lowest RF range. I assume that the input mixer is shot (441-0671-03).

If I remove the LO feed to this mixer, the expected signal goes away, but the crud remains. I assume that the IF on the lowest RF range is close to one of the broadcast bands (TV or FM).

The mixer assy has two diodes which look like they should be easy to replace. Does anyone have a schematic for this assy or maybe just tell me what these devices are and some idea where I might get replacements.

Q2. I feed in 144 Mhz and crank the SA centre frequency lower (130MHz) and the trace shifts left (I rather expected it to shift right). I assume that this could be connected with the busted mixer ?

Q3. This one is definatly operator error. The mid range 'B' has two scales 270 - 900 and 800 - 2000MHz. How do I switch between these two ranges (!)

Thanks in advance.

Mark.

That is a design feature of this spectrum analyzer. Because the 491 has
an unbalanced mixer, the IF feed through is actually several dB stronger
than the desired mixed signal.

When Tektronix made this design, they had no idea how to build a decent
spectrum analyzer. They basically copied the design of the 1L20, and
stuffed it into a 453 oscilloscope frame.

The scheme used in this unit is different from that used in more competent
analyzers. What they do is use a swept IF that tunes 200 MHz from the
FM broadcast band through the VHF TV band. There is nothing to keep
the swept IF band from coming through the mixer when you are in the
lowest RF range. In the higher ranges, there is a high pass filter that
will filter out the IF.

Your unit is working correctly. 491's are all but unusable instruments.

Up for auction, a one owner vintage Boonton Radio Corp 202-B FM Signal Generator, serial number 278 in excellent condition. This was owned by a RCA Head Designer in his private shop and was working apon his retirement, but due to it's age is sold as is with no reserve. I'm not familiar with these units, but will answer anything if I can, so don't hestitate. Winner responsible for payment within 7 days, either by cheque,money or or bank draft. Paypal is also accepted but the buyer assumes all service costs. See my other vintage broadcasting items up for auction, all with litle or no reserve.

Chuck,

Thanks. Everything you said makes sense so I can stop pulling my hair out.

Any recommendations for an SA on the second hand market
100kHz to 5GHz in a single sweep
> 70dB dynamic range
Doesn't use harmonic mixers
Option to attach a tracking generator is a huge plus
Doesn't cost a fortune.

The last item be being negotiable (pun intended)

Regards, Mark

Seems likely but mull this over.

That description, KWM-380, with options xxx and yyy, has been run
several times over the last year. Fool me once, shame on you.
Fool me twice, shame on me?

The grouping, not one but several separate listings, has run each
time. Why? Does someone get ensnared by two or three of the same
scam at a time?

This time, there are 30 or more listings with different stop times.
How does that make more for the scammer?

So.

Again.

What's the story?

I'm hunting for a so-named 12V WW-2 transmitter. For a picture
see

qsl.asti.net/kasserine-russ

A look-alike is on left but it's the airborn model called the BC-375.

For current purposes, a nicked-up but complete example would do. I'd
like to put it on 80 meters. The '191 & rcvr (BC-342) shown would be
the centerpiece of a SCR-188A forward air-base HF station.

I do have a 110V power supply (RA34H) & a set of tubes too.

Will be at Lawrenceville, GA hamfest Saturday 11/6

Thanks!

Marty AA4RM

>i plan on trying to put it back on the air

A very fine rig. I had one, and sold it cheaply because I thought the VFO tuning capacitor (gearing to the dial digits) was shorted, since the receiver went dead at various points on the dial.

Turns out that it just needed some Deox-It sprayed on the rotor wipers (I did this after negotiating with the buyer and setitng a price -- then I fixed the rig!).

I just wanted you to know that if you have such a problme, it's easy to fix. You ahve to unscrew something over the tuning cap to get at it, but it's not hard.

Enjoy the rig -- Mike K.. AA1UK

RAAs are rare enough that one doesn't ask about condition! 1944? Are
you sure its not 1934?

Seriously, to those that have never seen and RAA (or RAB), a first
glance at the innards will leave you stunned. Never again will you see
such overengineering.

I wish I could get it - I have an RAB-2 (the HF brother to the RAA)
that needs company.

I am in the process of selling some equipment on e-bay, and I wonder waht is the most secure way of receiving payment from foreign countries...probably the far east, as tubes are involved..My previous experience has been minimal, and my bank balked at foreign money orders, and one bank actually wanted to charge me to cash it..I don't do PAY PAL, so what are the options...Are international postal money orders through the USPS workable...what about wire transfers, for small dealing ($500.00 or there abouts)...Would appreciate the groups expertise...I will follow the thread..Thanks...

I spec "international money order" and many times, the seller sent me a US-generated Western Union Money Order (probably from a paypal account).

One time I had a buyer from HongKong buy some tubes, total about $175. He sent me a registered letter direct from HongKong via airmail express. Opened the envelope and there were nine crisp 20-dollar bills inside.

BTW, I only ship overseas using USPS EMS, Express Mail Service, it is traceable with a tracking number, gets to the Orient in about five to seven days and is insured. Check with the Post Office website for the service.

Good luck.

Source record: 21386

This hard-to-find surplus conversion manual was published in 1948 when there were a lot of excellent military radios and test equipment on the surplus market available for pennies. This volume covers the BC-221, BC-312, BC-348, SCR274, TBY and many more. I discovered I have two copies of this manual and therefore it is surplus too! It is in pretty fair condition; some of the cover ink has transferred itself to the forst few pages but this is very slight and does not really affect the readibility or legibility of any pages. There is some slight "rippling" to the pages but again this does n ot detract from the book's readibility at all. I only mention it because you are buying it sight unseen.

I am asking $15.00 including postage for it. If interested please reply by e-mail.

73,

Michael

I've been doing these transactions since 1997.
First- you limit yourself by not working with PayPal.
I hear a few horror stories, but I've had excellent service
since they started and the fees are very reasonable.
I think you only hear about the 1% that have trouble.
It makes for better stories ;-).

Most of my tube transactions with Asia have been either PayPal
or International Postal Money Order, denominated in dollars.
A few have even sent cash, although this is generally a
European thing. I once got 5 Euros,
which I accepted just for amusement's sake.
My bank (Bank One) has never given me a moment's trouble
about the money orders.

Do NOT agree to a wire transfer to your bank account.
Never give an individual your bank or credit card info.
Many times, these are scams designed to harvest your
bank information, then harvest your deposits.

I recommend PayPal. It's the future.

There have been a couple of attempts for scams from England. But it's not through Ebay, rather just open market, like Eham. The guy will say, "For your $250 item, I will send $1200, take your $250 and get a Western Union for the difference and send the rest back." I think they're attempting money laundering. Never got the check, though! Still have the item for sale!!

We also use PayPal- hundreds of flawless transactions. Although we have done some wire transfers, be aware, your bank will likely tack on a $10 fee or such.

I suggest you start doing paypal. There basically is no easy way of
dealing with this for many countries. A lot of folks can get money orders
in dollars sent to you, but in some countries (like Germany) this is not
possible. There used to be some services like c2it that would allow folks
abroad to use their credit cards to send you a check but I don't know of
any left. Paypal is really the easiest route to handling these things.

You _will_ pay money to deal with foreign money orders, and you will also
get the worst possible exchange rate as well. Surprisingly you will get
a much better rate with paypal or a credit card than you will at the local
cambio, too.

Wow. I had an RAK (IIRC) VLF Navy set, that I could pick up by myself back then. It was over-engineered enough -- inductors and a tuning cap that looked like a KW antenna tuner. The separate PS had a ballast bulb that looked like something out of a searchlight. And it worked great -- WWVB any time of the day, and who knows how many useless encrypted Navy RTTY stations.

But even it couldn't get that Swedish station, from the Midwest. I traded it for an HF boatanchor rx.

>I wish I could get it - I have an RAB-2 (the HF brother to the RAA)
>that needs company.

I'd have loved to get the RAL, the regenerative HF brother to the RAK. I have never operated such a smooth regeneration control as what that RAK had -- you could peak it for max AM sens and select, or just drop it in to hear weak CW. Would be fun on HF.

Source record: 21298

I worked for LRE for a short while starting during their "last days". Employed at Company store #54 in Milwaukee WI 1973 thru 1975. LRE opened this store as the first Wisconsin Company store in 1973. They had about six stores in the Chicago area for years. LRE epanded to two stores in Milwaukee before folding in the late 1970's.

During our store's grand opening, I got to meet Abe Plettman (the CEO) and a few other LRE big-wigs like Harold Weinberg, their audio guru, creator of the "Criterion" speaker line.

I also met Larry d'Amato, the leader of the ham/cb line.

This was when LRE was spending bookoo bucks on expanding company stores all the way to the west coast. I think the expansion killed them.

When I was managing the store, I remember calling Syosset Headquarters to check on backorders, we were plagued by import backorders. HQ's phone system was so antiquated, we had to call back numerous times after getting disconnected. Call forwarding was done with "switchhooking". Many of the people that I remember talking to were well up in years, a couple were deaf and we had to shout to them while calling.

Looking back, LRE's massive expansion was doomed from the start. Imported CB radio's were continually backordered, angering the dedicated customer base that went elsewhere. The discount "warehouse" stereo stores undercut LRE as they rose to retail power at that time.

It was really fun working for them at the time. We employees could buy things at actual cost. For instance, the premium CB radio Comstat 35 which retailed for about $200 cost me a mere $68.00. Talk about markup! LRE made a killing on their Jap imports. Employee buying was closely monitored as many employees were buying CB radio's at cost, then re-selling them to supplement their meager income. Salespeople were grossly underpaid compared to other stores at the time. You sell a 800 dollar stereo system and may only receive a commission of $3.00. Pretty poor.

Just some ramblings from a former LRE employee.

BTW, I was making an incredible sum of $200 per week in 1975 when I was promoted to store manager. That equated to about two bucks an hour considering all the "store hours" I worked!

I left LRE probably two years before they folded. Gotta wonder where all the parts and inventory went! LRE kept a huge cache of "import parts" at Syosset. You could order an s-meter for a 20-year old CB radio if you wished. We kept the parts list on microfiche at the time. They probably had tens of thousands of individual parts for every CB, tuner, stereo that

they sold. Incredible.

AFIAK, the two stores in NY (100 Ave of the Americas (aka 6th Ave) and Jericho Turnpike) were all there was, circa 1963. I used to go to the 6th ave location once in a while. A few months ago I sold my 1963 edition Lafayette catalog on ebay for a few bucks. It was a time capsule.

I've always been fascinated with long-established single-store operations that expand like crazy and then go out of business. Lafayette Radio did that. The Wiz is the most recent I can think of. My pop, who was in what is now called Venture Capital said that what happens is that original owner wants to retire and sells the business to a developer who runs the company for a couple years in a manner that made the books look really good and then writes a business plan to go public and expand, so it's the investors and stockholders that are left holding the bag in a few years. The children of the original owner, and the first buyer are in the clover.

The only thing I can remember was that we called Lafayette "Laugh-a-Lot" Radio. They had their place, back then, to be sure... long before the current RatShack came along. I still have a Lafayette bug.

Beginning in 1921, RadioShack would grow to a handful of stores clustered in the Northeast, and become a leading electronics mail-order distributor to hobbyists. This is how it would remain until the company and a young Texan named Charles Tandy crossed paths four decades later.

So when did Lafayette start ???

I have a nice speaker that matches the older National receivers; NC-183, NC-97, NC-120, etc. The one wioth the NC logo in the middle. Looking to swap for same condition Hammarlund speaker that goes with the HQ-140, etc. receivers. The larger H logo is at the top/center and the is typically hammertone. Thanks!

Thanks to all for a wealth of information. Now then...ahem...does anyone know anything about the Model 390 Starflite ham transmitter? I believe early Kenwood or Yaesu was manufacturing their other ham rigs but the Starflite was a kit and I am wondering if it was an American effort on the part of Lafayette? The circuit was almost identical to the DX-60 so I am wondering if anyone knows if there was a Heath-Lafayette connection? Why was the Starflite only offered for a year and a half or two years? Was it a dud? Or was Heath and the DX-60 too much competition? Too many questions, I know. I am doing a little research paper, of sorts. Thanks guys.

Phil:
At $9 they are cheap. They will undoubtedly go for more now. I doubt that they have anything to do with a bridge. Probably used in a oscillator, generator or analyzer of some type. Hard to tell from the photo, but I'd guess they could be used as nice shielded coil forms for some homebrew project.

Hi,

I have a pile of these which I am pretty sure go with one of my Q meters. I have used them to check calibration on RLC bridges.

Hi:

I used this HX-20 back in the 70's to work about 80 countries CW and SSB with 5w. ouput. The unit is rated at 20watts. Includes a homebrew power supply which lacks the 5Y? rectifier tube.

Hasn't been fired up since the 70's

Cosmetically, about a 4.5 on 10 scale.

Anyone interested, please contact:

Ade Weiss
aweiss@usd.edu

5349. FS: Pierson-Holt KE-93 Power supply

Newsgroup: rec.radio.amateur.boatanchors

This power supply came with a KE-93 which I then gutted and converted
to solid state -- was a fine receiver before and after the conversion, but
in its present state, I don't think that it could be returned to its original
tube configuration without a whole lot of work! Manual included.

If interested, contact:

Ade Weiss W0RSP

Funny, the others reminiscing about NYC and Chicago. But I remember when there
was a big Laughin-Yet store on Comonwealth Ave in Boston, about 1967. I always
assumed Lafayette was a Boston-based outfit, and that was the "mother" store.
Guess I was wrong.

I used to take the subway once in a while and ogle the wares. I cam close to
buying their "inmported" 6m AM transceiver, but ended up mail-ordering and
building the Knight-Kit equivalent instead.

Funny thing is, there was a Radio Shack store of equal size (big) a block away.

These was a Lafayette store in Buffalo, NY. Around 1970 or so it became Purchase Radio, which gradually turned into a Hi-Fi joint. Purchase opened 3 more branches in the suburbs, then vanished in the late 1970s.

Your sentiments are world wide. But to be correct, only 51 percent of the population voted for him. So there's still hope.

Nevertheless, the USA, with the aggressive populace armed to the teeth and with 15,000 gun-deaths in the homes and streets of US towns and cities every year, has taken yet another step towards the next civil war.

Who needs suicidal terrorists?

Actually, only roughly 30% voted for him. If all the potential
voters who didn't bother to vote had voted for me, I would
have gotten more votes than Bush or Kerry. Scarey, huh?

"Moron" vs. "Insane suicidal murderers" - not a good situation, I agree.
However, our only other option was a wimp.

>Don't you care what the rest of the world thinks of you?

Certainly I do. I want to be known as the country who helped to wipe out
the insane suicidal murderers.

>Don't you care what impact
>American foreign policy has on the rest of the planet?

Well... yes I do. If we could meet with more cooperation, there would be
much less destruction. This planet is running out of room for dictators.
The destruction in Iraq is being caused by power hungry idiots who think
they can become the next dictator - not by the US. We are attempting to
stabilize the country. We have attempted to help rebuild the country and
the insurgents have murdered the civilian contractors that were there to aid
the Iraqi people.

>Does Iraq look like a success
>to anyone?

Iraq never looked like a success - even when Saddam was in full power. Iraq
could have been a success - but it had a nutcase for a leader. Here you are
in the middle of the "black gold" center of the world and most everyone
still rides camels. That is why this crap happened to it. I have a lot of
hope for the Middle East. I suspect it will eventually rule the planet -
but certainly not with its present attitude - and certainly not without
being united by a common vote of the people.

>Doesn't it bother you that he's alienated every friend you have?

Bush is my buddy. We have the right friends. It was your choice to avoid
friendship.

>Prior to this, it was American policy and the American government that was
so universally
>hated around the world. Now it's going to be 'Americans' we hate.

Hate breeds war and more destruction. When will the folks of your persuasion realize that you need to stop hating? If you are an Iraqi - you should help us help you instead of fighting to support your hate. Look at Japan. A relatively small country that is a HUGE success. They smacked us. We had to smack them back. But we didn't leave them behind - and we won't leave Iraq behind. We all sincerely wish the fighting would stop, but it is clear that Iraq would remain unstable as ever if we just left. There are still way too many "would-be" dictators and nutcases.

>More sympathy
>for Bin Laden... More attacks on American institutions... More isolation. How blind
>can you dumb rednecks in middle-America be, not to see this?

More sympathy for an insane murderer who stirred up a massive wasp nest that stung everyone on the planet - including you? And you call *us* stupid? Bin Laden is the one who caused all of this! Bush HAD to make policies to stop this type of stuff. Your enemy *IS* Bin Laden and people like him - not the US. You can't see this?

>If you get hit again, or your economy goes into a deep depression, the American
>people will be getting exactly what they deserve!

You don't want that to happen. Believe me. You think it's bad now? Do what you can, on your side, to stop breeding hate - and the pyrotechnics will stop.

Personally, I don't give a rats ass if you like the US or not. Funny, all you fags hate us, but yet you come to US for financial aid at some point - EVEN if you have money from oil. If ya don't like US, then quit trying to get on our welfare roles. I'm sick and tired of all our tax dollars going to you scum bags while our elderly and others go untouched with aid. You're all

a bunch of wimps. Our soldiers will do hand to hand combat with you any day of the week. Your people couldn't fart without holding a knife or gun. YOUR people couldn't hold anything over our guys in hand to hand combat. Hell - our female soldiers have more balls than you scum bags. US FOREVER - ALL ELSE (WHO HATES US) - DIE.

I worked for Lafayette in Jamaica, Queens, New York 1963-1964. This was my first job and I sold Ham/CB Equipment. I worked for a sales manager named Sandy who worked for the store manager Nat Raucher. George "The Greek" sold hifi and camera and the rest worked hard hours "Over the counter". You could by any component from a single carbon resistor to a case of electrolytics over the counter. Two young engineers (RCA Institute grads) met to discuss some simple designs of ham and cb equipment had their prototypes done in Japan and then marketed them here. I think this was mostly for the simple but inexpensive cb's and some ham gear like their 6 meter am transceivers. I didn't make much money but the employee discount was good and I bought my first transceiver the National NCX-3. The American Electronics industy was a good viable source of income for many people and at the time I thought it would last forever.

For anyone interested in the complete pair (RX and AC PS), I will be posting mine for sale in a day or so. Ya know, there were probably transistor receivers that were larger than the KE-93 -- that radio is REALLY compact for 12 tubes. And a super performer on the BC and Tropical bands. And a squelch system that really works!

When you converted your KE-93, did you jsut replace each tube, fnctionally, with a transistor or two, or did you do some major redesign of the IF system and detectors? Like add a product detector?

That's a beautiful set! Nice job! I like radios of that vintage too.
Does it use the Type 35 tube, the first screen-grid (tetrode) with variable-mu,
for AGC control? That seems like a logical place for the "35" to come from.

Also, how does the dial pointer work? The ad shows a simple external wire
pointer in front, but there's none on your set. Is it just still missing, or
is there a lighted shadow pointer behind the dial? Some sets of that era used
this very sexy arrangement -- I had a Freshman-Belmont with separate AMBC and
SW tuner chassis that each used that type of dial pointer.

There were some discussions a few years ago about who made the first
band-switching RX (no darned plug-in coils). Yours must be a contender for the
title.

Say, how about some chassis shots? Pant, pant ...

I'm rebuilding an old Heath Apache TX-1 and I'm having a problem with the bandswitch dial cord routing. I had no problem figuring out and stringing the main tuning dial cord, but I can't for the life of me figure out how the bandswitch dial cord is supposed to be routed. A text description would be fine, but a picture out of the assembly manual or a digital pix would be fantastic! I must be missing a pulley or two, but I'd be very happy to be proven wrong. Happy to pay for copying and postage if necessary!

Also looking for cabinet feet for the Apache.

Thanks!

Steve Bauder, NX9Z

Like new FT-890, with 500Hz cw filter installed, manual, mic, bracket, power cord. CAT system and auto-tuner.

$520 shipped to U.S. address, fully insured.

Thanks,
Bob
W1CNY

Yah, but with something like 43,000 automobile deaths (cars die too,
mine did right in the driveway this morning) and no one gets excited,
why get concerned about 15,000. We need to outlaw cars first.

Actually accidental deaths by guns is its lowest since 1907 and
violent crime is at its lowest in 20 years even with the economy
suffering a tad.

While the rest of the world is seeing strong increases we are seeing
decreases in violent crime. In addition, every state that has passed
"right to carry" laws, firearms crimes have gone down.

Contrary to popular belief outside the US we are just normal people
and it's not at all like the old "Wild West". OTOH a high percentage
of the population does own firearms.

Now, I gotta go clean my AK-47. Deer season is opening soon.

I've read that there was no connection other than Lafayette stole,
ah, honored the Heath design by copying it.

I was a Novice when the Starflite and the DX-60 were marketed and
thought hard and long about it, the Knight T-60, and the Eico 720.

Smart move, I bought the DX-60 kit and assembled it. The DX-60 was
much more substantial, as in heavy steel plate, than the
competition. The cast iron meter bezel alone stood out as unique
in the entry transmitter market.

I knew a fellow who got a 720. More expensive than the DX-60. Could
never figure it out as the 720 didn't include an AM modulator.

Bad move, I sold it a couple years later for $40 to put toward a
$200 used HT-37.

Fast forward 40 years and I'm buying a DX-60 off eBay for $70. Not
a nice as the one I built but looks restorable. I got the DX-60
as opposed to a 60A or 60B because of the meter bezel.

Hello group, I have for many years had on my basement shelves some US-military radio units, a few days ago a guy had heard about them (my XYL want them out?) and asked for a price if for sale. Most interesting, I think; is a BC312 RX, there is also a BC348 rebuilt for 220V as well as a SCR522 (spare for the 2-m tx I built long ago, very long ago :-( ). Anyone have a ballpark-price, I have not seen any of these things for sale in modern times, so have not the faintest idea!
Tnx in advance es 73 /per/sm7aha

Mark:

Read the manual. There is a list of 11 operator traps and you've identified
one of them- the trace shift in the opposite way you'd think.

The 491 uses an I.F. of 100-200Mhz so what you see are all the local FM
stations leaking through. You can get rid of the stuff by using a low pass
filter that cuts off at 80mhz or use a high pass filter that passes all
above 108Mhz.

If you don't have a manual you'll be lost as some of the mixer inputs relied
on harmonics. Companies like W7GU have manuals

Thanks. I'm hooked on radios from that era. The one radio Im still in need
of is the RME-9. I know. Good Luck!

> Does it use the Type 35 tube, the first screen-grid (tetrode) with
variable-mu,
> for AGC control? That seems like a logical place for the "35" to come
from.

No. In 1935 most receivers started using the new metal octal tubes and this
is one of those sets. I think Hallicrafters SX-9 was the first to use all
metal tubes. I'm still reserching this set but it may have been the only
kit that year? There were several versions of the Browning 35 if you look in
Raymond S. Moore's books. This one is the metal tube version and it has a
factory 6E5 tuning eye and he makes no mention of this set with that tube.
The tube lineup is as follows- 6K7 RF, 6A8 Conv, 6K7 IF, 6K7 BFO, 6H6 Det,
6F5 AF1, 6F6 AF out, 80 Rec. The one in Moore's book show a 6C5 as BFO?

for the

> title.

The Lincoln R9 I think was the first in 1933. By 1934 most of the main contenders had bandswitching. Sargent,Postal and RCA had receivers that didn't still. Most of the main mfgs had receivers with bandswitching by 1935. The Browning uses the prewired Tobe tuner with band switching for ease of construction.

I am looking for a tube type transmitter to go with a HQ-100 receiver.
Would like it to have AM..doesnt matter if it is screen grid mod or not.
Lighter if it does. 50 Watt class.

I was fortunate to be given a near perfect Hammarlund speaker to go with
the reciever. Man! those are hard to find.

There are several dealers on the internet who can provide good copies of most manuals. Since this was a popular radio, I'm sure one of them will have it. Just do a web search.

I just picked up a National RCE-2 supplied to the CAA by Radio Receptor Corp. It covers 5 bands 200 to 400kc, 1.3 to 2.8, 2.7 to 6.4, 5.9 to 14.4, 14.5 to 30.0 MC . It has a on/off switch labeled I.N.S. The band coils are in sliding cast case. I kind of recall seeing an NC-100, perhaps that's not the correct number. But I need to find a schematic. My guess is that the NC-100 didn't skip the bradcast band and had no LF.

I have an FAA Academy book on various vintage receivers. This book calls what you have the RCP. Its a National receiver made by someone else on contract. It does have the sliding coil rack, a la NC-100, covers the LF band, and the CONS switch. Its got a frequency card in the upper right center. Let me know if this might help.

I took a little closer look and the bottom of the pwr xfmr has "NC 100F" on it. It has a three section variable tuning cap that looks to be about 150 pf per section. It has 12 tubes, 5 6J7, 3 6K7, 2 6C5, 1 6V6, and 1 80. There is a small rf coil mounted on the rear apron of the chassis next to small compression variable tunig cap that has access from the back. One end of the coil is disconnected. It's a rack mouint and the case has handles on the back but I can't see how it was secured. I'm using 2 pieces of coat hanger wire to secure it till I find out what they used, possibly 2 long L shaped bolts.It has a little square on front to write down important frequencies

Source record: 21292

Hello,

I will be celebrating my 50th anniversary as a ham shortly. To commemorate the event I am trying to duplicate my original station which consisted of a Heathkit AT1, Heathkit VF1 and a Hallicrafter S-85.

So far I have managed to find a VF1 and the S-85. I am still in search of an AT1. Is there any chance anyone can help me and/or send me in the right direction?

I would certainly appreciate any help you can offer me.

Thanks and 73,

Bert W1DFU

>> Gotta wonder where all.
I remember them ending up all over the Long Island /NYC area
Canal Street, Edlie electronics, LNL. (Ed Lei closed shop about 4 years ago)
Before Lafayette closed they created whole rooms of clearance centers. I
remember buying motors, transformers, assorted parts 10 cents on the dollar.
I still have a working Dyna Com 6, Comstat 35 and SSB-140 someplace. I
remember they made these nice looking VOMs that constantly blew up when you
went above 120 volts (PC traces by the selector switch would ark)

-Joe

the parts and inventory went!

Hello group, can someone help me with a hallicrafters HT44 tx manual.
Places where I find it does not allow downloading. At least I need the
page showing pix of connecting rear of HT44 to SX 117, and if I may ask for
something more it should be the operating instructions. Of course a full
manual
would be appreciated (I have the schematic).Digicam pix or scanned ones
is OK.
Reason: last week I sold my HT44-SX117 station to a guy who lives far away
from me and who has little experience with tube radios, and he has problems.

Tnx in advance, 73 / Per / sm7aha

Morons like you, and diatribes like this, simply reinforce my commitment to our way of life.

Every now and then it becomes necessary for someone to stand up and make other accountable for their actions, or, lack thereof. We do that while most of the world sits back and watches. There are Alfa Countries and Beta Countries and I think we Americans can get along fine without the Beta Countries. They're weak, they have no resolve and they are not willing to step up. Have we and will be make mistakes? Sure, but, that happens because we are human and as such we are prone to making mistakes. However, is the world better off in the long run because we step up? Damn right they are. Start counting the interventions and therein lies your answer. And, to you, Mr. Coward who won't ID yourself, let me tell you one thing; you are likely safe and secure because of us. Is that arrogance on our part? No, that's being accountable, something you're not, and something most of the rest of the countries of the world aren't either. Go ahead and balk at the Saddam's of this world and see where it gets you.

5440. Wiring Connection Diagram for Kepco HB4AM Power Supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-11-14 18:27:36 UTC
From: Joe Curry <jjcurry@sbcglobal.net>
Message-ID: <ssNld.8772$zx1.5627@newssvr13.news.prodigy.com>
Source record: 21201

To the Boatanchor Crew:

I have just become the proud owner of a Kepco power supply that I want to use as a bench supply for my BA gear. It has vacuum tube voltage regulators (7581s).

The Model Number is HB4AM. There is a 14 terminal block on the rear of the unit with many screws missing . Something was once connected here, but what I can't tell. I don't have any information on what terminals should be jumpered together, just the output and the 117vac line input. I know there are internal links to the regulator, sense circuits, etc. I have tried the Kepco website, which is unusually good and has never failed me in the past, but they don't have any info on this model.

I would love to at least get a connection diagram and ideally an operating manual. I'm glad to pay copying and shipping costs. If any of you have such a beast in your possession, I'd surely appreciate the info.

Thanks and 73,

Joe
K3ICO

5441. FA: Harris RF-5020 HF Receiver/Exciter, many options

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-11-15 00:20:15 UTC
From: ElectronRon@The.KB
Message-ID: <fatfp0l97fl7o8dnrtg9hgnuapcjq07pm4@4ax.com>
Source record: 21202

Yes, Louise, there are still boat anchors but they are just getting
fancier and more expensive! :-D

Auction ends Nov-21-04 16:05:02 PST

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5732277740

A portion of the auction blurb follows:

Here is an example of the outstanding Harris RF-5020
HF Receiver-Exciter. The unit covers the entire HF
range of 1.6 to 30mHz in 10Hz steps when operating from
the front panel. 1Hz tuning steps are available
through the serial control interface. Power input
is 26.4 VDC nominal @ 3amps max. Power out is
100 milliwatts nominal across the range, suitable for
driving a wide range of military RF amplifiers,
including the matching Harris units, the Redifon
GA-481 (which I use), the AM-3007/URT (part of the URC-35),
The AM-3349/GRC-106, and the Technical Materiel Corp
GPT-1K and PAL-350 to name a few.

This radio has a digital I.F., with DSP processing employed
during both receive and transmit. Available modes and
selectable bandwidths associated with each mode are:

USB/LSB -- 1.5, 2.0, 2.4, 2.7, 3.0kHz
AME -- 3.0, 4.0, 5.0, 6.0kHz
CW -- 350Hz, 680Hz, 1.0kHz, 1.5kHz
Modem and Digital Voice -- 3.0kHz

The BFO function is variable +/- 4kHz in 10Hz steps
from the front panel or in 1Hz steps through the serial
interface.

AGC attack/hang/decay data is as follows for settings
other than "OFF":
FAST - 25msec/100msec/100msec
MEDIUM - 25msec/500msec/750msec
SLOW - 25msec/1500msec/1500msec
DATA - 25ms/0msec/16msec

This particular example has all options installed except
crypto:

RF-5110MD High-Speed Data Modem. In the high-rate
39-tone mode, a channel transmission rate of 3466bps is

achieved by time differential phase shift keying (TDPSK) of 39 tones which is combined with forward error correcting to produce data rates ranging from 75 to 2400bps. The modem is used during digital voice operation.

RF-5120AFC Harris ALE Automatic Link Establishment. Please note this is the Harris proprietary "Autolink" ALE system. It will work with other systems containing the same option but not with the MIL-STD-188-141 ALE most often encountered on the ham bands. The solution in that case is to set up PC-ALE on your PC. :-)

RF-5130LPC Digitized Voice. Uses the U.S. DoD LPC-10E (Version 52) 2400bps algorithm. During frequency hopping the data rate is reduced to 800bps resulting in a slight voice quality degradation.

RF-5140FH Frequency Hopping (ECCM). Programmable bands up to two mHz wide. There are three options: a dedicated hop set list of frequencies, narrow-band using one center frequency, or wide-band using a programmable frequency range. Operation occurs at 20 hops/second.

This unit passes the built-in-test (BITE), which checks operation of the basic radio as well as all installed options. The serial interface is operational, and I will include software I wrote in QuickBasic which allows control of basic radio functions via a PC. The radio has been further checked out on the air via SWLing and numerous ham contacts on 17, 20, 40, 60, and 80 meters. ECCM, digital voice, and Autolink functions have all been checked out on-air, or in side-by-side tests with another functional unit where on-air testing was not practical.

Also included is a copy of the User Guide, which is essential for learning the operation of this menu-driven unit.

--Mark

Joe,

Open it up and look to see what connects to the screw-terminals. You can trace the wiring back from the terminals and see where they come from - obviously, that will tell you what's on the screw terminals (voltages, inputs, outputs, etc., etc.). Even without a schematic you should be able to trace the thing without any difficulty. Should be a rather straight forward deductive inspection - unless I missed something in what you were trying to say. I would think all you'd have to do is power the thing up and measure to see what's at the terminals, if nothing else.

I have 30 NOS RCA 40673 mosfets for sale. These are going for $6.50 each on Dan`s small parts website and up to $12.00 each at other parts houses when you can find them. I am selling them at $3.50 each or $30.00 for ten of them. These are getting scarce as "Hen`s teeth"!! I also have Mini Circuits SBL-1 and SBL-1H-8 mixers. I have 15 of each of these and I am selling them for $2.50 a piece or 10 of them for $20.00. These are N.O.S. from 1995, but are new and unused. Thank`s, Rob WB8VWI

Hello All!

I have the following for sale:

HEATHKIT SB200 LINEAR AMPLIFIER. Very Good Condition- No dents or scratches.
Loaded 400 watts out into Cantenna dummy load.
Has manual. Pics available and will ship CON. US.
$325.00

3KW ANTENNA TUNER. MFJ989C with digital readout in Very good condition.
Small dent in chrome of tuning knob.
Has manual. Pics Available and will ship CON. US
$275.00

KENWOOD TH22A 2 meter HT. In excellent condition. Has leather case and 2
extra batteries. Original box and manual
Ac supply etc. Pics available and will ship CON. US
$75.00

SPEAKER-MIKE for above . Works GREAT! Pics available and will ship CON. US
$10.00

I have some SX-42 parts I need out of the way:

Working S-Meter, excellent condition:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5732254139

Dials, main dial cover, bandspread escutcheon, excellent condition:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5732255408

Front panel (needs refinishing):
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5732285376

Original cabinet (needs overspray / repaint):
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5732285520

I should also be listing a full knob set in the next couple of days.

Thanks.
Dave

5448. E. F. Johnson Rotary Inductor 226-3

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-11-16 00:04:50 UTC
From: Joe Leadfoot <josephleadfoot@dumb.net>
Message-ID: <41994422.4020504@dumb.net>
Source record: 21209

This unit is rated at 13.5 uh.

Does anyone have the per turn inductance for this unit? Approximately
2/3 of it is close wound, and one third is wide spaced.

Please send to plcooper@starband.net.

Thanks, Paul K6PY

I am looking for the female power plug fo this radio.

5450. FA: Harris RF-5020 HF Receiver/Exciter with options (relist)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-11-16 05:09:26 UTC
From: ElectronRon@The.KB
Message-ID: <t02jp0dpb5v9ol65lfv2a7i2lkn9qn66g1@4ax.com>
Source record: 21211

Relisted due to description changes.

Ends Nov-22-04 19:00:00 PST
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5732411616

Here is an example of the outstanding Harris RF-5020
HF Receiver-Exciter. The unit covers the entire HF
range of 1.6 to 30mHz in 10Hz steps when operating from
the front panel. 1Hz tuning steps are available
through the serial control interface. Power input
is 26.4 VDC nominal @ 3amps max. Power out is
100 milliwatts nominal across the range, suitable for
driving a wide range of military RF amplifiers,
including the matching Harris units, the Redifon
GA-481 (which I use), the AM-3007/URT (part of the URC-35),
The AM-3349/GRC-106, and the Technical Materiel Corp
GPT-1K and PAL-350 to name a few.

This radio has a digital I.F., with DSP processing employed
during both receive and transmit. Available modes and
selectable bandwidths associated with each mode are:

USB/LSB -- 1.5, 2.0, 2.4, 2.7, 3.0kHz
AME -- 3.0, 4.0, 5.0, 6.0kHz
CW -- 350Hz, 680Hz, 1.0kHz, 1.5kHz
Modem and Digital Voice -- 3.0kHz

The BFO function is variable +/- 4kHz in 10Hz steps
from the front panel or in 1Hz steps through the serial
interface.

AGC attack/hang/decay data is as follows for settings
other than "OFF":
FAST - 25msec/100msec/100msec
MEDIUM - 25msec/500msec/750msec
SLOW - 25msec/1500msec/1500msec
DATA - 25ms/0msec/16msec

This unit has the following options:

RF-5110MD High-Speed Data Modem. In the high-rate
39-tone mode, a channel transmission rate of 3466bps is
achieved by time differential phase shift keying (TDPSK)
of 39 tones which is combined with forward error correcting
to produce data rates ranging from 75 to 2400bps. The
modem is used during digital voice operation.

RF-5120AFC Harris ALE Automatic Link Establishment.
Please note this is the Harris proprietary "Autolink"
ALE system. It will work with other systems containing
the same option but not with the MIL-STD-188-141 ALE
most often encountered on the ham bands. The solution
in that case is to set up PC-ALE on your PC. :-)

RF-5130LPC Digitized Voice. Uses the U.S. DoD LPC-10E
(Version 52) 2400bps algorithm.

This unit passes the built-in-test (BITE), which checks
operation of the basic radio as well as all installed
options. The serial interface is operational, and I will
include software I wrote in QuickBasic which allows control
of basic radio functions via a PC. The radio has been
further checked out on the air via SWLing and numerous
ham contacts on 17, 20, 40, 60, and 80 meters. Digital
voice and Autolink functions have been checked out on-air,
or in side-by-side tests with another functional
unit where on-air testing was not practical.

Also included is a copy of the User Guide, which is
essential for learning the operation of this menu-driven unit.

From: ars_wa8mea@netzero.com
Message-ID: <9ae88a70.0411161153.1be0edcc@posting.google.com>
Source record: 21213

For Sale: Seco Model 78 tube tester. Works excellently! But my son and I are dropping out of the antique radio refurb hobby. (He's headed off to college...) The wooden case has been stripped and ready for your favorite coat of shellac or varnish. (I had planned on doing this myself before we got out of the hobby. I would have done it before selling, but felt maybe the purchaser would want to choose their own favorite finish instead.)

I have NO IDEA what these things are worth. And we don't do Ebay. But I will ask for the original selling price for this unit back in 1958, and you can calculate the 45 years of inflation that will signify the bargain you're receiving. ;-)

$48.50 and I will pay for shipping and insurance.

5454. New program - Coax Choke

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-11-16 23:07:43 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <cne17v$3el$1@hercules.btinternet.com>
Source record: 21215

```
New program SELFRES2.exe
-------------------------------------
Input data :

Length and diameter of solenoid.
Number of turns.
Conductor diameter
Length of line in which the coil is inserted.
Testing frequency.

Output data :

Coil self-capacitance.
Coil self-resonant frequency.
Choke impedance vs frequency.
Insertion loss of choke in dB.

Performance is based on a choke wound with coaxial cable of the same type as
the transmission transmission line in which it is inserted. Conductor
diameter is that of the coax outer. It behaves a single wire. Coax inner
diameter is of no consequence.

Choke insertion loss is a measure of the reduction in power radiated from
the feedline. But, despite the attention it attracts, actual power radiated
from the feedline WITH the choke will never be known because the power
radiated WITHOUT the choke is indeterminate.

SELFRES2 is 51 K-bytes. Download from website below in a few seconds. It is
not zipped-up and will run immediately.

HALLICRAFTERS SX-73 aka R-274D FOR TRADE!

I have a electrically restored, aligned & calibrated Hallicrafters SX-73,
aka R-274D. It was gone over
by Rick Mish at Miltronix, who is a world class communications receiver
restorer. The operating performance is exceptional. The signal meter will
deflect to full scale on the strongest signals.
Overall condition I would say is VG +.

What I am looking for in trade, or
partial trade, would involve
me acquiring one of the folowing "Sideband Converters". A TMC Technical
Materiel Corp. CV-1758, or a Kahn CV-1982/TSC-26, or a Kahn RSSB-62-1B, or
a Delta Electronics ISB-1.
The "boatanchor" I'd consider in trade for the SX-73 would be a later
Hammarlund SP-600, that utilizes "ceramic disk" capacitors, rather than the
"black bumblebee tubular capacitors".

Contact Dan Gutowski KD8AMS at: dg16ms26@nospammsn.com remove "nospam"

Practically nothing. Very few radio stations use cart machines nowadays, and those stations that do generally have little trouble in finding top-quality used machines such as Pacific Recorders and ITC. Even to a collector an AudiCord is not very desirable. In my 35 years as a radio engineer I have worked on, I believe, every brand of cart machine ever made in the US, and I consider AudiCord to be the worst brand that ever I have ever worked on. Their principle defects are underpowered motors, and materials and workmanship that are noticeably inferior to the premium brands. The only reasons why so many were sold are 1) a radio station used to need quite a few cart machines, and 2) AudiCords were relatively inexpensive, compared to other brands.

I am offering my Swan 500c which has been in the family a long long time. Works like new and looks super as you can see in the pictures. Uses a pair of 6LQ6's in the final and still puts out 290 watts key down. Rig comes with the matching power supply, Vox, noise blanker, Calibrator.
If you like to hear it, meet me on 40 CW or SSB....to hear tt and see no drift at all after a hour of warm up which is typical of these old tube rigs.

Here's some pictures to see:

FA: An E. F. Johnson Viking Kilowatt "Matchbox" - probably the King of all the HF antenna couplers that were ever made. It will probably handle 10 KW with ease. 1950's vintage, with the optional SWR meter/ remote coupler and the internal antenna relay (which has been bypassed for straight-through operation.) Tunes coax, balanced line and single-wire antennas.

This is the one that people used to "load up the bedsprings" with - yes, I tried that, just so I could say that I did it! I made a few out of state contacts with the "bedsprings" antenna, and also loaded up a few other things like an aluminum ladder, a window screen, a metal rain gutter, etc. What hams won't do for fun?! I guess I've spent too much time reading those Kurt N. Sterba antenna articles in _Worldradio_ magazine.

If you find one, I could use a decent (i.e not full of the typical TCS panel pitting corrossion lots of them have) front panel. I have an otherwise nice low S/N (18!) TCS-13 receiver that looks like it must have been installed for many years out in the open - badly pitted with salt spray crud.

Anyone have any success restoring these pitted panels?

I got a suggestion on the BA list to cover the pits with black magic marker...dont think thats going to work on mine!

From what I can tell from this thread, they must have sold off individual stores to various chains or individual stores depending on the locations. The local LRE here in Westerly, RI became one of small local chain of stores called Leiser Sound, owned by a Harry Leiser, in the early 80s.. The Leiser Sound chain went belly up a few years later. I think several other LREs also became Leisers in the SE CT/ RI area.

I remember getting a LRE SWR/Wattmeter for next to nothing there when Lieser was liqudating all the non-stereo LRE inventory.

Interesting topic/thread!!!

Hi folks,

Does anyone have the calibration instructions for a Simpson 260 6P that you will share with me?

I've found the 5 and 3 series (in the operators manual). I think I can use these if all else fails but would rather have the real McCoy.

BTW, I already have a DMM :)

Thanks in advance.

I'd say use the $9.95 DMM to "calibrate" the old Simpson. Its probably
more accurate than the instructions.

In practical terms - you need two fairly accurate meters (in addition to the 260).

Set the 260s mode switch to + and the range switch to 50V. Apply EXACTLY 250mv to the 50ua and COMMON/- jacks. On the 260 -- adjust R1 and R2 (they interact) until the 260's meter indicates EXACTLY full scale AND that the power supply is supplying EXACTLY 50ua to the 260.

As a cross check - once set - the resistance measured from the 50ua jack to the COMMON/- jack should now be EXACTLY 5000 ohms.

Once that is set - then set the mode switch to AC, move the input to the AC/DC+ and COMMON/- jacks; and set the range switch to 2.5V. Apply EXACTLY 2.5VRMS - and adjust R22 & R25 (they too interact) until you have full scale (on the 260's meter) AND exactly 200uaRMS current being drawn by the 260.

As a cross check - the resistance (switches unchanged) between the AC/+ jack and the COMMON/- jack should be 12500 ohms.

NOTE:(!!!!) Don't try and use a digital for this measurement - as the diode bridge in the 260 will not indicate linearly to the step/ramp of most digital meter's ohms circuit. Use your "other" 260 to check this ;>)

best regards...

Yeah, bonerbrain...try using REAL indicating meters for once! I still
use a Weston Model 1 from 1939 as a secondary voltage standard after
all these years, and IF you know how to read it, it's as accurate as
your favored DMM crap from Rat Shack. I also have a good selection of
less power hungry Westons that will indicate in the millivolt and
milliampere ranges, and when sent to the cal lab, they're ALWAYS on
the money. Just make sure the room's at 70ï¿½ when using, and the
dynamometer movement's perfectly level...but I would suppose a
smartass like you wouldn't KNOW about THAT, now, would you?

You need Prozac or some other antidepressant. In the mean, life's to

Hi Jack,

Do you mean the full alignment or just the front panel tuneup
when your getting on the air. I have been using a hx-1681 for
over 20 years and have both. The only problem is that I'm on
vacation right now and won't be home until Saturday. If you
can wait till then, I would be glad to send you the information.

Maybe someone else has it and can get it to you before then.

I think you already know my email address.

By the late 60s, Lafayette Radio was _franchising_. At least some stores.
Obviously, when the chain name 'went away', the stores were still operational.

Hi, Randy

Thanks very much for the Simpson calibration info.

I just tried a Fluke 75 DMM across my old Triplett 666HH
VOM (10 volt d.c. scale at 1,000 ohms/volt).
The Ohms function of the DMM caused the Triplett pointer
to barely move, indicating maybe 0.2V across 10K.
Therefore the Fluke "Ohms" function is really "low power" Ohms,
not enough to turn on the Germanium diodes
found in the half-bridge full-wave rectifier
of the VOM under calibration.

In short: You are right!

> Would you pse elaborate on this aspect, Randy? Just what are the parts
> of the range in question and how much inaccuracy can one expect out of
> the 260 readings? Is there any cure?

Sure - if you look at the AC circuit Simpson uses in the 260 series -
it's a bridge made up of two diodes and two resistors (in the 260 it's
D1 & D2 - R23 & R24). Most digital multimeters use a constant current
source feeding part under test in the ohms circuit - and measure the
resulting ramp over the sample period. The problem is - the diodes
don't appear to be a fixed resistance as the ramp voltage causes the
junction resistance to change - and not linearly at that - so that most
digital multimeters will see the AC circuit in a 260 as a much higher
resistance than it truly is. Simpson 260s are designed to have a system
resistance of 5k ohms per volt on AC ranges - so the lowest AC range
(which is 2.5V) will have (when calibrated) 12500 ohms. You can verify
this with a DC ohm meter (such as another 260) but not with a (at least
not most) digital meters.

And that's the cure - use a DC ohm meter - not a "dynamic" digital. As
far as basic accuracy - the 260 is as accurate on AC (when calibrated
and meeting specs) as most any similar meter... AC is Average responding
calibrated to read in RMS - at 3% accuracy full scale - up to 100cps -
though actually -- all AC ranges EXCEPT the 250V range are fairly flat
through audio (i.e. 20kHz).

best regards...

> --scott

Scott, do you mean setting the DMM to read d.c. current, and then
putting it between the 6V battery and the VOM under test
(set to a.c. volts), to indirectly confirm the 5,000 Ohms/Volt
characteristic of the VOM? The DMM set to mA is rated at
6mV/mA voltage drop, so its voltage drop can be neglected
compared to the 6V source.

73,
Ed

You might want to use a Hammarlund one. But if you can live with a
generic replacement, Cain Electronics in Norfolk, VA has a bunch.
And Antique Electronics Supply in Arizona often has some.

I picked up a lot of Manuals the other day and found a gold-mine
of older tube scope manuals. They range from the 502 to the 661.
Also some of the 5000 series scopes (50XX, 51XX, 54XX, etc),
and most all in-between. Let me know if you want to see the list.
They can be sent USPS Priority Mail, and are priced at $15 each,
if they fit in the Flat Rate Envelope else it's $5 extra for the heavy
ones.
Shipped CONUS only.
No Manual Merchants need apply.

Al Last <al.last@sbcglobal.net> wrote:
>Please email me direct if you have any.

JEDEC book says that's a Ge PNP, 50 mW, -32V BVce, -20 mA Ic max, 2 mA nominal. hFE of 70 typical, 2 mA Ic nominal. Ft is 700 kc typical. Ge is typically 41 dB (and if you believe that I have a bridge for you). Specified for military applications with a wider temperature range than usual.

I'd say you can sub a 2N324 or a 2N526 in there without any real change. These aren't specified for input or output capacitance so if this is part of a tuned circuit it may require some tinkering to make it happy with an equivalent.

If it's an audio circuit, I'd just drop in a generic Ge equivalent with a high enough dissipation and be done with it. Or even drop a silicon device in there and change the bias resistors.

I recently discovered boatanchors and am dying to get my hands on one of these behemoths. That said, I am not educated electrically. What model is fairly easy to restore with good parts availability? I am most interested in Hammarlund HQ series and Hallicrafter SX28. The SR600 looks great but seems a bit complex. The others seem to be mostly a matter of replacing caps and wire. Thanks for the input.
Phil C.

For ease of restoration and parts availability, get one of the better Heathkit receivers. The manuals will walk you through everything and help you easily identify parts. (Many caps and resistors darken and make it hard to read values.)

My favorite big receiver, though, is the HQ-110C (the "C" is the model with the clock). This was my novice receiver back 40 years ago.

Good luck on your project!

Wayne, KEï¿½BZ

Phil,
Good question. First, let me say that the SX-28, although entirely collectable and one of my absolute favorites, is a certifyable bear to re-cap, especially the straight SX-28. Given that you're a professed neophyte, you might want to hold off on that one unless it already been accomplished and is running OK. The Hammarlund HQ-140 and the 150 are excellent, yet fairly simple, receivers, very easy to work with and on, and are quite affordable. All parts are accessible and readily available, if necessary. The more modern HQ-145 and HQ-160 are also very fine. The SP-600 with disc caps is fine; the one with "black-beauties" requires (albeit at worst) the changeout of over 50 caps, some well hidden and requiring some disassembly of the receiver. Again, I'd recommend either the Hammarlund HQ-140 or the 150 as a starter.
Regarding Heath and other kits.. At the risk of offending some folks, I don't know of a decent general coverage kit receiver I'd care to own. I do have my original Heath AR-2 but its a poor receiver. The other crapshoot is who built it to begin with. Any kit, Heath or others, if built by a newby using their uncle's 300 watt American Beauty soldering log will (or may be) a disaster. You really need to have a look inside ANY kit unit to see the quality of construction. But.... this is my take on "several" years of doing all this. Make your own decision....
Regards Jeep/K3HVG

I am looking for TV and radio broadcasts of the JFK and RFK assassinations. I am particularly interested in audio recordings of such broadcasts made by amateurs.

If you personally tape-recorded or obtained -- or know of anyone else who tape-recorded or obtained -- any television or radio broadcasts concerning one or both of the two Kennedy assassinations in 1963 and 1968, please contact me.

Whether it's a network or local broadcast, whether the sound recording of that broadcast is of good quality or poor quality, whether it was recorded in a major market or in a minor market, I want to know about it.

I'm a collector, so if you have any of this or know about someone else who does... please email me or have them email me at:

bkj333@aol.com

Thanks!

Phil,

I cast a vote for the Hammarlund HQ-100 (general coverage) or HQ-110
(ham bander) for your first project. They don't have a lot of bells and
whistles, so the circuits are easy to troubleshoot. There's lots of room
to work in under the chassis. There are plenty of them around and
documentation is easy to find. And since they were all built in a
factory, you don't have to deal with possible mistakes made by a kit
builder.

Good luck & have fun.

73,
Joe K9LY

Hammarlunds are much easier to work on than Hallicrafters. The SX-28 might
eat your lunch if your a newbie. The SP-600 can be a bear in the RF deck if
your not experienced with that rig. I would go for any of the HQs. I like
Heath too but you could end up with someone elses basket case rig. I've seen
a lot of bad soldering and all around poor workmanship at times in those but
then again I've seen some excellent Heath rigs and when put together right
are real cool radios.

I am about to start work on a couple of Hallicrafters S-40B receivers; one to give my father as a Christmas gift and one to keep for my own use.

I am comfortable with sprucing up the electronics, as I have numerous resources to draw upon for the parts and info on what to do. However, I am stumped on where I might go to get decals to re-letter the front panel of the cabinet should I decide to repaint it (likely in both cases).

Where could I go to purchase a set of decals suitable for this Radio?

You have chosen wisely. Hammarlund never made a "cheap" receiver, meaning one without an RF stage and at least two IFs. Every HQ-series reciever is a good one, and the dial calibration in any Hammarlund is a joy to work with.

You'd best start with one of the simpler, newer models, like the HQ-100. That is, four bands, single conversion, not too many extra features. It will be a good radio to use. Later you can try the dual-conversion HQ-160, 170, 180. Like the other later models, these have ceramic disc caps that usually don't need replacement.

The HQ-129X is a fine radio for the lower bands, but probably will need lots of caps replaced, and resistors too. In the same class is the National NC-173.

The SX-28 is a real bear to recap. Start with something simpler, and easier to pick up and move around. And a bit newer, for better performance above 14 MHz.

Best of luck, Mike K. AA1UK

IMHO,
the HQ-100 and 110 are pretty sleepy radios compared to the upper end of
the Hammarlund scale but on the other hand are like Mike (and others)
indicate, far from a cheapo radio.
For a first time Hammarlund project I think this would be a good choice.
If the "collector pricing" gets in your way give a peek at National
NC-88/98 which can be had at a reasonable price.
And shoot, if you're on a tight budget the Hallicrafters S-40 is one of
the best bargains around and ain't that bad a radio for a firdt-timer.

All the Teddy tapes will show are him describing the gurgling sounds
that Mary Jo made while he was leaving her there to drown.
A freakin NBA player nowadays loses 4 million in salary for getting
excited about having beer thrown on him but an ole Party insider like
Teddy walks free for killing a girl because he was drunk.

Justice would be better served if she would have been able to throw a
beer on him.

5548. SX-62A Advice

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-11-24 20:57:02 UTC
From: Bill Powell <whp@att.net>
Message-ID: <drs9q0d2i0hot5djipbumbi63evj9elehe@4ax.com>
Source record: 21059

I just purchased an SX-62A and am looking for collective wisdom on the
following topics:
1 - Re-capping;
Is it necessary or recommended?
To what extent?
Any "problem children" hidden in inaccessable places?
Any "unobtanium" caps required?

2 - Dial cord re-stringing;
Do I need to grow extra fingers / hands?
Learn new and colorful language?
Dissassemble the silly thing so far as to wind up with a new source of
spare parts?

TIA,
Bill Powell

5549. Multi Elmac AF 67 Meter

I have a meter that looks like its from a Elmac AF-67. Its yellowed and scratched.. The metal on the cover is pitted. It's ugly. It works. No cracks in the case. I tested it and full scale was about .84 ma. It should be 1ma. The pointer is streight and the balance is ok. The scale looks good. It's good for parts if you have a nonworking meter. Scales are 0-5, 0-150, 0-750. Anybody need it? I'm thinking of putting it on eBay.

Yep, the black goo is tar and unless the choke is running WAY hot I'd
not bother awlfully much about replacing it. As far as PCBs in your
dinsaur not moch to worry about UNLESS caps were replaced any time
from the mid-50s to say the early 90s. My thoughts on units
containing PCBs , asbestos etc; are as follows: Unless there is an
obvious problem (PCBs leaking from caps or loose asbestos powder etc;
) leave the stuff alone. There are many MUCH more hazzardous
substances that we all are exposed to on a daily basis.

Just my thoughts.

Kevin (88LF owner for 27 years)

5551. National NC60 service info or service manual

Newsgroup: rec.radio.amateur.boatanchors

Al,

I do have 2N-404 Texas Instruments (NOS) transistors, which, in
according to my my transistor manual, can be used as direct
replacement for 2N591. I also have one transitor from International
Rectifier TR 05-C which is also can be used instead of 2N591.
You can contact me directly at: kb9olm@yahoo.com

> I just purchased an SX-62A and am looking for collective wisdom on the
> following topics:
> 1 - Re-capping;
> Is it necessary or recommended?

I would. Paper caps get leaky.

> To what extent?

Replace all the paper and "black beauties". The under chassis electrolytics are almost certainly dried out and should be replaced. The large aluminum can power supply elecrolytic is probably at least iffy. It's still fine on my SX-62 and the one on my parts chassis still tests good. Replace it if you can't confirm it as good with a full voltage leakage tester and an ESR meter or if you don't trust your luck.

I also installed fuses.

> Any "problem children" hidden in inaccessable places?

The ones underneath the bandswitch are a little hard to get to. Taking off the side skirt will help. You'll need a large soldering iron or gun to undo the soldered connections on the skirt.

The replacement caps are usually smaller, and are easier to work back in.

> Any "unobtanium" caps required?

No. But there are over 40 standard value paper caps to be replaced, if I recall correctly.

>
> 2 - Dial cord re-stringing;
> Do I need to grow extra fingers / hands?

The dial cord is straightforward, but it sure uses alot of cord.
Replacement is time consuming, but not tricky, if you disassemble the front section of the radio.

"Frank Dresser" <analogdial@worldnet.att.net> wrote in message
==========
Frank:

I believe the reason that the main filter capacitor survives so long in the SX-62 and SX-42 is its location. It is near the back of the chassis behind the tuning capacitor, well away from any tubes or other heat producers. Most sets put the filter can near the power transformer, rectifier and audio output tubes where it gets roasted.

Best Regards,

Ed

Note that naptha (paint thinner, NOT paint remover) will do a nice job
of removing leaked tar from chassis with a little elbow grease.

Antique Electronics Supply carries all of the twist-lock types that
exist today.

If they don't sell it, you can open up the old one, remove the guts,
solder some modern 105'C radial types in there and fill it up with RTV.
Looks absolutely original, but with much better specs and longevity.

Truth told, the HQ-140X, the 140-XA and '150 are generally the same receiver, except that the '150 has a Q-multiplier. If memory serves me correctly, the HQ-150 came with 2 types of cabinets; the old rack cabinet type and later a "new" wrap-around type. The '140 has a round S-meter, the '150 has a more typical Hammarlund plastic job. I have both these receivers and both are very nice to use and look at. Matching speakers a bit problematic, however. The do show up on Epay, albeit infrequently. Good choice, either one!

Try an old Astatic D-104. They're not too expensive for a nice one and they're entirely compatible, impedance-wise. An amplified version would be convenient in that you can adjust the gain.

I just powered on the receiver after a long sleep and it works fine on my 20 meter dipole antenna. Cosmetically it needs work, and it does not come with a case. Made by Stewart Warner, SN 549.
I live with one of these for years as a R29271, its a great receiver. I checked out many bands and listened to signals, the meters work as well. I checked the calibrate function and it works as well, and I played with the other features too. There is one female plug that someone put in, in the lower left hand corner and I do not know what it is for, so I leave it alone. I live in Central Ma and this would be local P/U only, but I am willing to travel a couple of hours though. I am asking $350 for the working receiver. My last sale of a SP-600 was to a fellow in RI who came up and checked out the receiver, and I have not heard from him since, this one is in the same condition.

I visited with Glenn and looked it over. It is BIG and it is bulky and it looked heavy. It also appeared like the rear of the cabinet might have been part of the ship's hull (almost kidding). It would be a good project for a competent rebuilder, but not for a newby. It's unique and it would be unfortunate to have it go somewhere as junk metal, but I have too many other projects to even think of one of this size.

For advice on recapping, see the article at
http://antiqueradio.org/recap.htm .

The SX-62 is similar to the SX-42. You may find the SX-42 restoration
article at http://antiqueradio.org/halli07.htm interesting.

This old dog has officially been put to sleep.
If anybody needs any parts, pse ask, otherwise they are going to the
landfill in a week's time.

Any parts are free for the asking and you pay shipping with the
following exceptions.
No vertical range selector knobs available.
I'll have to ask $10 for the good CRT. No, I don't know the number
because its written in HP jargon.
I have the original manual and I'll ask $15 for it.
The rest of the innards are in as-is condition. I'm scrapping the scope
due to a number of problems so I wouldn't count on good boards, etc.
other than for discrete components.
I'm selling the parts because trust me, its too far gone to be a
fixer-upper bargain as a complete unit.
Shipping via USPS only from 00765.

Inquire within,
Bill WX4A

No argument there. My widow will give him a good price on my HQ-180 someday :-)

But it's going to run him $300 and up, and if any major alignment work is needed, it can get pretty tricky. I think he wanted something cheap and simple, though we'd all like to see him graduate to a 180 later on. In its favor, the 180 is recent enough to use ceramic caps, not wax paper leakers.

For practical usage, the 180 beats the SP-600, and is easier to pick up.

For Sale:

Hallicrafters SX-117 receiver, HT-44 transmitter, and
PS-120/150 speaker/power supply. Gear is clean and in
stock condition. Receiver is working, has new filter
caps, and all tubes are good. I have never powered up
the transmitter or p/s. Manuals are included for all
three pieces. I believe the cabinets on the receiver
and transmitter have been repainted, but I can't recall
for sure (I'm at the office right now). Regardless,
they look presentable as-is. See photos here:

5609. FS: Heathkit SB-200 linear amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-11-29 17:28:50 UTC
From: k5dh@raytheon.com
Message-ID: <m%lqd.6$YX.2@dfw-service2.ext.ray.com>
Source record: 21122
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

For Sale:

Heathkit SB-200 linear amplifier, with original manual.
In good cosmetic condition, not perfect. Power supply
has been rebuilt using all new caps, diodes, and bleeder
resistors. Has a Standby/Operate switch added to the
front panel (same kind of switch as the On/Off switch,
almost looks like it came this way!). Amp works fine
on 80 through 15 meters, but doesn't work on 10 meters
(plate current is low, and it peaks instead of dipping;
no desire to troubleshoot it). The Loading cap is not
original, but it works. I have an original part that
I will include. Tubes are good, power output with 65
Watts drive is about 750 Watts PEP on 20m. I've owned
this amp for several years and it has worked great for
me (except on 10m, as noted above). I've upgraded to
an AL-80B, so this one must go.

Price $250 plus shipping from Dallas, Texas

See photo here:

Source record: 21120

I have a question about logging recorders that are used at police headquarters for example to record communications. I understand that they record the audio received by the receiver from the mobile unit and they also record the transmissions made by the dispatcher on the local mic. How exactly is the logger connected to the radio system. Where are these two audio sources combined? There is no single connection in a typical radio transiver to get both the transmit audio and the receive audio.

The reason I want this detail is to understand what happens when the dispatcher "talks over" one of the mobile units or a mobile units "talks over" the dispatcher. Is there any way that both audio signals can get recorded together? I understand in a typical 2 way radio transceiver, when it is transmitting, it cannot receive. But in a more complex system typically used for police communications that may involve multiple remote satellite voting receivers, are there any conditions where both the active Rx and the dispatchers mic audio might both get recorded on the logger together?

Does anyone know the details of how a logging recorder is typically connected to a complex communications system? Is the dispatcher mic sometimes always recorded even when the transmit button is not pressed?

thanks
Mark

Good enough. I'd say even my 160 looks a little nicer than the 180. For looks
(and plenty other reasons), you might want to make your next one an SP-600, or
even an earlier Super Pro.

Then there's a late model (I forget which) whose S meter is twice as big as
necessary -- see how you like it.

Though I think the best and meanest looking Hammer is the HQ-120, made just
before WW-II. But good luck finding one in original shape, not to mention the
original knobs. I've seen a couple, but not original.

5613. Advice needed on HQ-100

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-11-30 02:54:13 UTC
From: DesignGuy <dontbother@nowhere.com>
Message-ID: <phRqd.168003$HA.134274@attbi_s01>
Source record: 21124

I purchased a reconditioned Hammarlund HQ-100 a couple of years ago, and until recently was in pretty good alignment. However once when the dial light burned out I pulled the radio from it's cabinet and something underneath must have shorted against the cabinet (yes, I left it on -- bad idea).

Now the dial reads around 270 KHZ low on the 1.6-4 MHz band, and 610 KHz low on the 10-30 MHz band. The 4-10 MHz band dial calibration is spot on.

Also, there is weak signal strength on the 0.54 - 1.6 MHz band, but that was always the case with this receiver.

There is not enough play in the trimmers to compensate for the miscalibration, so something else must be wrong. I can only assume it's related to the shorting out of something when it was removed from the cabinet.

Does anyone have any ideas or advice on what could be causing this?

Many thanks

Hello:

I would like to make a comment - not to embarrass you but to prevent the same type of mistake made by others. It is a common mistake, because I have acquired a number of receivers that suffered the same fate.

The mistake is aligning the radio when some malady occurs. The radio, over a period of years may age slightly, requiring a minor adjustment. But, the alignment will not jump dramatically in a manner that would be corrected by re-alignment. A jump in frequency is an indication that something else is wrong. Instead of re-aligning the set, the problem must be located.

At this point, play like Sherlock Holmes. Use deductive reasoning. Test the radio on each band. Make notes of what the malfunction is and home in on the components which are common to the problem.

In the case at hand, a jump of frequency on two bands would not be alignment. It could only be a component which is in common between the malfunctioning bands. Since it happened suddenly, it would be a defective component (or possibly a short created by opening the cabinet).

Now, in addition to finding the original problem, you will need to realign the receiver, and each realignment can cause wear on those components. I once got an HQ-145 where every if core was cracked and most of the oscillator and rf section cores were damaged by using an improper instrument and some of those cores were cracked. I should have dumped the receiver but took it as a challenge and finaly got it restored.

Regarding the receiver, I believe the rf stage may be disconnected on the broadcast band to prevent overload, so it is not uncommon to have a deaf receiver.

73, Colin K7FM

I am sorry I was so harsh. Perhaps it is because I am working on my helicopter rating and any minor mistake can kill you.

I have absolutely no idea how loggers work in a police environment, but years ago the broadcast station I worked at had a stereo (2 channel) logger.Seems to be it would be a simple matter to feed the transmit signal to one channel and the receive signal to the other.

Otherwise, it would be a fairly simple matter to split the dispatcher microphone signal. Take one side of the split and feed it to a 2 input mixer. Split the receiver output and feed one side of the split to the other input. Take the output and run it into the logger. In a real world environment things would be a bit more complicated as you would probably want to do some signal processing, such as audio AGC, before recording.

Hi:

There is nothing magic about a stock coil. It simply provides inductance. You can make your own and adjust it until the range is correct. No more difficult than putting your shoes on.

You do not even need a formula. Just put more wire on than the higher band and less wire than the lower. Adjust the turns until the output is what it is supposed to be. On the broadcast band you can even listen to your $2.99 radio and calibrate against local broadcast stations. I recall doing that when I was about 10 years old.

Not harsh at all.... I did inspect visually before aligning but should have starting checking each component in common as you say. Perhaps a cap failed somewhere. Also, the mediumwave band is not dead but just weaker than it should be. That's a seperate issue however, as it was that way before I screwed up the rig.

Thanks for your advice. Time to pull the schematic out again and take another look.

Jerry,

thanks, I understand what you are saying that it CAN be done that way.

My question is what IS typically done?

Thelogger in question is a mono unit.

Mark

In some applications, there is a seperate receiver used for the logging
recorder, which just records everything that goes over the air. The aviation
guys normally do this, because they use AM which allows everyone to talk
over one another without any capture effect. So you may have the control
tower stepping over someone, and you want to be able to record that, so you
use a seperate receiver from the main comm system altogether.

The local police probably do not do this, since it is fairly expensive and
the police, I am sorry to say, have tended to get the cheapest comm systems
they possibly can.

Source record: 21141
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

FS: An Ameritron Amplifier Interface Relay Buffer unit, model # ARB-702K. It is a linear amplifier keying circuit interface unit to go between an HF transceiver and an older linear amplifier, such as Heathkit SB-200/220 series, Collins 30L1/30S1, Swan, Henry amplifiers, etc. that have a keying relay that has up to 200 volts on the amplifier keying line. Most modern HF transceivers are only capable of keying linear amplifiers that have a keying voltage of no more than 30 to 50 volts maximum. If you try to key one of these older linear amplifiers directly with your later model Icom, Kenwood, Yaesu, etc. transceiver, you will probably weld the T/R relay contacts together. This unit lowers the voltage and current that the radio has to key to a very low, safe value. It has a handshaking line that can be used with QSK (full break-in) transceivers, and an input for ALC. This ARB-702 is currently wired up with a DIN plug that is setup for use with most Kenwood HF transceivers - it had been used with a Kenwood TS-450S/AT and a Heathkit SB-220 Amplifier. Jumpers can be moved on the internal circuit board so that it can be used with other HF transceivers. $25 plus postage.

I am trying to identify a boatanchor AM transmitter.
It is a floorstanding unit, about 4 feet high
and three feet wide. It is about the size of a
BC-610.

The front is divided into three parts.
On the left and right sides are doors which
swing open revealing the bottom of tube sockets.
In the center of the front are the controls.

In the back of the cabinet is one big swing-open
door which gives access to horizontally mounted
tubes, the tops of which point toward the
back door, and large transformers.

It was black, crinkle finish. I don't remember
much about the meters and controls. I just saw it
for a few minutes. It was very heavy, probably
around 400 lbs.

LOL - this is more what I think of when reading many "it's an 8 out of 10" descriptions...

But it does make me wonder what it would take to put together a picture grading scale. Pictures of 10 radios of the same model in condition 1 to 10 so that those grading and those trying to use the grades would have something in common to compare to.

but then I guess that would be just about as subjective as words to some folks... "sure this one has more rust - but it's not as bad a place".

never mind

You just don't understand....ANYTHING that is missing or worn off makes the item less expensive to ship, and that is a good thing. That is why I always remove the mouse nest as a favor to the buyer, so he doesn't pay for shipping the extra weight. But the buyer REALLY gets his money's worth when I remove the heavy stuff; power transformer, speaker, cabinet. Then I can ship a perfectly good unit for almost nothing.....

You'd think more people would understand and appreciate this......

All:

I gave the picture scale some thought but, unfortunately, a pictured rating scale would only show how it LOOKS, not how it works.

However, pictures would help, in many cases, where meanings are subjective. For example, to show what is meant by "significant rust" as apposed to "some rust." Working on this feature now.

Cheers,

I still have FS a fair amount of NOS 2 piece porcelain feedthrough insulators. These are excellent quality and great for HV power supplies, antenna tuners, component mounting, and balanced line window plates etc. I have photo and happy notes from the guys that already bought some. Selling 24 insulators for $30 priority shipped.Priority shipping costs almost $10 so this is a good deal if you need them. tnx-73s Lew KlNDV

Of course! I ALWAYS pull the power transformer out of 390's when
shipping - I just don't understand why people get so excited when they
discover it missing -

I mean - I really did intend to send it along separately - I guess I
just got busy and forgot!

Sounds like its breaking into oscillation. Can't really say why but if
its been sitting around for a long time maybe a good cleaning/tightening
around the output circuitry would help.

What about "WORKS GOOD BUT ALL TUBES MISSING" and "CRISPY MINT UNTESTED?"

Strictly speaking "RARE!!!!" is not a condition code, nor is "JUST LIKE NEVE!!!"
but they are unfortunately used in place of conditions.

Also of course is the "EMBEDDED IN TOBACCO RESIDUE."

I think my Hammarlund PRO-310 is the coolest radio to look at. It is my dream receiver. If I had a choice of one radio on my desk, it would be that. Other receivers perform better, but it is one cool looking radio.

Problem is I have never decided on a really cool AM transmitter to go with it. So much good equipment, but I need one that makes my heart beat faster. Sure Rangers sound great and Globe Kings are loud - but nothing matches the PRO-310.

But, the search goes on.

Upon reflection and other posts, I realize that I left out tobacco and tar resins.

Some people consider that a negative - but I have never seen a chassis covered in tar which is rusty. So, the tobacco resins must serve as a rust preventative.

Therefore, those using my suggested rating system should add a "+" sign to the numerical rating to indicate an ehancement.

Hi, Bob

It's not wise to operate the 30L-1 at minimal loading
(loading capacitor maxed) - you will run excessive grid current.
Tune up with a small amount amount of drive, using the tune meter,
per the manual. Then, run a reduced amount of drive if you want to keep
the power low.

I was there when a friend tried running his new
30L-1 on RTTY, by keeping the loading capacitor maxed.
After a few minutes, we smelled something burning. (I think
it was the 2W grid resistor R-28 overheating).
It spooked him about the 30L-1.
He later sold it (to me) and bought a Henry 3K.

Some 811A tubes are not suited for operation in horizontal mounting.
The plane of the filament structure should line up with the two
thick pins of the tube base for the tube to be OK in horizontal operation.

73,
Ed Knobloch

Tapecasters were simple and relatively crude, but held their alignment pretty well, whereas Audicords were prone to get out of alignment and were badly underpowered. I'll take a Tapecaster over an Audicord any day.

I have one client that still has one Tapecaster and one Spotmaster in their MCR, for a one-hour live weekday show where the jock has a lot of old music on carts. Another station would like to contract with me, but until they get rid of the Audicords in their MCR I'm not interested.

BTW, cart machine maintenance had nothing to do with holding a First Class Radiotelephone Operator License. Large stations had studio engineers to keep the cart machines running, and First Phones to keep the transmitters running.

Hey, I know you were joking, but seriously, if a cabinet is worn and scratched
and the knobs are a little scruffy, it DOES mean that you don't have to be
quite as fastidious about protecting these surfaces when you pack it for
shipping.

Sure, you still need to protect against shocks and forklift tines coming thru
the carton, but you aren't as worried that friction will scuff off some of the
near-mint lustre of the cabinet finish.

Though I always wrap the item in some kind of clear plastic. Keeps the peanust
out too. --73, Mike K. AA1UK

How would you describe... I kept it all this time and paid for a storage area to keep it semi dry and dusty between trying to sell it at hamfests. I had a friend once in the Midwest who did this for years and not only "lost" money on boatanchors but got a rep for having the best junk people could wait him out to put on sale.

I like the scale. Is NIB a 10 or a 9? Guess it matters if the factory wrap and seals are broken or if it was taken out to "test" 5 years ago.

I think a ten-step scale is asking for subjective,
indecisive opinions and will spawn arguments.
What, really, is the difference
between "AS NEW" and "EXCELLENT?"

There are a lot of smart people here;
perhaps we can create a six-step scale
with solidly-defined benchmarks that
make the difference between
"Excellent" and "Good" easy to understand.
We just need to chew on it a bit.
One way to make fewer steps but with better
definition is to make it "dual-scale"
with specifing phrase, spliting the five steps
into two scales, one for working equipment and one
for non-working equipment.

For instance:
An R-390 in average surplus condition working fine:
Condition "GOOD/WORKING"
The vast majority of gear would fit here.

An R-390 in average surplus condition,
working except for the top band:
Condition "GOOD/WORKING less top band"

A KWM-1 without a scratch that has been in storage
for twenty years- you don't want to recap it and
don't want to turn it on for fear of frying things:
Condition "EXCELLENT/NOT WORKING untested due to long storage"

A Hallicrafters S-38 with rusty chassis, scratched-up face
and only buzzes with that "roasty smell:"
Condition "POOR/NOT WORKING"

If a person is interested, he'll write for details.

That would give us two scales, something like this:

1. NEW IN BOX/SEALED or /UNSEALED
2. EXCELLENT/WORKING or /NOT WORKING
3. GOOD/WORKING or /NOT WORKING
4. FAIR/WORKING or /NOT WORKING
5. POOR/WORKING or /NOT WORKING
6. PARTER (not working by definition)

plus a specifying phrase if needed.
With a little head-scratching, we can
develop benchmarks for these that will take
most of the guess-work and opinion out of it.

Just MHO,
73 Dave AB5S

Alignment? I didn't know you aligned cart machines! I thought you just
shook the cartridge back and forth until the high end came back.

Okay, that was kind of sarcastic. But honestly, azimuth alignment on
a machine that can't keep azimuth is something of an adventure.

High end cart machines are such a glut on the market right now that you
might consider a contract in which you replace their whole cart arrays
for a nominal price upon taking over. Put an ad in Radio World asking for
cart machines and your phone will ring off the hook.

Several people have suggested we stick with the
Collins Collector's scale (which applies to any radios)
which is well-established, respected and defines conditions
in solid terms. This sounds like a good idea to me.
The scale can be found at:

http://www.collinsradio.org/html/cca_grading.html

5662. FA: Heathkit, Siltronix, ARC-5, Eimac etc.

I am preparing to help the widow of an SK ham liquidate his equpment and parts inventory. Lots of 60-70's stuff (CE 600L, 100V, and similar vintage, including test equipment). Probably will go eBay route. Where is a good source of pricing info to help set the "reserve price"?

Hans,

Go to http://www.aade.com/hampedia/prices2.htm
It gives the ebay low, high, and average price for a long list of vintage gear.
It isn't completely up to date, but as far as I know it's far better than
anything else.

Good luck in getting the widow the prices she deserves. You're doing a good
thing--in my grandparents' neighborhood they'd call it a mitzvah.

Don't worry about the "reserve" price. Take good, clear pictures.
Describe the equipment. Don't bother explaining the history of
Central Electronics or the specs for the 100V. Any serious bidder
already knows the full story. Describe the condition of the radio.
If you can put it on the air and take a picture of the SSB envelope,
show that. If you can take voltage readings, list those. If
it's a non-smoker's radio, say so. If you have the original manuals
or -gasp- shipping box, say so. Show the under chassis wiring.
Have good sharp closeups of the meter, calibration, knobs, front
panel.

If you have a positive feedback number, that'll help. If K0HB
will stand behind the description, that says a lot.

Describe how you will ship the radio, tubes pulled and separately
wrapped. Foamed in place if possible. Double boxed with 4 inches
between the inner and outer box. Front panel well protected.
Remember buyer pays for shipping but don't gig them. Get some

substantial shipping boxes, lots of tape and styrofoam, pack it so that it'll survive a 6 foot drop on concrete. $20 for materials seems fair but REALLY pack it.

Put the 100 V on the block, starting bid ONE DOLLAR. NO RESERVE, NO ZERO Feedback bidders, and stand back.

Same with the 600L, ONE DOLLAR, NO RESERVE. Proof of license required. That's how you'll get the highest honest bid.

No one is going to "steal" a good 600L or 100V. Don't worry about that. A KWS1 RF deck, no power supply, just went for thousands. There are a lot more 75A-4's and R-390's than good SSB transmitters of that vintage.

Yes, I agree with Avery, you are doing a good deed.

Do your own research by accessing "completed" auctions of the same unit.

You'll find out real quick what something is worth. Most old estate junk isn't worth all that much, anyway. Test equipment is a dime a dozen on ebay and goes cheap.

I'm busy culling my tube collection right now. Am in the process of throwing away a full 40-gallon garbage bag full of worth less tubes you couldn't get a nickle for on ebay or anywhere. Most with 3, 5, 8 volt filaments, TV-type tubes.

You really feel like shipping a 100V? I don't think I could even lift one anymore, let alone bother packing one to survive UPS!

Good luck!

5669. Packing A Boatanchor For Shipping

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-03 05:13:57 UTC
From: Bill Powell <whp@att.net>
Message-ID: <2osvq0l1cer40p3kiepjehahr2gmo0gmna@4ax.com>
Source record: 21030

To-date, I have found VERY FEW (eBay) people who have the FOGGIEST idea of how to properly pack a boatanchor. Especially the "trust me - I'm an eBay professional" types.
So... I've been insisting on (and paying for) double boxing and heavy cardboard boxes.
However. . . The "Joe Average" average double-box job can (usually) lead to a crunched front panel - or worse.
A Knight transmitter I recently received was double-boxed with the inner cushioned from the outer with a 1.5" layer of peanuts. However, the front-panel of the transmitter had been stood off the side of the inner box with a thick sheet of solid, hard styrofoam.
Right now I'm assuming that the "locked" shafts are simply due to the knobs being scrunched just a little bit tighter against the front panel than they should be.
I hope.

OTOH, a Johnson Viking Valiant (just add chain - no concrete required) I received was so well packed that despite being dropped, the only things amiss were a "floating" audio interstage under the chassis and severely bent mountings on the mod transformer: absolutely NO front panel damage or tube breakage!

My quest for knowledge:
Has anyone here tried DIY foam-in-place?
I'm talking about embalming the hunk-o-iron in double heavy duty trashbags, shooting "some" (think of a kid with a can of whipped cream) of the DIY spray-in foam insulation into the 4 corners of the inner box and then setting the bagged anchor into the mess till it sets. A follow-up would (hopefully) lock the bagged goodie more-or-less into the middle of the box.
Or am I just gonna make a nasty mess?

TIA,
Bill - WB1GOT

Oh - getting the thing back out is someone elses problem. :-)

Bill, I have 2 (or what's left of them) Valiant I's shipped to me via common carrier. Neither made the trip. The 2 V-1's that I do have and that are on the air came from local buys. Of all the equipment I've bought and sold, I have to say that Valiant's appear to be the most vulnerable. I've had front panels folded back, VFO drives crunched, all manner of iron torn loose, ad nausium. Of course, one of these disasters was preciptiated by a "gentleman from the South" using old boat cushions as packing (sic) material. EFJ crated factory wired Valiants for shipment. Probably still a good idea....?

TenTec used to, or maybe still does, use the foam method. But as I remember it, they filled the box just halfway, then set the plastic wrapped rigs in the foam, covered it and the lower foam layer and upper sides of the box with plastic film, and poured in the top foam layer. Opened like a clam shell, easy to get out.

I used the original box several times for moving the rig, and I know that the fellow I finally sold it to used it the same way. I copied the technique several times on a smaller scale for shipping fragile stuff.

Scott -

I don't like working on cart machines, never have liked it, never will like it. I won't contract with any station that still uses them as their primary short-form medium. I don't need their business - the signals I contract now have me working about 20 hours per week, on the average, and frankly I don't feel like working more than that.

MANY sellers - state they know "nothing" about the stuff which doesn't help OR start out with some asinine starting price trying to get rich off the damned thing - something they know nothing about! They could be selling a piece of shit and not know it. They think people are dumb enough to bid. Well, some are! But - most aren't. Not serious buyers anyway.

Spelling is another. Some may do it to be cute. To me it is a turn off. It shows stupidity, not cute. ESPECIALLY when they mistype the name of the item and it is in front of them staring them in the face, given they've taken a picture of it. EDIT the damned ad.... If they can't spell, they should use some program with a spell checker to make the ad, then upload it.

BE HONEST like the other gentleman said..... You'll do well. I too think you're doing a wonderful service. There are some, I know of one in particular who offers his service and gives the sellers (owners) pennies on the dollar then sells it for as much as he can get, sometimes a good deal - given the prices of some boat anchors, and he lies through his teeth to the original sellers and then to the buyers. I know - I've heard of him and seen him in action! I hope you're not following his lead. This poor ole lady needs the help of a trusted friend, not some prick - she's in enough pain already. I've often thought of making a nominal price sheet for my stuff, I sure wouldn't want my Service Monitor or whatever to be taken for little cash, when my relatives could have gotten more. Yes, age, working and condition will play into it, but I'll advise them to check other prices "before" selling.

I've sold a good bit on E-Bay - and carry a 100% positive feed back. IF it is junk - good for parts, I say so. If it is good, I describe it to the best of my ability. I've sold "some" items as "parts only" - with happy buyers. I've sold much more good stuff with happy buyers. HONESTY is what is important. They may come back to deal with you in the future for other things OR refer others to you. E-Bay can be a good friend if used properly.

"[S]everely bent mountings on the mod transformer" would raise my ire
somewhat.

> My quest for knowledge:
> Has anyone here tried DIY foam-in-place?

> Or am I just gonna make a nasty mess?

FIRST, and * I M P O R T A N T *

Cut sections of mailing tube (appropriate diameter) to
go over each knob, so that the front panel bears the
load, not the knob and the 'spensive stuff attached to
it.

SECOND, and JUST AS IMPORTANT

Cut sections of mailing tube (appropriate diameter) to
go over the connectors and other projections on the back
(and sides, and top, and bottom), so that the panels bear
the load, not the 'spensive stuff sticking out. Use mailing
tube sections to brace transformers and other heavy items
on the inside where possible. Consider taping tube shields
and other items which might come loose.

THIRD,

Put the rig in a tri-wall box and then foam that
sucker using the foam-in-bags stuff that I've seen
a few times now. Get another tri-wall box that'll
hold the first one with room for 1" or 1.5" sheets
of resilient foam between the inside and outside
boxes on all sides.

FOURTH,

Use solid sheets of resilient foam between the
inner and outer boxes. Don't use peanuts or other
small pieces of crushable material, as they'll
shift and leave some parts of the gap between
boxes unprotected. The inner box should fit
exactly inside the outer box and foam sheets.
Use additional sheets of foam to fill in any gaps.

FIFTH,

Securely tape all joints and flaps on the inner
and outer boxes. Consider making a wood frame
around the outer box.

Yes, it's overkill. I figure that overkill when shipping boatanchors
is just about right.

Well, you're the exception.
You priced packing material lately?
And please, guys- don't start with "the stores give it away,"
cuz it ain't so around here. You can get arrested for
retrieving boxes from the dumpster. I've asked several stores
and they quote "liability concerns." Wal-Mart will still give
you boxes, but they don't usually have good sizes or
strong-walled boxes. If you want *good, sturdy* boxes,
you still have to buy them and they aren't cheap.

I get tired of whines about packing fees.
I don't have a problem with packing well;
I *DO* have a problem getting people to
accept the fact that packing an ART-13 transmitter
or a DX-100 can easily cost $12-$14 or more.
And if you try to double-box a biggie,
you can easily box yourself right out of
USPS or UPS. Truck or bus is risky, expensive
and a show-stopper for most buyers.

Nothing is free, and that includes packing.
I add a piddling $1-$2 to my auctions to help defer
the packing costs (that's about a third to a half of
what it actually costs me),
and people still whine and complain about it.

Not many people will happily agree to the $35 worth of "overkill"
you just defined. Sounds stupid to balk at $35 to protect
a $300 radio, but you'd be surprised how many people
do just that.

Guys,

I've received my share of broken radios due to poor packing. In one case, I bought a pair of scarce Canadian-market-only 1960s Hallicrafters mobile CB radios from a fellow in VE7. He put the two radios into a box with NO packing materials, taped it shut, and UPS'ed it to me! Needless to say, both radios were damaged beyond salvage. There was no electrical damage, but ALL of the knobs and switches were broken, the plastic front panels were broken, the steel cabinets were dented, and the mic heads were cracked. My nice SX-101A arrived with the glass smashed because the seller packed it in stiff styrofoam that had absolutely no shock absorbency. Same thing with an S-107; the glass dial was shattered. I eventually repaired both of those receivers, but it never should have been necessary. I've gotten lucky with a lot of gear, but obviously not all the time. It's a crap shoot at best. Shipping companies have no respect.

But wait... all is no lost!

I have a suggestion for shipping large and/or heavy BA gear: ship it by motor freight! This is nothing new, but so many of our ham brethren don't even think of it.

Get out the Yellow Pages and call around to determine the best cost and shipping times. Pack the gear carefully in a sturdy cardboard box with plenty of shock-absorbent material all the way around, take the box to the trucking company and have them strap it to a wooden pallet for shipment. Do make sure the box is centered on the pallet.

With the box centered on a pallet, no other packages will get bashed into yours, no humans will pick up your package and toss it onto a conveyor belt, into a truck, or onto a plane, and if you specify that no other pallets may be stacked on top of yours, it can't get crushed from above. No damage!

This method will be rather costly, but the alternative is the risk of having an irreplaceable piece of equipment damaged or destroyed. No matter how well you THINK your equipment is packed, if you ship via a normal shipper, there is still a high probability that it'll be damaged in transit. How much is that gear worth to you? Are you willing to risk it?

At work, we have completely stopped using FedEx, UPS, DHL, and the other overnight shippers to transport our electronic equipment because they were damaging 75% of our shipments. Sure, they always pay the insurance claim, but in the mean time, the production line is stopped until we the equipment is repaired (which can't be done until the insurance claim is paid!). Since we changed to motor freight shipment, we have had ZERO damage! The extra cost is worth it.

I bought a SP-600JX-17 several years ago, the fellow shipped it from Michigan in a box that just fit it. Out 4 sheets of newspaper on the bottom, same on top and sealed it with tape.

Someone was looking over this dufus, 'cause it arrived unscathed. It was a 23XXX serial no. JX-17 with ceramic disc caps and was beautiful.

The luck of the Irish or something prevailed on that one.

I received an old HRO from some jerk in VE land (nothing against VE's) that packed my receiver inside a flimsy cardboard toilet paper carton with empty, capped juice bottles between the rig and the box (Welch's Grape I believe). They had mold inside from the residual juice which had remained when emptied. Let me tell you - that box stunk terribly. Some of the caps were loose and the bottles were not air tight. Naturally, the main tuning knob had been bashed into the front panel when all the juice bottles had shifted during shipment. It was a mess. If I could have gotten my hands on that fellow it would not have been nice.

QTY DESCRIPTION

1 60 FT ROHN 25g TOWER w/pointed top section
1 ROHN 25g BASE PLATE
1 ROHN 25g, HB25CS, HOUSE BRAKET
1 Icom 551 6m all mode transceiver (works)
1 Icom 211 2m all mode transceiver (works)
1 Heathkit SB200 Amplifier (220v)
1 Ham M Rotator (cked by Norm)
1 Tail-twister Rotator (cked by Norm)
1 Cushcraft R7000 Vertical (40-6)
1 Cushcraft 80m kit for R7000 (never assembled)
1 LJE GP1, RADIAL PLATE FOR 2" MAST, 24 RADIALS
1 Minkota, mdl: 765 MX, 12v remote trolling Motor
(needs new prop)
1 18" Golden Rule for tournament fishing
1pr Replacement 8" Steel Wheels w/rubber tires each wheel will
support up to 60lbs, good for hand truck, etc,
3ea ADULT MDL: KA1, KAPOK BUOYANT VEST, (never in
water), LIFE JACKETS.
1 Micronta FS/SWR Meter
1 B&W Dipole Connector [V shape]
1 Bag of various (approximately 10) Xtals, FT243
variety, HAM band frequencies.
1 3/8x24, Spring mount with 2 springs,
11ea Aluminum panels of sorts, 6"x12"x1/8"
3ea Packages of NICE-DUCT, brown color, 3/8"Hx5/8"Wx60"L,
each package has 5 pc totaling 25 feet.
1 12v WHINCH
2ea 50FT ROLLS OF RG6, 75 OHM COAX WITH "F"
CONNECTORS
1 25FT ROLL OF RG6, 75 OHM WITH CONNECTORS
1 CUSHCRAFT BASE RING FOR 10M RINGO
1 SHAKESPEAR FIBERGLASS, 144-174Mhz ANT (MOUNTS
ON AUT0 OR TRK)
1 QUADSTAR 2M HALO
1 Motorola, MITREK, MDL: T81JJA4900BK, WITH CONTROL &
POWER CABLE - NO CONTROL BOX, NO MIC OR BOOK
(AS IS NOT TESTED)
1 Radio Shack, 8", Antenna Mast Wall Mounting BKT
1 Motorola, MICOR, mdl: 02033a, WITH BOTH CONTROL
CABLE & CONTROL HEAD AND POWER CORD (NO MIC OR
BOOK) (AS IS NOT TESTED)
1 AMPEX 8" REEL TO REEL TAPE RECORDER

1 INTERMATIC TIME CLOCK, 110v
1 SCHUMACHER 10/30/50, BATTERY CHARGER, 12v
1 CROUSE-HINDS 3 LAMP, (RED/YELLOW/GREEN), TRAFFIC
SIGNAL - ANTIQUE - WORKS GREAT!
1 AIPHONE AH108, 10W, 8 OHM, HORN SPKR.
43ea INNOVATIVE SIMPLICITY, MDL: CREST, 2-JACK WALL
PLATES WITH THE JACKS FOR TELCO
2ea SMALL PEDESTAL CAMERA MOUNTS
8ea GARDEN HOSE WALL BRACKETS

If you are interested in any of these items, please send me an email with your offer. If I think it is reasonable, we will do business. If not then I will tell you.

I am in Montgomery County, Maryland, and would perfer not to have to ship, but if I do - please figure postage from 20895.

Hi Guys,
I have a bunch of industrial type tubes I am now posting on eBay...which I
have been hoarding for years! Many are new in the box.
heres a link to a pair of Amperex 6159's new in the box

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&rd=1&item=5735221127&ssPageName=STRK:MESE:IT

here is the whole list:

http://search.ebay.com/_W0QQgotopageZ1QQsassZoldradiopartsQQsorecordsperpageZ50QQsosortord
erZ1QQsosortpropertyZ1

thanks! I will be posting more this weekend, so watch for the next batch.
I also have a lot of minature industrial types, mostly 5600-5900 type
range...
email me if you are seeking anything specific, happy to make some good deals
on those and save the time of posting them!

thanks,
Mark Oppat
Detroit area

Not even close, Paul, there are many other can electrolytic types AES doesnt have that are made specifically for the specialty market like jukeboxes, etc. Granted, they are more or less custom units, but still they are out there.

I am helping a nursing-home-bound elderly ham sell off his equipment. Some of it is old equipment of "collector" status which I have no idea of the value. Trying to find out a proper starting price for eBay auction, I asked on a QTH.NET reflector of that brand for estimates of the reasonable value, but did not ask for bids.

Got several private responses, one of which was a bid for one of the items. The bid to me seems more than fair and we'd be happy to sell the item at that price, but I feel uncomfortable that others didn't get a chance to bid. At the same time, I don't want to look like we're trying to raise the price of the item.

Would it be ethical for us to tell the group that we have a bid for the item (not revealing the amount of the bid) and ask others who wish to send private bids also? If we do that, should we give the original bidder a chance to match any higher bid?

How can we be fair here, without starting a food-fight and looking like we're trying to "milk it for all it's worth"?

Thanks for your thoughts.

Forget all that pricing-game crap. Take the money and run....the poor guy
will be in the ground by the time you and others are done bickering about
pricing, ebay, sell history, blah, blah.

Whatever extra money you get, and for all your efforts to get it....remember
that the Nursing Home will get most of the $$$ in the end.

There's nothing wrong with getting top dollar because if you don't and the
buyer gets too good a deal, he'll just sell it and make profit that you
should have made. If you have the time take and need the money take the
time and you'll see what's fair. Very few will pay too much ...You can
always get bottom dollar if you rush.
good luck
Hank WD5JFR
PS I'd like to see what you have for sale, please email me the list.

As long as no auction was initiated, you have every right to entertain
any offer that you feel is reasonable and acceptable. Once the items
have been placed on auction, you are obligated to let the auction run
its course.

I have for sale a Tempo 2020 HF Transceiver. This transceiver was made by Uniden in the late 70s. It is all solid state except the 12BY7A driver and two 6146s in the final. This one looks new. It obviously has not had much use. The receive function works great, but I can't get anything out of the transmitter. Price is $125.
Thanks, Charlie Hugg, K5MBX

Well done for your assistance to the present owner, a fellow enthusiast, in
their 'hour of need' by providing to them what is probably a younger and
stronger back and your time and effort.
Would it be that we will all have such a good neighbour when needed!
And you are also supplying expertise and a care and concern that would not
be provided by a typical auction company or a bailiff, 'settling' an estate!
My comment/suggestion would be that within a reasonable limit of time and
effort you should encourage the owner to get the maximum for the items.
Whereas if you do sell it as a block to a single buyer they will probably
resell most of it for a profit?
The cynical may say that 'The nursing home will get the money'! Maybe; but
the owner deserves the ability to buy the maximum benefit from what is most
likely their lifetime of collecting, conserving and contribution to the
hobby and to society generally.

5698. Navy Rx. CFT-46154. Circuit info etc?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-05 04:33:50 UTC
From: Terry <tsanford@nf.sympatico.ca>
Message-ID: <tcwsd.42088$kI6.1918598@news20.bellglobal.com>
Source record: 20960

Trying to find at least a circuit diagram and other info. for a USN
CFT-46154 Rx.
This is a 1940s 15 kcs to 600 kcs.TRF. It uses metal octal tubes such as the
6SK7s series.etc.
I gather that it performed a similar job to, but is not the RBA receiver, of
the Navy trio, RBA, RBB and RBC Rxs that cover 15 kcs to 20 mcs.
The mirrored BAMA site lists the RBA, although I can't get that to download,
but not the CFT-465154.
Can anyone give me some advice or direct me to information. With the renewed
interest in LF I'd like to get the old-timer fired up (provided I can get
help to lift it onto the bench!)
Location here on the eastern tip of North America might be a useful
listening post.
Many thanks for any help.
Terry
A few miles from where in 1901 Marconi received the first Transatlantic

I vaguely seem to remember that number!
So I might have one in a box somewhere, condition unknown, left over from a
1937 Marconi radio site that shut down in 1956. Does that sound right?
I don't promise anything but I'll have a look next day or so; and if I can
find, you are welcome to it.
email as above if you don't hear from me.

FWIW, I have never seen anything damaged that was wrapped in at least 4 layers of LARGE type bubble wrap. No need to double box if you use that stuff usually.

For ultimate control panel protection, go to a fabric or upholstery shop and get some high density foam in 4" or 5" thickness and place it over the control panel. THEN wrap with large bubble wrap. The HD foam is NOT cheap, however, I paid $12 for a 24" x 24" pc last time I think. But sometimes you can get smaller scraps for less. The upholstery shops are usually better about selling stuff under 18" cheap because they cant use it in a regular chair or couch cushion.

Mel A. Nomah wrote:

> How can we be fair here, without starting a food-fight and looking like
> we're trying to "milk it for all it's worth"?

An open auction is, by definition, "fair," because no person
is forced to bid more than he does voluntarily.
There is nothing wrong with getting the best price you honestly
can for your friend's assets. In fact, you have an ethical duty
to do so. If, through a misguided sense of guilt about
"profit," you knowingly take less than you could have done
in an honest and fair manner, you have taken that money
from your friend, who needs it.
Describe your items in an honest manner and
allow your buyers to decide what they want to pay.
This serves your friend well and leaves your hands clean.

Secondly- auctioning here will be difficult and
will bring only a fraction of what you could have
gotten for your friend on Ebay. The market on
Ebay is far larger. Ignore the anti-Ebay whining of those few
who attempt to hide their simple envy by wrapping themselves
in "protector of the hobby;" that's just jealous nonsense.

How ever you decide to proceed, you are
to be commended for helping; it's a big chore.

Hi,

Did anyone hear anything about these Sea Dragon inflatable boats? Very similar to Zodiac dinghy boats. They have a web site http://www.BoatsToGo.com and it seems that their prices suspiciously low for inflatable boats.

At least twice lower then Zodiac boats. But I never heard about this brand. I need one for Key Largo trip in FL, but I want to make sure that boat is good. Has anyone bought inflatable boat from BoatsToGo.com? Please let me know your feedback.

Message-ID: <20041205162824.23255.00001478@mb-m03.aol.com>
Source record: 20976

Recently acquired a U.S. Navy multicoupler. This is a real beauty, and runs very cool unlike the Sylvania CU-1280 I had a few years ago. Description as follows:

Nomenclature tag on front panel reads:

Serial No. A4
29355-0135929
MF/HF Multicoupler
CU-2279/BRC
Des.Act.: Navalex Ctr. Charleston, SC
Contract N00612 - 84 - D - 0105

Standard Rack Mount, 3.5" height. 10" deep from back of front panel. Solid state. beautifully built, deutz fasteners on top cover.

Has two channels, A & B each has an N antenna input, 4 bnc outputs and 1 test bnc output.

Covers 100 khz to 100 mhz, performance drops off below 100 kc and above 100 mc (oops, khz, I'm old) Appears to have unity (no gain) when inserted between antenna and receiver, and 6db gain when "Amp On" button is engaged. Each channel Amp On button is lit by leds, and has a red "overload" section on the top half of the buttton. A friend obtained two of these off the E place and offered me one. Very quiet and a beautifully crafted piece of equipment.

However, I cannot find any documentation anywhere on it. I work for the Federal Government and have friends in supply and logistics attempt to run down the contract number with no luck.

Seems interesting the Destroyer Squadrons out of Charleston would have purchased these on their own contract?

Hope someone can shed some light on these.

And, no, there aren't anymore available.

Les Locklear

located in Ontario Canada. HRO Sixty with orig manual, speaker, 6 coils. Was formally owned by cbc so i was told. Unit is in nice cosmetic condition but not sure how well it works as i've been told it needs to be powered up slowly due to it being not used in over 15-20 years. Prefer to sell locally due to its weight. A friend of the family now passed away used to have a rca r-88 i think that we used to play around with. It had the broadcast band in it. I would consider some kind of a trade for one of them in decent shape. If interested email me with an offer and we can discuss. Please dont offer me a ridiculous amount as i'm not an idiot and have checked what they typically sell for.

thank-you

5717. RCA tube #UY-227 question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-05 21:42:31 UTC
From: nc183d@aol.com
Message-ID: <20041205164231.08238.00001580@mb-m04.aol.com>
Source record: 20978

Hi All,
I have a few N.O.S. RCA UY-227 tubes. Is there any use for these anymore or am I holding onto them for no good reason? Are they worth anything at all? I think that several years ago, I heard them referred to as "heater" tubes. I didn't know that anything got hotter than a good old metal 6L6 tube....
rgds,
Mark S.

any version of the type 27 tubes are very common and were used mostly in
1928-1930 era AC radios. They can be used as audio drivers, which is what
they were in radios. However, the audio community doesnt think much of
them, at least today.
Used, tested ones sell for $5 or less each, usually. Also common from that
era is the UY-224 (24A).

I am now selling off many new and used sweep and industrial tubes.

If you are needing anything, please email me now. I have stuff like 40KD6, 6JE6, 6JB6A, 6146, 807, 811, 866A, etc, etc.

Will trade for Centralab control stock like KB-1,2,3,4 switchcovers and shafts, possibly other brands like Clarostat, IRC or Mallory.

Bill,

I used those spray foam cans that they sell for replacing insulation in refrigerators after repairs and for insulating around electrical outlets that leak cold air in the winter. It was just a duplication on a much smaller scale of what I described. I've shipped some ancient Weston meters, a couple of 4-400's and several fragile optical instruments that way with no damage reported.

The only problem I had was guessing how much to squirt into the boxes. Had to do a bit of trimming when it expanded too much. The boxes I used were considerably smaller than the one the TenTec came in, and I recall needing only one can for two boxes. I tried to get about 4" of foam all around. Make sure the plastic bag that you put the items in has no holes or tears; that stuff really sticks to things.

I was tracking a T20 ARC-5 and just finished checking the status (5pm Pacific).

eBay has removed it from auction stating crap to the effect that it may be illegal to buy/sell it in our country. I checked status on a bunch of other ARC-5s and found some are restricted and some aren't.

I have never been able to get eBay interested in all the CB linears up for auction, but now they have decided the ARC-5 is bad for the country.(?)

May be our homeland security dollars at work for us....

Hmmm, sounds like you are new to ebay. They do this crap arbitrarily
based on where your ISP says you are located and such crap. I
understand their reasons for doing so but it really is a brainless
automated thing with no relation to political agenda.
Being in Puerto Rico USA I went thru a spate of this a couple of years
ago when I couldn't even access ads for "military" headphones. I figure
I wasn't the only guy to raise hell because they finally loosened up on
their defintion.
Now if a guy were to include "great for Arab Terrorists" as part of
their description, I'd SCREAM at ebay to nix the ads.
eBay isn't a Public Utility...at least not yet. They can set any rule
they want to. If you have a beef then tell them so. They seem to do
well in sucking up to popular sentiment.

Lessee...how do I compare an 8 lb TenTec rig vs a 80 lb boatanchor?.
Caution, folks. Much of the 'home' spray can foam will simply collapse
if you place a heavy shoe on top of it. Whats good for an old VTVM or
vintage knob might not play for an HT32.
Would you be willing to DROP, PUNT or TOSS your package as you enter the
front door of USPS/UPS/Fedex? If not, then go home and repack.

I haven't finished it yet but I have started a binder that lists a
reasonable price for each radio as well as the location of
"accessories", the manual, the spare parts, dead parts, cables, etc.

Perhaps someone will really want that leaky electrolytic that I
replaced. I don't restuff electrolytics in the Heathkits.

I still have the electrolytics that I've pulled out of the SB-303's
and they should go with the radio.

> I've sold a good bit on E-Bay - and carry a 100% positive feed back. IF it
> is junk - good for parts, I say so. If it is good, I describe it to the best
> of my ability. I've sold "some" items as "parts only" - with happy buyers.

Occasionally someone will list an item as "guarenteed dead, if
this radio starts to work within 10 days, return for a full refund."

If they list the details and include good pictures, I bid on these
aggressively. I've found myself in heated bidding wars with other
"fixers" who either want the parts or the challenge of refurbing the
radio.

One junker SB-303 had a good S-meter, power transformer, cabinet,
back panel, SSB and CW filter, and LMO. Lots of good parts that I'm
using to fix up other SB-303's.

I like RMEs but have never owned or worked on one.
But I do have a military Super Pro, BC-779A, and it is a great set. Its
outstanding feature is the continuously variable IF bandwidth control, which
varies the Q of the IF transformers by shoving slugs up into the coils as you
turn the knob. Just the ticket for hi-fi AM listening.

Two RF stages, push-pull audio (IIRC) and nice looking (tho not as sexy as an
RME). The power supply is separate, which is both good and bad (easier to pick
up the radio :-)

I wouldn't mind selling mine, since I have too many radios, but my version has
no BC band coverage -- it has two LW bands instead. SW bands from 2.5 to 20
MHz. In excellent restored condition.

When shopping for an SP-400, be sure to ask which bands it covers, since
Hammarlund made them (and SP-600s too) in lots of models with differing
frequency coverage. Best wishes, Mike K.

The '27 was the first commercial indirectly-heated cathode (hence "heater") triode, as opposed to tubes whose filament emitted the electrons (26, 45, 71A, etc.).

A 27 doesn't get very hot. They make good audio preamps and drivers (in late 1920s to early 30s radios) and also RF amplifiers and above all, oscillators in superhets.

They're common enough not to be worth a lot, BUT, since you mentioned "UY", you probably have the "globe" or "ballon" shaped glass envelope, which makes it more valuable (maybe $10) to an antique radio restorer, who wants the vintage look. I really love that old glass shape.

Anyway, try to sell them to a vintage radio guy. Advertize them in rec.antiques.radio+phono, or put them on eBay. --Mike K.

FOR SALE:

FOR SALE:
ROBOT 400 SSTV Unit in good condition. Great for video buffs.
The Robot 400 converts picture information in the standard
format with conventional fast scan TV to and from the format
used for Slow-scan TV around the world by radio amateurs and
others. The model 400 performs this conversion in either
direction, to and from SSTV.

This famous piece of retro gear was and still is
used for Slow Scan Television with amateur radio. Hook up
your camera, radio etc. and you are off and running.
Uses RCA phono plugs and BNC plugs for external connections.
120V AC Operation. Comes with the original instruction book
and schematic.
Will sell for $29.00 plus shipping.

Robot 530 SSTV Unit - commercial type. QTY 2
Similar to the Robot Research 400, but this is the commercial
version that was sold to non-amateur users.
Camera in, Camera Out, Frame Grab control, telephone
interface etc. Many extra features and same size/style
case as the Robot 400.
Will sell for $15.00 each plus shipping.

Robot 510 SSTV Unit - Commercial type. QTY 1
Has lesser features and same size/style case as
the Robot 400.
Will sell for $10.00 plus shipping.

battleship gray.
Has six scales up to 500 Volts.
Has the complete latching case cover and test
leads. Works fine.
Antique / collectible item in near perfect
condition.
Will sell for $75.00 plus shipping.

OLSON POWER/SWR Meter - in original box.
Looks like new. Has standard SO-239 Connectors.
Model CB-391 has two wattmeter settings for 1
Watt and 100 Watts.
Great for QRP. Or use the SWR scale for higher
power.
Available for $15.00 plus shipping

Triad-Utrad N-54M Isolation Transformer
Like new 120V to 120V isolation transformer rated
for 150VA.
Great for servicing receivers and smaller
transmitters
and other electronic equipment.
QTY 1 Available for $40.00 plus shipping

Allied-Knightkit Company - KNIGHT Impedance
Bridge.
Also marked Allied Radio Co. Unit is in very good
shape and
has the original knob. Includes R and X scales
with chart

affixed to the rear panel. A classic piece of
useful
Knight Kit equipment. Excellent working
condition.
Available for $19.00 plus shipping.

FOR SALE:

Drake 2B Receiver and 2BQ Q Multiplier. This receiver has it all.
It comes with the 2AC calibrator built-in, and also has the 2BQ
accessory. There is an original manual for both.
All cables are included. There are even some extra crystals for
coverage of some additional bands.
Will sell the Drake 2B for $220.00 and the 2BQ for $170.00
The manuals are available for an additional $20.00 each.

How large is large?

Antique Electronics Supply has some old replica ones that are nicely made
and cheap, but they have a whole lot of windings... if you want something
to use for HF antenna tuning it might be a bit too high value.

I have a very clean (inside and out) TenTec 238 L-network antenna tuner for sale with original manual. This is the identical to the one that they are selling today for $485 except it is in a lighter color scheme and has the lighted sliderule roller inductor dial. I am asking $275 plus shipping from 60118. .

Thanks
Tony - W9JXN

Yes, SP400 will work wonderfully if recapped like all vintage gear.
To the contrary, the RME 45 is essentially a useless piece of junk. I have
never seen one work worth a darn. I have no idea how they ever sold them!

The SP-400X covers 540 kc to 30 mc, the SP-400SX covers 1.25 mc to 40 mc. Those were the only two versions produced, whereas the SP-200 was produced in more than 17 versions counting the military and civilian versions.

For the home-brewer:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5736402207

Still in factory wrapper.

Made of rigid 3/32" aluminum, the dimensions are roughly 7" wide x 6"
deep (front-to-back). The height is about 3" in back, sloping to about 1
3/4" in front. Two-piece construction, the side-bottom-side piece is
medium blue wrinkle, the back-top-front piece is a smooth off-white.
Bottom feet and attaching hardware are included.

It wasn't one add; it was a handful, each by a different person.

Today I found eight that were blocked. One was a military aircraft receiver
that covered 520 to 1600 kHz.

I feel a lot safer now, knowing someone in the US has been prevented from
listening to the Broadcast band.

I've been asked to inventory and sell off the ham shack of an SK ham who was also an avid homebrewer. One of the items I noticed in my first visit were two or three Ohmite cabinets with many drawers each of resistors organized in ascending value, starting down around 10 ohms and going up in standard steps up into the megohm range (didn't notice if they are half or quarter-watt). In the few drawers that I opened I didn't notice any vacant compartments. After the holidays (the widow is spending the holidays with out-of-state kids/grandkids) I'll be going back and will photo the stuff and put it on eBay.

I've never been able to figure out whether my BC-779A is closer to an SP-200 or SP-400 overall, or somewhere in between. In fact, the 200 and 400 don't seem to be much different in tube lineup or physical design, and I did check the usual reference books. I have a complete SAMS for the 400.

But from your posting, the 779 would be a 200 series. Thanks, Mike K.

Can anyone please help. I have at long last managed to locate a Nova Tech Nova Pal DF RX. It has a minor fault - the BFO doesn't
work!
Have checked the switch, and cleaned it up (was bad- now OK) and it is still not working :-(
If you could possibly help with a scan or some info I would be eternally grateful.
Many thanks,
The Ol' Sea Dawg

5767. Wrong S-meter in Hallicrafters SX-28?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-07 22:44:55 UTC
From: Phil Nelson <philnelson@nospam.xyz>
Message-ID: <Hnqtd.4422$0r.2451@newsread1.news.pas.earthlink.net>
Source record: 20928
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Am I nuts, or did somebody stick the wrong Hallicrafters S-meter in my SX-28?

My other (restored) SX-28 has the "backwards" meter, meaning that it rests to the right when the power's off. When you power up, it moves to far left at no signal, then deflects to the right under signal.

In the SX-28 I'm currently working on, the meter behaves like an ordinary ("non-backwards") meter you'd get at Radio Shack. It rests to the left when the power's off. When you power up, it moves to the right, then deflects to the left under signal. Here are a couple of photos.

The first photo shows the set tuned to no signal (RF Gain turned all the way down), resting around the midpoint.

http://antiqueradio.org/art/temp/SX-28MeterNoSignal.jpg

The second shot shows the set tuned to a strong local signal (RF Gain turned up), deflecting full left.

http://antiqueradio.org/art/temp/SX-28MeterFullSignal.jpg

I checked the voltages and connections to the meter, which appear OK. The resistors leading to the meter are also OK. AVC is working well, and the S-meter adjustment pot is within spec. The radio's about half-recapped at this stage. I have done the electrolytics, audio, AVC, and IF caps. Still to come are the RF & various others.

The markings on this meter look different than the ones on my restored SX-28, but I had been told by other SX-28 owners that both markings were used.

The radio's usable in this condition, but . . . funky.

If this is the wrong meter, anybody have a working SX-28 meter you'd like to trade for it? I assume this one comes from some other (possibly earlier) Hallicrafters set.

See that big black strip on the meter? Thats tune position. Run 20 to 25
watts of drive from the exciter. Try tuning the plate and load so it is
even with that mark.

If it has been sitting around a while you may have problems in the
electrolytics.

If you tuned it up with high drive, and had the cap maxed out you may indeed
have blown the grids out of a 811 or two.

If you did they will 'rattle' and you may be able to see some trash in the
tube rolling around.

I need an aligator 2 meter amplifier for FM ragchews with people I've known for a long time but are now at a fringe ground-wave distance since I moved away from them. I'm talking about 300 (min) to 500 w output, and something like a pair of 4CX250bs in PP. The older ARRL handbooks have a pair of 4-125 in PP power amp which would be OK and I'd consider building one if its not a bear to tune, adjust, or neutralize. I also hear there are some affordable Russian metal ceramic tubes out there (one of the recent ham magazines) and I'd love to hear from anyone who can tell me if buiding around any of them is feasible and practical. Lastly, I think its Command Technologies or something like that that has a high power amp for 2 meters (using metal ceramic tubes) but I can't afford or justify their prices. Do the big brick amps hold up? My 80 w out LUNAR amp still works but my RFConcepts 160 out amp melted down. Several times.

The conventional answer to the above problem is to recommend more elements in the antenna and/or higher placement of those elements. For additional reasons beyond the scope of this post, neither of these options is, at this time, practical for me.

I'd appreciate hearing from anyone who has an old 2m aligator amp (working and stable) they would like to convert to cash. Or, if they have any other bright ideas (we're not going to get into satellites or Echo Link stuff, either).

I may not check my email inbox right away, so don't expect quick answers. Also, we don't take telephone calls when they ring and would prefer just sending an email to the address I am sending from.

73,

Art, W4PON

I do not have any such thing, but Fair Radio currently has a bunch of high power VHF aircraft sets. Some of them are just linear amps (and they have to be linear since this is AM) and some are full transmitters with plate modulation. Either one of them could probably be hacked up into 2M amp duty. The finals need to be retuned. I don't know what extent you'd have to add extra trap stuff if you were to move the bias point down, but hell, you can run FM through the class AB amp and throw away some power.

The aircraft VHF stuff is basically a glut on the market right now because there are a lot of upgrades going on, and the old gear is all AM and not very useful for ham service without some hackery.

Phil:

I did a quick look through Dachis' book, and see no early Hallicrafters receivers with left resting meters. I suspect
someone replaced a failed movement in your original meter with a standard movement. S-meters of that era were likely
standard meters except for the position of the zero. If you study the design of S Meter circuits, and recall that tubes
were the cost driver, a reversed meter movement was the least expensive way out. Screen current on an AVC controlled
tube provided a cheap way to get a meter to move with signal strength, except it was backwards. If you can engage a
meter repair person, that movement can be made right resting, and the leads reversed inside, and you will be back to
where you want to be. Check carefully and see if the leads to the meter are reversed on the back. If they are, then
the second step above is not necessary, just return the wires to their correct locations. But the mechanical internal
adjustment is still required.

think all you'd have to do is see if the needle is resting to the left or full scale
to the right with radio off.

Phil, SX-28 here in the shop awaiting restoration
has the S meter with the needle at full scale. If the S meter in your set is
indicating signal strength properly, putting in the "correct" meter might involve undoing other changes?

John

What kind of package? Are they similar to the Allen Bradley
cylinder packaging? Or, do they have a more "modern" look to
them? I generally look for the NOS Allen Bradley resistors when
I can find them.

Hmm, a light bulb flickers dimly in my brain. That would explain why it looks stock but works backwards. The case of this meter is split to heck all around and bound together with friction tape, but I figured that was not that unusual for such old meters. When I opened the smallest electrolytic can to restuff it, the danged thing split into about five pieces in my fingers! But I could believe that somebody pried this case apart with a screwdriver.

Is this something a fumble-fingers like me could attempt? What's involved in making a movement right resting? I have little to lose at this point . . . .

> Check carefully and see if the leads to the meter are reversed on the
> back. If they are, then
> the second step above is not necessary, just return the wires to their

> adjustment is still required.

Living dangerously, I reversed the leads on the back of the meter. Now it behaves the same, but instead of zeroing at the middle (OK, the 7 marker) and deflecting to dead left (the 1 marker), it zeros at dead left and deflects off the scale farther left. So I assume further surgery is indicated.

Thx again for any advice.

Regards,

Phil Nelson

I have fooled with a few meters in my time. The last was a D'arsonavol (sp) movement in a Sprague TO-4 cap checker a few weeks ago. The meter has a Full Scale (FS) deflection of 5 ma. 2% and 25 ohm internal resistance 2%. It needed a though cleaning, a new internal series resistor and a calibration. The cap checker was a victim of some sort of flood that deposited quite a calcium buildup in the meter movement. I used CLR and soaked the meter coil to dissolve the deposits. (It was totally frozen an useless.)

I fashioned a little pick out of using length of # 22 stranded wire. Cutting away all but one strand making a little right angled pick to clean out loose deposits from between the armature and the magnet (if I got the terminology proper). What I discovered is the following:

1) The meter needle position can be set to left, Right or center by adjusting both front and rear "Zero Adjust" mechanisms simultaneously. This does not affect the FS current calibration. I know because I tried to calibrate the meter using both return springs.

2) The full scale deflection can be calibrated by feeding the FS current and adjusting the counter weight. Use a resistor at lease 10 time (I used 100 or 1000 times) the internal resistance of the meter and a variable power supply capable of supplying 0-50 volts DC. Through the meter and moving the teeny weight that is 180 degrees from the needle closer or further away from the pivot point the FS reading can be set. Very small movements will make a big difference. Use good tweezers and those +3.5X cheep reading glasses from the drug store :~)

I calculated a series resistor by picking a voltage like 10 volts. And taking the given FS current choose a resistor. The meter will have little overall insertion effect. I used a series current meter to get accurate FS current and to check the mid scale and other points on the scale.

3) I believe the mid scale calibration can be set with by moving the little weight that is 90 degrees from the needle. However, I did not have to touch this weight. The mid scale was right on the money. I figured the 90 degree positioned weight is for mid scale since the 180 degree is pointing straight down and would have no effect on mid scale when pointing straight down.

4) I adjusted the front and back pivot screws so the armature looked as centered as I could see (front to rear). AND there was no sticking of the needle when physically or electrically deflected and allowed to return suddenly to zero.

5) I worked very very slowly so I did not slip, break, bend or stretch out anything that is sensitive.

The series resistor has minimal effect on the full scale calibration. I found the meter's overall internal DC resistance on the parts list of the cap meter. I made up a network of 5% tolerance resistors to Sum with the resistance of the "armature" to come with in 1% of the meter's specification.

Do not use your VOM resistance function to measure the armature's DC resistance. The battery inside puts out too much current and you risk burning up the armature windings. The DVM (fluke) was ok for the 5 ma FS meter. It barely deflected the movement. I got a good resistance with the fluke and calculate the series resistance.

Good luck,

Assuming you're not serious about "fumble-fingers" - it is likely "doable" - though it takes a LOT of patience and you will sacrifice some accuracy (though IIRC the S-meter system in those radios were "relative" anyway).

First you want to determine what type of meter movement it is - hair-spring (likely), taut-band, or other (not likely). If it's a hair spring (spring that spirals in - in a flat plain) and has both a front and rear adjustment- then it's likely you can successfully "re-zero" it. The front spring mount usually has a large loop adjuster that is often engaged by an eccentric pin from the face that allows external zero adjustments- the rear usually also has an adjustable spring mount - but far more "dainty" as it's not intended for frequent adjustment - in fact most are never touched after first calibration when made. It's this back adjustment that you want to CAREFULLY turn until you zero the meter at the right. Be very careful to not kink the spring, etc. - most meters will have enough play to run them fully across using only the back adjustment - though with some - you may have to use some of the front adjustment as well. Since the meter will now be "unwinding" the springs rather than winding it - the meter's linearity will be less than it should be - but in this application - I doubt anyone would notice. Just be sure and check for clearance around both springs as they flex as the needle swings -- as again - the springs will be "un-winding" now rather than "winding".

Once reversed - you'll have to experiment some to see how it reacts - whether it appears that the indicated reading is what you would expect - or if you need to "adjust" the circuitry a bit to better "calibrate" the system.

The meter enclosures in some variants of the SX-28 were famous for
cracking. Crap probably got inside the original movement after the case
cracked, and that's why it was replaced.

This problem is common enough that someone is actually producing a kit
to fix it. For more info:

http://bama.sbc.edu/Lloyd%20Godsey's%20Blooming%20Meter%20Fixer.htm

I'm not sure I would attempt it. I had a friend once that did this on a
replacement movement on a radio he was fixing (an SX-24, IIRC). The fix
involved reversing the little spring on the base of the needle AND
reversing the internal wires. Nerves of steel doesn't even begin to
describe the economy of movement required to do this. This guy was an
orthopedic surgeon, so it was something he did everyday. Mere mortals
such as ourselves shouldn't even try it. I would definitely take it to a
pro, or look for a replacement meter on eBay. They do pop up from time
to time there.

Uhhh - those counter-weights aren't for that purpose - they are there to balance the movement regardless of position (vertical - laying down, on it's side, etc.). They are to be adjusted so that the meter needle doesn't move (i.e. stays on zero) regardless of the meter's physical orientation. If you try to "calibrate" the movement with those - the meter will become very "gravity" sensitive - and loose much accuracy - depending on "how it sits"...

best regards...

I was hoping someone more knowledgeable would speak up! It did occur to me
that the position of the meter would be affected. It is minimal sensitive
to horizontal (in its back) and vertical operation.

What probably happed to my particular case is the cleaning process moved the
weights and I probably resorted their original position.

Is there any documentation about this topic? Some official book? Admittedly
I have not Googled the subject just yet.

Thanks Randy for the clarification,
Paul Pinyot.

Yes - my favorite reference is NavShips EIMB TM&Ps - which in civilian language is: US Navy's Electronics Installation & Maintenance Books; Test Methods and Practices - my particular copy was published in January, 1964- and carries NAVSHIPS 900,000.103. Section 5: Care, Repair and Calibration of Test Equipment, subsection 5-2d(4) covers dial pointers, zero adjusters, etc.; and section 5-2d(6) covers balance weight tests; 5-2e(1a-c) balance weight adjustments (various types of meter construction); 5-2e(2) Zero Adjustment; 5-2e(3) Pivots; 5-2e(3a) turning, lapping, etc. of pivots; 5-2e(3b) End-Play Adjustments; 5-2e(4) care and feeding of the hairsprings; and finally: 5-2(f-k) - calibrating meter movements of various types - including charging/discharging the movement's magnet.

The EIMB library consists of several volumes:
900,000.1 Communications
900,000.2 Radar
900,000.3 Sonar
900,000.4 Test Equipment
900,000.5 Radiac
900,000.7 Countermeasures
900,000.100 General
900,000.101 Installation Standards
900,000.102 Electronic Circuits
900,000.103 Test Methods and Practices *
900,000.104 Reference Data *
900,000.105 RF Interference Reduction

The two marked with an asterisk I consider two of most valuable books in my library - they are of great value to anyone with a more than casual interest in vintage / tube electronics (IMHO).

best regards...

How stable do they need to be in an old radio where components values
can vary, sometimes by quite a bit, and the radio will still perform
just fine?

Um...let me give you a "english translation" for the "shop talk". The word
"alligator" means a pretty hefty power level. The "2 meter" part means the
2 meter amateur band. Most hams know this means the 144.000 to 148.000 mHz
range of frequencies. "What would the meters display?" Well, that's your
question since its pretty clear you don't have what I'm interested in.
But, one possibility I'd be interested in would be a homebrew job that had
at least grid and plate current panel meters, but a builder could have put
in a rotary switch to connect one panel meter to different parts of the
circuit. Ever hear of a D'arsonval movement?

Hi All,

I have 2 Hallicrafters S20R speakers for sale.

1) This one is only the speaker, looks like it may have been repaired many years ago. Missing the field coil, but works great, no rattle whatsoever. $10.00.

2) This one is in perfect condition, never been repaired, still has its original field coil, works great and doesn't rattle at all. $25.00.

Prices DO NOT include shipping from the 07860 zip code.
Photos available upon request.
rgds,
Mark S.

Go to the BAMA site, and there is a link for a guy who makes a
repair kit for the split SX-28 meter cases. That is a very common
problem. I call them cherry bombed meters!!

Wanted - Cheap - for Drake TR-4C: broken AC-4 or AC-3, or home brewed power supply, or modifiable power supply by other manufacturer, or interesting power transformer.

I want to power up a Drake TR-4C I picked up. It did not have a power supply. The price an AC-4 power supply brings today is more that the transceiver is worth. Are there more radios out there than power supplies? (Kind of like there are more horses asses than horses). Are the high AC-4 prices a function of scarcity or what?

I've looked at the schematic of the AC-4 and decided that it's not rocket science. I'm not putting together an "original" collection of Drake equipment and I don't need the power supply to fit within a MS-4 speaker (which I don't have and don't need). So - I think I have some economically appealing options.

- I could repair a broken AC-4, AC-3 as long as the transformer is OK.

- Home brew power supplies do not scare me.

- It's possible power supplies for other rigs could be adapted to work with Drake gear.

- I could build my own homebrew power supply. The critical component would be the power transformer / transformers. (There are many power supply designs that would work).

Here is what the power supply needs to do:

Input: 117 vac
Outputs: (12.6 vac @ 5.5A), (650 vdc @ 300mA average - 500 mA peak), (250 vdc @ 175 mA), (-45 to -65 vdc for bias)

If any of you have something to sell me that will get me there, please let me know (with details).

Thanks Jeff - KA9S

If the replacement meter works properly,
and the modification was done neatly,
why not just leave it alone? If a good meter ever becomes
available, then change it out.

Not many folks would know, or care about the difference.

The question is pretty much answered by the fact that most antique
radios used 20% carbon resistors. Many of these original resistors
have aged upwards of 100% over time, and the radios often still
run "just fine". The manufacturers saw no need to use high tolorence
components, and most of the circuits are self biasing and self
compensating to some degree.

Vintage radios aren't rocket science. Good NOS carbon
comps from reputable manufacturers are fine.

Well lets see how this plays.... I have to take this old solder joint apart anyway to removed to leads from the capacitor.... or rubber insulated wire... and in this same hole is this old resistor thats 19% off value.. Now this new resistor is going to cost me a whole 3 cents.... or even if the thing was a dime ... now this new part doesn't look quite like the old one.... it doesn't look like a dogbone... and it doesn't even look like a AB Striped Resistor.... but its UNDER THE CHASSIS .. and for 99% of the old radios that we restore... whats UNDER THE CHASSIS is acceptable as long as it is good electrical practice and makes the radio play like it is supposed to play....

Now if I am doing up a $10,000 Zenith Strat .... or a $75,000 Sparton Nocturne.... then I'll make those new parts UNDER THE CHASSIS .... look exactly like the old ones.... most any radio other than those high end ones.... or if a customer want to pay me enough money I'll do it on an AA5 plastic 1950's kitchen clock radio.... So where is the beef about using a new part that is a whole lot closer to tolerance.. and will stay there.... and the cost of the part is so cheap that it just doesn't make sense to me to leave that 19% off resistor ...

I bet that you don't replace those little dog turd looking capacitors that RCA used in the front ends of their radios either.... little black sort of pointed on each end... like the 811K and 19K and a bunch of these things..... now for a whole 15 to 25 cents each I can have these nice looking new.. 1% tolerance silver mica caps .. and when I do the alignment on that radio.. it will play like it is supposed to.. and stay that way for a lot of years...

> Not many folks would know, or care about the difference.

I guess the honest answer is . . . that it bugs me. The replacement is functional. On the other hand, it not only works backward but zeros near the midpoint rather than all the way to one edge. So it can't be as responsive on weak signals as if it had the full range of travel.

My plan for this SX-28 is that it'll be my "keeper." It's a one-owner rig that worked well as found, unabused and unmodified except for this meter. I'm taking pains with all the work to make sure that it's as squeaky clean as I can manage. (Everything is easier the second time around!) I even went so far as to restuff paper caps for a while, until I got impatient and noticed how hard it would be to cram some of those big paper cases back into the crannies whence they came, without disturbing lots of other components.

I suppose I could always change meters with my first SX-28 and then keep an eye out for a replacement or just dispose of that set as-is. The thought of having two of these beasts open for surgery on the same workbench is a little daunting, tho' :-)

You could probably use a Heathkit HP-23 or one of the A/B/C
varients. The Heath's voltages are higher than what you spec.

HP-23's are about $50. There's almost always one or two on eBay.
I saw one go for $30 at a hamfest this spring.

==========
An 'all in one' transformer might be difficult to find ; however since it is
assumed the unit is in a separate enclosure ,you can implement the power
supply unit with up to 4 separate transformers which no doubt can be found
at various ham fleamarkets .
The biasvoltage can probably be obtained through a separate diode and zener
voltage
circuit ,using the transformer supplying 250V @175 mA ,which would enable
you to implement with a maximum of 3 transformers.
Good luck with your quest.

Well, I test every component before I install it, and so far most of
the NOS carbon resistors have been well within tolerance.
Carbon resistors made much before 1950 do have some issues
with aging, and I find 50 to 75% well out of spec and they do get
changed. I'd bet most of the resistors
you were changing in 1959 are probably the same vintage that are
found bad today. I won't argue metal films aren't better, but I
haven't had problems with good quality carbons either.

Over the years, I have found that carbon comp resistors with a matte
finish are much more likely to increase in ohmic value that those with
a glossy finish. I surmise that the former are much more hygroscopic
than the latter.

Yes, I've seen various versions of them on ebay from time to time.
There is a "extract" of a more modern revision here:

http://www.phy.davidson.edu/instrumentation/NEETS.htm

Go to Module 21. Module 19 contains extracts of Reference Data...
though the full original is (IMHO) much more useful for those interested
in vintage stuff. These are part of the Navy's NEETS training - an
introductory course into electronics -so unfortunately - they don't go
into much depth. Module 19 does contain much reference data though -
useful to almost everyone - and as they are in PDFs (almost) everyone
can download them for free.

TM&P's "real" Navships number is 0967-000-0130 and Reference Data's
"real" Navships number is 0967-000-0140.

best regards...

In addition to the voltage being MUCH higher than the Drake likes, the Heathkit HP23-series supplies couldn't begin to provide enough plate current for a TR-4C! Peak current consumption of, say, an HW-101 or SB-102 is 250 mA. The Drake draws twice that!

Check this out:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48701&item=5736928323&rd=1&ssPageName=WDVW

Not an exact replacement, but pretty close. Only purists would see the
difference.

If you're not a stickler for historical accuracy, this one would
probably work too:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48701&item=5736588203&rd=1&ssPageName=WDVW

or this one:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48701&item=5737001090&rd=1&ssPageName=WDVW

or, perhaps you could buy one of these and take the cosmetics from
your old meter and mate them with the new one for a more authentic
look.

Just a thought.....

-Scott

Hey, and the price is right (at least so far :-). Earlier today, I received mail from Doug M. indicating that an SX-23 meter should also work. So I have a couple of alternatives to look for.

Thanks!

Phil

I would really have to question that a Power Supply for your Drake could be made cheaper than buying one unless you find enough fools to give you all the parts and they pay the postage to ship them to you. You should be able to find a good used AC4 or $75 and an AC3 for even less. A Heathkit should work with minimum modification put they seem to go for about the same amount. Try a Swan or a Galaxy but I expect they will be just a little cheaper but not much. I believe the rule is about a $1 a pound. Just don't look at the Collins stuff.

I might be able to find you a Transformer but it will cost you $25 plus $15 for postage.

Source record: 20881

Ok, so I was at the hamfest last weekend and picked up a nice little box that I have no idea of what it does. Allow me to describe it.

Name plate says "Nems-clarke", "accessory unit". "type 121" Vitro electronics", a division of Vitro Corp of america, Silver Spring, Maryland"

on front it has the following controls

1. Jewel indicator with a 6v bulb
2. 5 amp fuse holder
3. 1.2 amp fuse holder
4. 3 position knob "ac, off, 6vdc"
5. volume
6. "cal" (screw driver turned pot)
7. "zero" (screwdriver turned pot)
8. two prong jack marked "recorder"
9, PM speaker (4 inch 8 ohm)
10. very small, blade type, banana plug looking, socket. Marked Input (back side only has 1 green wire running to "cal" pot.

On the back
1. j101 looks to be a two pin ac plug
2. j102 4 pin jones connector
3. j103 6 pin jones connector.

Inside
1. Two 12au7 tubes, with corrugated tin overwrap and spring loaded tube shields (looks like they were built to hold the tubes in place, due to vibration and or jarring)
2. Big transformer in a sealed rectangular box marked "ac-15380" 15 large tie posts numbered 1-15
3. Mallory 825s 6 volt replacement vibrator (4 pin)
4. two Sprague aluminum electrolytic caps 30, 20mf (350v) and 40,40 mf (25v)
5. two large adjustable resistors. Biq rectangular wirewound with 10 taps on the underside

Underside
1. two 1 inch florescent painted squares marked federal ITT, +, 1013, 179736 and 1796012. These look like diodes to me. My Dad had a battery charger that had one of these plates inside. My brother and I cooked the diode it while lighting steel wool on fire in the garage!!! yep we were idiots!!!
These two parts are not attached to the chassis. I think that they bolt to a stud, with a spacer, both of which were found laying in the bottom of the case.
2. All wires are laced with black thread. Very Very nice job!!!!
3. all resistors are mounted on a fiberglass board with solder tie posts at

each end. Very point to point and very robust, again for vibration??????

Bottom
4 dimple feet
2. a large, long knurled knob that extends to a stud at the top of the box. It looks kind of like a camera tripod mount. I am guessing that this is how the "accessory unit" attached to the source.

That's about it...

I have no idea what the heck it is.... my wild guess is that its a mobile and/or fixed amp for some type of device that would produce a tone or signal that needed to be beat against for reception. There are no tuning controls or crystals or anything that would say receiver...
It might just remain a mystery, as google does not show any hits on vitro electronics type 121. It sure is built like a tank... If anyone has any ideas,,, post em!!!!!!

Mike -

You likely will not find the original Kenwood option, but a good alternative
is available.

Nice small internal CTCSS encoder boards used by commercial business radio
community have been manufactured by Communications Specialists for a number
of years.
http://www.com-spec.com/index1.htm

SS-64 CTCSS encoder (internal)
http://www.com-spec.com/ss64.htm
TS-64 if you desire (or require) both encoding and decoding (internal)
http://www.com-spec.com/ts64.htm
A 32 tone encoder in an external enclosure is also available
http://www.com-spec.com/te32.htm

There is a specific hook-up instruction sheet for your Kenwood TR-7600
on the Com-Spec web site. Good owner, great company support.
http://www.com-spec.com/insheet/tr7600.pdf

recalled
anything said about Mary Meyer.

To me, this apocryphal anecdote and Leary's book seem ways to bolster a tale that needed to be recycled and souped up before its chinks began to show. Leary's reason for being a part of the effort may be through his association with intelligence asset Liddy. Or it may be because he was never enamored of the Kennedys' approach to the drug problem, which was antagonistic to Leary personally and a lot less liberal in its approach. Leary was quite frank about this in his book High Priest (p. 67) and later in Changing My Mind (pp. 143 ff.). Whatever his motives, Leary's retroactive endorsement is just not credible.

The Split at the Post

In fact, when it comes to Mary Meyer, stories between the same couple are not consistent. As mentioned previously, Bradlee states in his book that Kennedy's name was not in the diary. Yet his wife told The National Enquirer, that although she only looked at it briefly, Kennedy's name was there. According to an interview with writer Debbie Davis, Ben Bradlee once told television personality David Frost that the diary was not even a diary but in fact a sketchbook.

In this regard, Tony Bradlee made a telling comment to the National Enquirer in 1976. In the notes written up from her interview, after she has discussed (with a bit of ambiguity) whether or not Kennedy's name was in the diary, she is quoted as saying: "But the diary was destroyed. I'll tell you that much is

Phil,
I am catching this thread in the middle, but I think your asking if the meter can be made to work properly. Apparently the meter has been modified during somewhere in the process, either by the prior owner or by your restoration efforts.
My SX-28 S-meter movement is full scale zero (power off resting position), and screen current of the IF amplifiers drives the meter to left end of scale (normal zero position). AVC action reduces the screen current moving the needle upscale.
To make your meter work properly will require dismantling the meter to be able to adjust the rear spring attachment (like the front spring attachment that allows you to zero the pointer) so the meter zero is at full scale, then reinstall the meter and reverse the connections. With the meter sitting at full scale, the opposite current flow is required to deflect the needle downward to left end of scale, and AVC action will allow the meter to deflect toward the resting position (in this case upscale).
Good luck,
Denis

AM - ice skating. Bradlee's first
marriage was into another wealthy Massachusetts family, the
Saltonstalls. Bradlee may or may not have succeeded in deceiving
Kennedy about who he was (I hope not). But the fact that he feels
the need to hide all this - and more - from the reader is
instructive to the matter at hand. Because, as we will see,
Bradlee's writings on the Meyer story are at odds with other
renditions. And no one has ever bothered to point out the many
discrepancies, or a possible motive for them.

Bradlee's Version

We now come to the most relevant part of the Meyer story: the
circumstances surrounding her lost diary which supposedly
contained notes on her affair with Kennedy. No one today can say
what happened to it, or what it actually contained. To begin to
explain why, let me summarize the account about the matter given
by Bradlee in his 1995 autobiography A Good Life.

The night of the Meyer murder, at his home, Bradlee got a call
from Anne Truitt, Mary's artist friend and then the wife of Jim
Truitt, Newsweek's Tokyo correspondent. Mary had told Anne to
retrieve the diary in case anything happened to her. The next
morning, Ben and Tony went to Mary's house. Once inside they
discovered James Angleton there (Bradlee provides no explanation
as to why he was there). No diary is found. But later in the day
the Bradlees decide to go to Mary's art studio which is down the
alley in their garage. They again discover Angleton there in the
process of picking the lock. Embarrassed, the super spook walks
off. The Bradlees make a pass through the studio and don't find
the diary. But an hour later, Tony secured it. In Bradlee's
telling, there is only a diary. Bradlee writes that, although
Kennedy's name was not in it, it was clear that he was the person
having an affair with her. Bradlee decides not to make the diary
public an

of the massacre, General
Peers, had a long term relationship with the CIA. In fact, former
Special Forces Captain John McCarthy told me that-in terms of
closeness to the Agency-Peers was another Ed Lansdale.

By the time Hersh's second book on the subject appeared, the
suspicions about the massacre, and that Peers had directed a
cover up, were now multiplying. Hersh went out of his way to
address these questions in Cover Up. On pages 97-98 the following
passage appears:
There was no conspiracy to destroy the village of My Lai 4;
what took place there had happened before and would happen
again in Quang Ngai province-although with less drastic
results. The desire of Lieutenant Colonel Barker to mount
another successful, high enemy body-count operation in the
area; the desire of Ramsdell to demonstrate the
effectiveness of his operations; the belief shared by all
the principals that everyone living in Son My was staying
there by choice because of Communists...and the basic
incompetence of many intelligence personnel in the Army-all
these factors combined to enable a group of ambitious men to
mount an unnecessary mission against a nonexistent enemy
force, and somehow to find the evidence to justify it all.

I won't go into all the things that must be tr

he was thinking of
the Vice-Presidency (p. 147). Epitomizing this idea, Davis relates a personal vignette about the Kennedy family wake after JFK's funeral. Davis, a cousin of Jackie Kennedy, was leaving the hall and paused to shake hands with Rose Kennedy to offer his condolences (p. 450). Mother Kennedy surprised him by saying in a cool, controlled manner: "Oh, thank you Mr. Davis, but don't worry. Everything will be all right. You'll see. Now it's Bobby's turn." Such coolness differs greatly from what is revealed in the recently declassified LBJ tapes in which, after the assassination, Rose could not even speak two sentences to the Johnsons without dissolving into tears. But the portrait is in keeping with the ruthless monarchy that Davis takes great pains to portray.

As I said above, the main focus is Kennedy's short-lived "dynastic" presidency. And this is where some real questions about Davis' methodology and intent arise. As he does in his assassination book Mafia Kingfish, Davis proffers a long bibliography to create the impression of immense scholarship and many hours quarrying the truth out of books, files, and libraries. But, like the later book, the text is not footnoted.

So if the reader wishes to check certain facts, or locate the context of a comment or deduction, he is generally unable to do so. But fortunately, some of us have a background that enables us to find out where certain facts a

special congressional committees.

The committee in the Senate was headed by Idaho's Frank Church. Other leading lights on that committee were Minnesota's Walter Mondale, Colorado's Gary Hart, Tennessee's Howard Baker, and Pennsylvania's Richard Schweiker.

As writers Kate Olmsted and Loch Johnson have shown, the Church Committee was obstructed by two of the CIA's most potent allies: the major media and friendly public figures. In the latter category, Olmsted especially highlights the deadly role of Henry Kissinger. But as Victor Marchetti revealed to me, there was also something else at work behind the scenes. In an interview in his son's office in 1993, Marchetti told me that he never really thought the Agency was in danger at that time. He stated that first, the CIA had infiltrated the staff of Church's committee and, second, the Agency was intent on giving up documents only in certain areas. In Watergate terminology, it was a "limited-hangout" solution to the problem of controlling the damage.

The Escape Route

The issue that had ignited so much public interest in the hearings had been that of assassination. CIA Director Bill Colby very clearly drew the line that the CIA had never plotted such things domestically. Colby's admission was a brilliant tactical stroke that was not appreciated until much later. First, it put the focus on the plots against foreign leaders that could be explained as excesses of anti-communi

Smith's friendliness with Hersh, seems to
further this. For according to the ARRB's original timetable, the
Vanity Fair piece would arrive at the beginning of its last year
and Hersh's attack book in October, right when the Review Board
was originally set to shut down. This would make a nice pincers
movement with which to smother the Board's serious and
blockbuster work amid sexy smears about abortions and Marilyn
Monroe (Hersh).

In historical perspective, the Times and Safire, and the Post and
Ben Bradlee (who, as we shall see, also embraced Exner) opened
the flood gates to all kinds of National Enquirer type stories
about JFK's private life. Rumors about Monroe, numerous
secretaries, these all started to get tossed about. A prominent
one about to be recycled emerged just a year after Exner. It was
promulgated again by Bradlee's Post via The National Enquirer.

Mary Meyer

Mary Pinchot was the niece of that early conservationist hero
Gifford Pinchot. She married CIA officer, and Allen Dulles
prot�g�, Cord Meyer. Mary's sister was named Tony and was married
to Ben Bradlee. Mary and Cord divorced in 1956 and he later went
on to become a CIA - associated reporter for various papers
including the Chicago Tribune. In the fall of 1964, while walking
along the tow path of the C & O Canal in Georgetown, Mary Pinchot
Meyer was murdered by being shot through the face. A

phone, she told him
for the first time about Mary's wishes. At this point, the Angletons, Tony Bradlee, and another (unnamed) person make a search at Mary's home. Again, the diary is not there. The search continued in the garage-studio (time not specified). In this version, several papers and the diary are discovered. Tony Bradlee gives it all to Angleton and asks him to burn it.

Angleton burns the papers only. He "safeguarded" the diary. Years later, Tony asked for the diary. Angleton gave it to her. She burned it, and the witness was Anne Truitt.

Ron Rosenbaum

The longest treatment of this whole affair was one of the earliest. Ron Rosenbaum did a story for New Times in 1976. In his version, the Angletons went to Mary's the day she died. When no one answered, they entered the house. From her answering service(!), they found out she was dead. They proceeded to the Bradlees' home to make funeral arrangements. Later that night, Jim Angleton returned to Mary's, but only to retrieve her kittens. The Truitts then called the Angletons (the time is not mentioned). In Rosenbaum's version, it is the Truitts who are entrusted with the diary. In an even more serious difference, the search for the diary occurs five days after the murder. This time the search party includes the Angletons, Tony Bradlee and - making their first appearances - Mary's ex-husband Cord Meyer, and Mary's old college roomie Ann Chamberlain. The search goes on for hours ami

(Probe Vol.
4 #3 p. 8). He was an acquaintance of Peter Lawford's who talked to him a few times about the assassination. Jones' notes from that phone call includes the following:
Lawford told him that Jackie knew right away that shots came from the front as did Powers and O'Donnell. He said shortly after the funeral the family got together.... Bobby told the family that it was a high level military/CIA plot and that he felt powerless to do anything about it.... the family always felt that JFK's refusal to commit to Vietnam was one of the reasons for the assassination....Lawford told him that the kids were all told the truth as they grew up but it was Teddy who insisted that the family put the thing to rest.

Evidently, Teddy wanted to preserve his career in the political arena and knew that any airing of the case would jeopardize it. Which was probably true. Under those circumstances, the Kennedys can't even protect themselves.

This is understandable in human terms. But the compromise allows the likes of Reeves, de Toledano, and Hersh to take the field with confidence. The Kennedys are silent; they won't sue; it must be true. As a corollary, this shows that the old adage about history being written by the victors stands. In this upside down milieu, all the Kennedys' sworn enemies can talk to any cheapjack writer with a hefty advance and recycle another thrashing. Mobsters and those in their employ, CIA officers and their assets, rabid right-wingers et. al. Escorted by these writers, they now do their dances over the graves of the two men they hated most in life and can now revile in

Agency's history knows, in 1974 there was a huge turf war going on between Angleton and Colby (formerly of the Vietnam Phoenix program). Angleton lost this struggle, largely through Hersh's stories. But the week before Hersh's stories were printed, on December 16, 1974, Colby addressed the Council of Foreign Relations on this very subject and admitted to the domestic spying (Imperial Brain Trust p. 61). Why? Because their selective exposure could be used to oust Angleton. Many now believe that Hersh's stories were part of Colby's campaign to oust Angleton, sanctioned by the CIA Director himself.

Next up for Hersh was the story of the downing of KAL 700. This was the curious case of the Korean Air Liner shot down over Russian air space after having drifted off course. Many suspected that, as with the My Lai case, there was more here than met the eye. The long length of time that the plane had been off course, as well as its failure to respond to signals, led some to believe that the Russians had no choice but to shoot down the plane. In fact, many articles appeared, for example in The Nation, to support that thesis. The Reagan administration wanted to portray the inciden

So if the reader wishes to check certain facts, or locate the context of a comment or deduction, he is generally unable to do so. But fortunately, some of us have a background that enables us to find out where certain facts and deductions came from. This is crucial. For in addition to his wild inflation about the prominence of the Kennedy family in the power elite, another of Davis' prime objectives is to reverse the verdict of the Church Committee and place Kennedy in the center of the CIA plots to kill Castro.

Pinning the Plots on Kennedy

As I said in Part One of this article, there is no evidence of such involvement in either t

severable aggression. Chapter VII of the United Nations Charter mandates that the Security Council act immediately and effectively to prevent, repress, and reverse "threats to the peace, breaches of the peace, and acts of aggression." By contrast, from August 2002 through March 2003 the Member States of the U.N. Security Council did not lift one finger to save Iraq from the obviously oncoming U.S./U.K. aggression. Indeed, Security Council Resolution 1441 of 8 November 2002 was originally drafted to facilitate the U.S./U.K. aggression against Iraq by issuing a diktat to Iraqi President Saddam Hussein that was deliberately designed to be almost impossible to comply with.45 Standard operating procedure for the United States government going all the way back to its instigation of the 1898 War against Spain in order to steal the latter's colonial Empire.46

The government of the United States of America commenced the 19th Century by stealing a Western Empire from the American Indians and then ethnically cleansing them - "manifest destiny."47 The American government started the 20th Century by stealing a colonial Empire from Spain and then conducting a near genocidal war against the Philippino People - "a place in the sun." The U.S. government opened the 21st Century by trying to steal a hydrocarbon empire from the Muslim States and Peoples of Eurasia - "a war against international terrorism." But this latest transgression could very well prove to be the definitive step of "imperial overstretch" that will break the back of the American Empire both abroad and at home.48 In 1991 the mighty Soviet Empire collapsed like

at
all to Marilyn or her circle." (Ibid.) This means that he was
likely getting his "information" through a third, unnamed source.
Second, Rothberg's name, and this is part of the sensitive
information referred to above, is exposed in the document. This
is extraordinary. Anyone who has jousted with the FBI or CIA
knows how difficult it is to get "sources and methods" revealed.
In fact this is one of the big battles the ARRB had to fight with
the FBI. Yet in this document, both the method and the source are
open. Third, to my knowledge, Kilgallen never printed anything
specific from the document. Why? Assuming for a moment that the
document is real, probably because she could not confirm anything
in it. But interestingly, right after Kilgallen printed her vague
allusion, Winchell began his steady drumbeat of rumors until, as
Spoto notes, he essentially printed Capell's whole tale (p. 601).
From this, one could conclude that the Angleton memo could be
viewed in two ways. Either it was, as in Newman believes, a
"good" fake, or a false lead planted to begin an orchestrated
campaign. More specifically, Rothberg was either a witting or
unwitting conduit to the media for either Hoover or Angleton (or
both). The quick

has precipitated the current radical
resurgence...." Is one to conclude that Clinton is a radical? Was the Kennedy book a put-up job to place them over the top with their right-wing sponsors? Or do they really find Kitty Kelley credible? Could they really not have known that Priscilla Johnson McMillan was doing the same thing with Kennedy that she had recently done with Oswald in her book Marina and Lee? To put it another way: if your function is to discredit a decade, what better way to do it than to smear the man most responsible for ushering it in?

A Question of Character,
But Not Kennedy's

Which brings us to Thomas Reeves. By the nineties, the negative literature on the Kennedys had multiplied so much that it was possible just to put it all together and make a compendium of it. In 1991, Reeves did just that with his book A Question of Character. It obediently follows the path paved by its noted predecessors. In fact, many of his footnotes are to Davis and to Collier and Horowitz. Although Reeves is another Ph. D., he never questions the faulty methodology I have pointed out. On the contrary, by ignoring the primary sources, he can actually state that JFK authorized the Castro plots, and that John Davis is especially authoritative on the issue (p. 463). Predictably, he completely buys into Exner's book and, like Liz Smith, tries to portray her as a victim of the Kennedy protecting "liberal media" (p. 424). He even endorses the Kitty Kelley 1988 People update of Exner's story, finding no inconsistencies between that and the 1977 installment. And, like Collier and Horowitz, scholar Reeves has no problems using Kelley's book on Jackie Kennedy as a source, although he does add that the tabloid queen's works "must be approached cautiously" (p. 440).

Any scholar who compromises this much, must h

did ask one pertinent question. Namely, why did Exner not tell Demaris these startling details back in 1977? Why did she wait eleven years to bare her soul? Exner says she was afraid and needed to protect herself. Unfortunately, this rings a bit hollow since 1) Giancana and Roselli were both dead when she wrote her book, 2) the Church Committee spilled all the beans on the plots to kill Castro in 1975, which 3) leaves only the Kennedys to fear, and its clear she doesn't give a damn about them.

But for those still skeptical, she adds the other (clinching) reason for breaking the silence: her doctor told her she had terminal cancer and she had only 36 months to live. The article ends in a crescendo that would move even the world weary Claude Rains:
Now that I know I'm dying and nothing more can happen to me, I want to be completely honest. I don't think I should have to die with the secret of what I did for Jack Kennedy, or what he did with the power of his presidency. I feel that I am finally free of the past.

Exner's 1997 Version

I hope Exner sued her doctor, because ten years later she's still with us. She now turns up in the pages of the January 1997 Vanity Fair which, unembarrassed, again bills her as "facing her death."

This time she was teamed with another questionable e

point. They were Tad Szulc, a reporter for the New York Times
Washington bureau, and Sen. George Smathers of Florida. In late
1961, Szulc had been called in to speak with the president at the
request of Richard Goodwin and Robert Kennedy. After a general
discussion of Cuban matters, JFK asked him, "What would you think
if I ordered Castro to be assassinated?" Szulc said he didn't
think it would help foster change in Cuba, and he didn't think
Americans should be associated with such matters. Kennedy
replied, "I agree with you completely." Szulc testified that:
He went on for a few minutes to make the point how strongly
he and his brothers felt that the United States should never
be in a situation of having recourse to assassination.

Szulc's notes of the meeting state:
JFK then said he was testing me, that he felt the same way -
he added "I'm glad you feel the same way" - because indeed
the U. S. morally must not be part (sic) to assassinations.

The Church Committee also heard testimony from Smathers who
stated that once when it was brought up in his presence
(presumably by the CIA friendly Smathers), Kennedy got so mad he
smashed a dinner plate and told him he did want to hear of such
things again (Alleged Assassination Plots p. 124). Smathers
furthered this portrait later when he stated that:
President Kennedy seemed "horrified" at the idea of
political assassination. "I remember him saying. . .that the
CIA frequently did things he didn't know about, and he was
unhappy about it. He complained that the CIA was almost
autonomous. He told me he believed the CIA had arranged to
have Diem and Trujillo bumped off. He was pretty well
shocked about that. He thought it was a stupid thing to do,

And, like Collier and Horowitz, scholar Reeves has no problems using Kelley's book on Jackie Kennedy as a source, although he does add that the tabloid queen's works "must be approached cautiously" (p. 440).

Any scholar who compromises this much, must have an axe to grind. So how ideological is Reeves? He can actually call the Washington Post a liberal newspaper (p. 151). He can use veteran right-wing hit man and Rockefeller agent Victor Lasky as a frequent source. He tries to imply that Lasky's book on JFK, published in 1963, was banned shortly after Kennedy's death by the "liberal media" (p. 3). What he doesn't say is that it was reprinted in 1966.

Reeves' method here is to basically combine the Davis book with the Collier-Horowitz book. From the latter we get ladles of sex and women; from the former the notion that Kennedy was a Cold Warrior no different than Eisenhower or Nixon. Like Davis, Reeves performs gymnastics with the Cuba and Vietnam record in order to proffer this. In fact, Reeves is so intent on pommeling JFK that, at times, he reverses field and actually uses Bruce Miroff's Pragmatic Illus

or half
page group shots or portraits. In the Kennedy book, even the one page of group shots are tiny prints. The rest are wallet-sized head shots that when leafed through, give the impression of mug shots.

The accompanying text is suitable to the photo layout. There seems to me to be both a macro and micro plan to the book. The overall plan is to make Joe Kennedy a sort of manipulating overseer to his sons and, at the same time, make him into a status-seeking iconoclast whose beliefs and sympathies are contra to those of America. The problem with this is dual. First, it is the typical "like father, like son" blanket which reeks of guilt, not just by association, but by birth. Second, the blatant ploy does not stand scrutiny because what makes John and Robert Kennedy so fascinating is how different their politics and economics were from Joe Kennedy's and how fast the difference was exhibited. To use just two examples from JFK's first term in the House, Kennedy rejected his father's isolationist Republican type of foreign policy and opted for a more internationalist approach when he voted for the Truman Doctrine and Marshall Plan. Second, Kennedy voted to sustain Truman's veto of Taft-Hartley which would weaken unions and strengthen American big businessmen-people like his father. From there on in, the splits got wider and wider. It is this father-son dichotomy that none of these books cares to acknowledge let alone explore-which reveals their intent. (An exception is the Blairs' book, which does acknowledge the split on pp. 608-623.)

In their approach to JFK, Collier and Horowitz take up where the Blairs left off. In fact, they play up the playboy angle even more strongly than the Blairs. When Kennedy gets to Washington in 1947, this note is immediately struck with "women's underthings stuffed into the crevices of the sofa" (p. 189) and a "half-eaten hamburger hidden behind boo

were having affairs with Monroe (Slatzer).

Tony, How Could You?

In the Monroe/Kennedys industry, 1985 was a pivotal year. Anthony Summers dove into the quagmire-head first. He published his Marilyn biography, Goddess.

In it, he reveals (shockingly) that he bought into Slatzer. Slatzer is profusely mentioned in both the index and his footnotes. So are people like Haspiel and Jeane Carmen. Carmen is another late-surfacing intimate of Monroe. Carmen professes to have been Monroe's roomie when she lived on Doheny Drive, before she bought her famous home in Brentwood. She began circulating her story after Slatzer did his bit. Of course, Marilyn's neighbors at Doheny, and her other friends, don't recall her (Spoto p. 472). But Summers welcomes her because she provides sexy details about Marilyn's torrid romance with Bobby. A third peg in Summers' edifice is Ralph de Toledano. Summers describes him as a "Kennedy critic" in the paperback version of his book (p. 453). This is like saying that Richard Helms once did some work for the CIA. De Toledano was a former OSS officer who Bill Donovan got rid of because he was too much of a rabid anticommunist. After the war, he hooked up with pr

was intent on giving up documents only in
certain areas. In Watergate terminology, it was a "limited-
hangout" solution to the problem of controlling the damage.

The Escape Route

The issue that had ignited so much public interest in the
hearings had been that of assassination. CIA Director Bill Colby
very clearly drew the line that the CIA had never plotted such
things domestically. Colby's admission was a brilliant tactical
stroke that was not appreciated until much later. First, it put
the focus on the plots against foreign leaders that could be
explained as excesses of anti-communist zealotry (which is
precisely what the drafters of Church's report did). Second, all
probes into the assassinations of JFK, RFK, and MLK would be off-
limits. The Church Committee would now concentrate on the
performance of the intelligence community in investigating the
death of JFK; not complicity in the assassination itself. This
distinction was crucial. As Colby must have understood, the
Agency and its allies could ride out exposure of plots against
Marxists and villains like Castro, Patrice Lumumba of the Congo
and Rafael Trujillo of the Dominican Republic. The exposure of
domestic plots against political leaders would have been lethal.

Colby's gambit, plus the strictures put on the investigation as
outlined by Marchetti above, enabled the intelligence community
to ride out the storm. The path chosen for limited exposure was
quite clever. The most documentation given up by the CIA was on
the Castro assassination plots. Further, the Agency decided to
give up many documents on both the employment of the Mafia to
kill Fidel, and the AM/LASH plots, that is, the enlistment of a
Cuban national close to Castro to try and kill him. Again, not
enough credit has been given to the wisdom of these choices. In
intelligence parlance, there is a familiar phrase: muddying the
waters. This means that by confusing and confou

After Jim Marrs debated Posner on the Kevin McCarthy show in Dallas, he chatted with him. Marrs asked him how he came to do the book. Posner replied that an editor at Random House, one Bob Loomis, got in contact with him and promised him cooperation from the CIA with the book. This explains how Posner got access to KGB turncoat Yuri Nosenko, who was put on a CIA retainer in the late seventies. At the time of Posner-mania, Alan Houston wrote Mr.

Loomis, who also edited the Posner book. In a reply dated 10/27/93, Loomis revealed much about himself:
I have no doubt that you really believe what you are saying, but I must tell you that your letter is one of the best indications I've seen yet as to why the American public has been misled by ridiculous conspiracy theories.

You have proved nothing insofar as I can see, except for the fact that you simply can't see the truth of the situation. My feeling is that it is you and others like you who have perverted the historical record and, in an inexcusable way, pardoned the murderer.

Readers of Probe know that Loomis is not a new pal of the CIA. In our Watergate issue (Vol. 3#2), we wrote about the long, controversial career of journalist James Phelan, a strong supporter of the Warren Commission and harsh critic of Jim Garrison and his "wacky conspiracy theories." Phelan always strongly denied he was compromised in any way. Even when confronted with documents showing connections to government agencies (like the FBI) he still denied it. When Phelan did his book on Howard Hughes-which completely whitewashed the ties of the eccentric billionaire to the CIA-that "instant" book was a top secret project of Random House, handled by Bob Loomis.

Needless to say, Loomis was Hersh's editor at Random House on both his My Lai books. David Halberstam, in The Powers That Be, noted that it was Loomis who put Hersh i

Bradlee's Post via The National Enquirer.

Mary Meyer

Mary Pinchot was the niece of that early conservationist hero Gifford Pinchot. She married CIA officer, and Allen Dulles prot�g�, Cord Meyer. Mary's sister was named Tony and was married to Ben Bradlee. Mary and Cord divorced in 1956 and he later went on to become a CIA - associated reporter for various papers including the Chicago Tribune. In the fall of 1964, while walking along the tow path of the C & O Canal in Georgetown, Mary Pinchot Meyer was murdered by being shot through the face. A suspiciously acting black man was apprehended nearby and was identified by a witness as being the nearest person to Meyer before she was killed. At the trial, the man was acquitted through the efforts of a very good defense attorney, mainly due to the circumstantial nature of the case. Many years after Mary's death, the National Enquirer revealed that she had been a girlfriend of Kennedy.

Before getting into all the details of this story and its aftermath, it is necessary to note a bit about Ben Bradlee's actions in both the Exner and Meyer stories. Bradlee is essential, not just because of his personal involvement in the matters under discussion, but because he was the editor of the Washington Post in 1976 when the Enquirer broke the story. As with the Exner story, once the Meyer story broke, the Post gave it its imprimatur by filling out certain elements of the story and giving it respectable, mainstream play. Thirty five years later, the essentials I have drawn out above are really all that can be known for certain about this tale. All the remaining details are hazy, confusing, or contested. This is not surprising since two of the people involved in shaping the story are CIA counterintelligence chief James Angleton and Ben Bradlee.

Relating to the Kennedy murder, much has been wri

to kid Kennedy about being the scion of a multimillionaire. Kennedy cornered him once on this topic and asked him point blank how much he thought his family was worth. Sahl replied, "Probably about three or four hundred million." Kennedy then asked him how much he thought the Rockefellers were worth. Sahl said he had no idea. Kennedy replied sharply, "Try about four billion." JFK let the number sink in and then added, "Now that's money, Mort."

Throughout the book, Davis tries to convey the feeling of a destined royalty assuming power. So, according to Davis, Kennedy was thinking of the Senate when he was first elected to the House. Then, from his first day in the Senate, he was thinking of the Vice-Presidency (p. 147). Epitomizing this idea, Davis relates a personal vignette about the Kennedy family wake after JFK's funeral. Davis, a cousin of Jackie Kennedy, was leaving the hall and paused to shake hands with Rose Kennedy to offer his condolences (p. 450). Mother Kennedy surprised him by saying in a cool, controlled manner: "Oh, thank you Mr. Davis, but don't worry. Everything will be all right. You'll see. Now it's Bobby's turn." Such coolness differs greatly from what is revealed in the recently declassified LBJ tapes in which, after the assassination, Rose could not even speak two sentences to the Johnsons without dissolving into tears. But the portrait is in keeping with the ruthless monarchy that Davis takes great pains to portray.

As I said above, the main focus is Kennedy's short-lived "dynastic" presidency. And this is where some real questions about Davis' methodology and intent arise. As he does in his assassination book Mafia Kingfish, Davis pr

means that by confusing and confounding the listener with diverse and prolific amounts of information, the main point becomes obfuscated. Since none of the Mafia plots succeeded, one could claim they were ineffectual. The huge amount of publicity garnered by them could eventually be deflected onto the Mob's role in them and not the Agency's. The AM/LASH plots, exposed in even more copious documentation, could be used in a similar way.

If Castro knew about these plots within his midst, couldn't he then claim turnabout and use the same tactics by employing a Communist in the U.S. to kill Kennedy? This, or a combination of the two, has been what suspect writers like Jean Davison and Jack Anderson have been foisting on the public for years.

The Establishment Takes Some Hits

The political fallout from the Church Committee was quite intense. The CIA took quite a few hits, though it emerged intact.

Eastern Establishment-GOP mainstay Allen Dulles was implicated in the authorization of two assassination plots (Lumumba and Castro). Even Republican icon Dwight Eisenhower was implicated: The chain of events revealed by the documents and testimony is strong enough to permit a reasonable inference that the plot to assassinate Lumumba was authorized by Pres

did not cooperate with him. In
return, Hersh promised not to name St. George and to run the
completed article by them first. St. George kept his side of the
deal. Hersh broke his. St. George was named in the piece twenty-
three times.

But there is another aspect to this story not mentioned by Anson.
When St. George did publish a piece on Watergate in Harper's, it
was based on his talks with another Watergate burglar, Eugenio
Martinez. It gave strong indications of the CIA's role in
Watergate, and that Howard Hunt was a double agent inside the
Nixon camp. A few years later, in High Times (April 1977) sans
Hersh, Sturgis now spoke. He depicted Watergate as a war not with
Sam Ervin and the Post on one side and Nixon on the other; but as
the CIA versus Nixon. None of this was in Hersh's piece, which
presented the typical White House-funneling-"hush money"-to-the-
burglars story which could have been written by Woodward.

Next for Hersh were his exposures in the New York Times of CIA
counter intelligence chief James Angleton's domestic operations.
Domestic ops were banned by the CIA's original charter, although
they had been done ever since that Agency's inception. But at
Christmas, 1974, Hersh's stories were splashed all over the
Times.

I agree that carbon comp resistors have better alternatives if you are looking for accuracy and stability and low noise. OTOH, carbon comp resistors are an excellent choice for pulse generators and shaping networks. A metal film resistor will exhibit inductance and will often arc across its trim line, usually with catastrophic results. You can hit a 2-watt carbon comp resistor with repetitive pulses of hundreds of watts (peak, keeping the duty cycle low) many times without significant resistance shift and certainly without catastrophic failure.

The carbon comps are not the choice for all circuits, but they still have their merits.

It's worse than a troll; it's one of the so-called "HipCrime" spammers
flooding news.admin.net-abuse.email and unrelated newsgroups, trying
to start a cross-newsgroup flamewar *and* flooding the groups to the
extent that they're no longer useful.

If your provider (and my news server provider) used CleanFeed, we'd
never see any of the HipCrime posts. *sigh*

Wrong flavor anchors; this newsgroup is about "boatanchor" _radios_:
big, heavy, old tube radios that weigh enough to keep my 24' pontoon
boat in place in a high wind and 6' waves. One of the most famous
weighs in at 85 pounds, and it's by no means the heaviest.

G'day Art, don't worry about BOG (as he is also known), he has a bee in his
bonnet about the "proper" use (i.e. traditional English) of the English
language - he is always trying to get people to use "metre" rather than
"meter" when referencing frequencies or lengths. He really is a tool, but
most people just ignore him.

Matt

1. Something that has to be kept in mind is that most "carbon" resistors
being sold today are "carbon film", not "carbon composition" and
won't stand repetitive surge pulses.

2. IIRC, a mil-spec "10%" carbon comp can vary 42.4% over its life and still meet spec. Expect commercial parts to be worse.

3. There are ceramic composition resistors available that have all the good properties of carbon comp (except, I'm sure, cost) with none of the bad properties.

I'm looking for a replacement mic element for an
old style unamplified D-104.
Does anyone know of a source?

73, Ron

Ron,

Yes. Mouser has Kobitone crystal and ceramic Hi-Z microphone elements that
have been successfully used by other D-104 owners for replacement.

These can be found in their on-line catalog (Adobe Acrobat) on page 1136
(lower right of that page). Specification of the elements (diameters,
impedance, etc.) are shown:
http://www.mouser.com/catalog/620/1136.pdf

>just fine?

Drifting by 20% or so wouldn't bother most radio circuits.
But we've all found old resistors with DOUBLE or even 4x the original value,
which really damps down a tube's performance in the cathode or screen circuit.

If you use carbon-comp replacements (same type as original), who's to say that
in 20 or 390 years they won't double again? You should fix a BA to stay fixed.

The ideal resistors for abusive, high-speed transient applications are the silicon carbide (ceramic) resistors (think Carborundum / Cesewid or whatever they call themselves now). But the carbon comp resistors are much cheaper, more versatile (lots more resistance values) and easier to use.

I don't know what you mean by the "life" of a carbon comp resistor. My experience is that they last forever, until you kill them somehow. Drift, under low power, hasn't been a problem for me. I have never seen 40% drifts, except for very abused parts, and if you are using the 2-watt carbon comps, you can hear or smell when you are abusing them.

The silicon carbide resistors can be pushed so hot that you can use them as room heaters, industrial furnace elements or infrared sources. Oxidation of the plated silver terminals is a small problem. Also, they do have a temperature dependent coefficient of resistance (not as bad as incandescent light bulbs).

I agree about the carbon film resistors; they blow up about the same as the metal film resistors.

You apparently don't play with many old 30s-40s sets. Finding half the
high-value resistors only 200% out of whack would be a good day.

I put a Heil element in mine. I had to do a little padding with foam rubber.

The Heil is not high level like the original element, but works great with modern rigs.

Open port/unsecured box.

It's either a wanker called Dippy or Hipcrime or a dipclone thereof.
Basically the luser wants to disrupt nan-as by posting off-topic " sporgeries"
to other groups with a followup back here. Currently dippy has his knickers in
a twist since most folk here have advanced filtering or use services such as
supernews that quickly filter most of the crap.

I've found Hamster works well, you wind up running your own local news spool
though. And it's not the least trivial thing to get set up.

This is a good site to start reading about hamster and nfilter
http://web.ukonline.co.uk/davidgb/x_setup11.html

Have a happy,

in Massachusetts. In
fact, in his book Conversations With Kennedy, there is a charming subtext by Bradlee implying that Kennedy comes from a high social strata to which Bradlee can't relate. For instance, Bradlee makes Kennedy out to be a fashion plate, changing shirts two or three times a day. Bradlee has to remind him that common folk sometimes wear the same shirt two days in a row. Like he does. When he and Kennedy are talking about the tax code, they commiserate over there not being enough tax breaks for middle class people like Bradlee.

Having swallowed this, I was surprised to learn that Bradlee's family spent each summer with the Astors in Maine (the Astor Foundation owned Newsweek which is how Bradlee got started there); that one of Bradlee's early mentors was Walter Lippmann, that fabled adviser to presidents and confidant of OSS chief Bill Donovan; that on his father's side, the Bradlees went back five generations at Harvard. That his father married into the law firm of Cravath, Swain & Moore, John McCloy's firm. In other words, Bradlee was Boston Brahmin all the way. David Halberstam once described a typical Saturday morning in the Bradlee household as follows: 9:00 AM - French lesson, 10:00 AM - piano recital, 11:00 AM - horseback riding, 12:00 AM - ice skating. Bradlee's first marriage was into another wealthy Massachusetts family, the Saltonstalls. Bradlee may or may not have succeeded in deceiving Kennedy about who he was (I hope not). But the fact that he fee

of modern history. With people like Davis
translating for them, RFK does not pursue Giancana, they are
actually pals in MONGOOSE. The Kennedys agree with the Joint
Chiefs: we should invade Cuba. And then escalate in Vietnam.
Disinformation feeds on disinformation, and whatever the record
shows is shunted aside as the tabloid version becomes "accepted
history," to use Davis' phrase (p. 290). The point of this
blurring of sources is that the Kennedys, in these hands, become
no different than the Dulles brothers, or Nixon, or Eisenhower.
In fact, Davis says this explicitly in his book(pp. 298-99). As
I noted in the last issue, with Demaris and Exner, the Kennedys
are no different than Giancana. And once this is pounded home,
then anything is possible. Maybe Oswald did work for Giancana.
And if RFK was working with Sam, then maybe Bobby unwittingly had
his brother killed. Tragic, but hey, if you play with fire you
get burned. Tsk. Tsk.

But beyond this, there is an even larger gestalt. If the Kennedys
were just Sorenson-wrapped mobsters or CIA officers, then what
difference does it make in history if they were assassinated? The
only people who should care are sentimental Camelot sops like
O'Donnell and Powers who were in it for a buck anyway. Why waste
the time and effort of a new investigation on that. For the CIA,
this is as good as a rerun of the Warren Commission, since the
net results are quite similar. So its no surprise to me that the
focus of Hersh's book has shifted between Oswald did it for the
Mob, and an all out trashing of the Kennedys.

The standard defense by these purveyors is th

Texas Monthly which in turn
got him a guest spot on Nightline.) This is also when Leary began hooking up with Gordon Liddy, doing carnival-type debates across college campuses, an act which managed to rehabilitate both of them and put them both back in the public eye.

There is another problem with Leary's book: the Phil Graham anecdote. In his book, Leary has Mary tell him that the cat was out the bag as far as her and JFK were concerned. The reason was that a well-known friend of hers had blabbed about them in public. This is an apparent reference to Post owner Phil Graham's outburst at a convention in Phoenix, Arizona in 1963. This famous incident (which preceded his later alleged mental breakdown) included - according to Leary - a reference to Kennedy and Mary Meyer. The story of Graham's attendance at this convention and what he did and said has been described in different ways in different books. Unfortunately for Leary, his dating of the convention does not jibe with any that I have seen. In 1986, Tony Chaitkin tracked down the correct date, time, and place of the meeting. No one had done it correctly up to that time. But Chaitkin and his associates went one step further. They interviewed people who were there. None of the attendees recalled anything said about Mary Meyer.

To me, this apocryphal anecdote and Leary's book seem ways to bolster a tale that needed to be recycled and souped up before its chinks began to show. Leary's reason for being a

she had been with no one
else during the whole time, "not ever" she assures us. Trying to
remain a gentleman, I will only refer the reader to approximately
the second half of the book, which details a rather active social
life on her part.

Finally, what raises this latest revelation to a jocular level is
Exner's description of Kennedy's reaction to her pregnancy when
she informs him of the news. Again, let us use Exner's own words
as quoted by Smith:
So Jack said, "Do you think Sam would help us? Would you ask
Sam? Would you mind asking?" I was surprised, but said I'd
ask. So I called Sam and we had dinner. I told him what I
needed. He blew sky-high. "Damn him! Damn that Kennedy." He
loved to be theatrical, and he always enjoyed picking on
Jack.

Smith/Herodotus was so carried away by that cute, cuddly Italian
mobster that she never bothered to ponder the fact that
zillionaires in America have always had quiet, discreet ways to
solve such personal problems. How about a private jet to a
secretive Swiss clinic? They don't need Mafia chieftains to help
them. Especially one with six FBI agents following him around
ready to squeal on Kennedy the minute Hoover wants them to.

Say That Again Please

There is one revelation in the article that does not come off
tongue-in-cheek.

After talking to Smith's pal Hersh, Exner calls Smith back. She
states that the Kennedy-Giancana talks could be released under
the JFK Act. She then adds: "I hope they will. The government
wants me to talk again." [Emphasis add

were from Joe Kennedy's and how fast the difference was exhibited. To use just two examples from JFK's first term in the House, Kennedy rejected his father's isolationist Republican type of foreign policy and opted for a more internationalist approach when he voted for the Truman Doctrine and Marshall Plan. Second, Kennedy voted to sustain Truman's veto of Taft-Hartley which would weaken unions and strengthen American big businessmen-people like his father. From there on in, the splits got wider and wider. It is this father-son dichotomy that none of these books cares to acknowledge let alone explore-which reveals their intent. (An exception is the Blairs' book, which does acknowledge the split on pp. 608-623.)

In their approach to JFK, Collier and Horowitz take up where the Blairs left off. In fact, they play up the playboy angle even more strongly than the Blairs. When Kennedy gets to Washington in 1947, this note is immediately struck with "women's underthings stuffed into the crevices of the sofa" (p. 189) and a "half-eaten hamburger hidden behind books on the mantel" (Ibid). The problem here is there is no source given for the first observation and the hamburger is sourced to none other than CIA-Washington Post crony Joe Alsop, the man who, as Don Gibson pointed out, talked LBJ into forming the Warren Commission (Probe Vol. 3 #4 pp. 28-30).

This is typical of the book's low scholarly standard. Both authors have advanced degrees from Cal Berkeley. Both had done some solid academic work in their Ramparts days. Yet neither has any qualms about the Exner or Mary Meyer stories. In fact they both jump on the Timothy Leary addition to the latter (p. 355).

This tabloid approach allows them to use none other than Kitty Kelley on Jackie's reaction to Kennedy's supposed White House affairs. Consider the following excerpt ba

And the things Summers
leaves out are as important as what he puts in. For instance, he omits the facts that her psychiatrist did not know the drugs that her internist was prescribing; the weird nature and background of her house servant Eunice Murray; and her pending reconciliation with Joe DiMaggio which, of course, makes her "torrid romance" with Bobby even more incredible. The reconciliation makes less credible Summers' portrait of an extremely neurotic Monroe, which he needs in order to float the possibility that she was going to "broadcast" her relationship with the Kennedys.

Summers' book attracted the attention of Geraldo Rivera at ABC's 20/20. Rivera and his cohort Sylvia Chase bought into Goddess about as willingly as Summers bought Slatzer. They began filing a segment for the news magazine. But as the segment began to go through the editors, objections and reservations were expressed. Finally, Roone Arledge, head of the division at the time, vetoed it by saying it was, "A sleazy piece of journalism" and "gossip-column stuff" (Summers p. 422). Liz Smith, queen of those gossip-columnists, pilloried ABC for censoring the "truth about 1962." Rivera either quit or was shoved out by ABC over the controversy. Arledge was accused by Chase of "protecting the Kennedys" (he was a distant relative through marriage). Rivera showed his true colors by going on to produce syndicated specials on Satanism and Al Capone's vaults (which were empty). He is now famous for bringing tabloidism to television. Arledge won the battle. Rivera and Liz Smith won the war. Until 1993.

The Truth About Marilyn

In 1993, Donald Spoto wrote his bio of Monroe. After reading the likes of Haspiel, Slatzer and Summers, picking up Spoto is

the first person to identify Ruby. He then began
interviewing witnesses and got especially close to Ruby's
lawyers. The authors are especially thankful to Elmer Gertz, the
same Gertz who has been revealed in the last two issues of Probe
as a lawyer for CIA agent Gordon Novel whose attorneys were
"clandestinely remunerated" for their services. Gertz also wrote
a book on Ruby. It is an equally gaseous whitewash that also goes
out of its way to attack the critics, again singling out Mark
Lane.

To make the picture complete, in his prologue to the Exner book,
Demaris writes about his new task at hand:
Legends are not easily surrendered. The press will fight to
preserve its manufactured illusions, its Camelots and Good Ships
Lollipop, and God help anyone who inadvertently threatens them.

God, or rather the Washington Post and a good review from the New
York Times, helped them to the tune of over 145,000 books sold,
including a mass market paperback sale. Demaris later adds,
characterizing the book

other pro-Israeli Neo-Cons inhabiting the Bush
Jr. administration. These pro-Israeli Neo-Cons had been schooled in the
Machiavellian/Nietzschean theories of Professor Leo Strauss who taught
political philosophy at the University of Chicago in its Department of
Political Science. The best expos&#65533; of Strauss's pernicious theories on
law, politics, government, for elitism, and against democracy can be
found in two scholarly books by the Canadian Professor of Political
Philosophy Shadia B. Drury.2 I entered the University of Chicago in
September of 1968 shortly after Strauss had retired. But I was trained
in Chicago's Political Science Department by Strauss's foremost prot&#65533;g&#65533;,
co-author, and later literary executor Joseph Cropsey. Based upon my
personal experience as an alumnus of Chicago's Political Science
Department (A.B., 1971, in Political Science), I concur completely with
Professor Drury's devastating critique of Strauss. I also agree with her
penetrating analysis of the degradation of the American political
process that has been inflicted by Chicago's Straussian Neo-Con cabal.3

The University of Chicago routinely trained me and innumerable other
students to become ruthless and unprincipled Machiavellians. That is
precisely why so many neophyte Neo-Con students gravitated towards the
University of Chicago or towards Chicago Alumni at other universities.
Years later, the University of Chicago became the "brains" behind the
Bush Jr. Empire and his Ashcroft Police State. Attorney General John
Ashcroft received his law degree from the University of Chi

picked it up. There
had been an apparent falling out between Truitt and Bradlee and
Truitt said that he wanted to show that Bradlee was not the
crusader for truth that Watergate or his book on Kennedy had made
him out to be. In the National Enquirer, Truitt stated that Mary
had revealed her affair with Kennedy while she was alive to he
and his wife. He then went further. In one of their romps in the
White House, Mary had offered Kennedy a couple of marijuana
joints, but coke-sniffer Kennedy said, "This isn't like cocaine.
I'll get you some of that."

The chemical addition to the story was later picked up by drug
guru Tim Leary in his book Flashbacks. Exner-like, the angle grew
appendages. Leary went beyond grass and cocaine. According to
Leary, Mary Meyer was consulting with him about how to conduct
acid sessions and how to get psychedelic drugs in 1962. Leary met
her on several occasions and she said that she and a small circle
of friends had turned on several times. She also had one other
friend who was "a very important man" who she also wanted to turn
on. After Kennedy's assassination, Mary called Leary and met with
him. She was cryptic but she did say, "They couldn't control him
any more. He was changing too fast

so prevalent that, as many have
noted, tabloid sales in the U.S. have declined of late because the mainstream media have now bowed to these tendencies so much that much of their news has seeped over, thereby blurring the lines between the two. In my view, some of the milestones in this trend have been examined in this article: in the nonfiction book field it would be the Collier-Horowitz book; in magazine journalism, the Kitty Kelley article on Exner; in television, the 1985 Rivera controversy about Summers' book.

This blurring of tabloid and journalistic standards inevitably leads to a blurring of history. With people like Kelley, Rivera, and Exner commenting, the Kennedys get inserted into a giant Torbitt Document of modern history. With people like Davis translating for them, RFK does not pursue Giancana, they are actually pals in MONGOOSE. The Kennedys agree with the Joint Chiefs: we should invade Cuba. And then escalate in Vietnam. Disinformation feeds on disinformation, and whatever the record shows is shunted aside as the tabloid version becomes "accepted history," to use Davis' phrase (p. 290). The point of this blurring of sources is that the Kennedys, in these hands, become no different than the Dulles brothers, or Nixon, or Eisenhower. In fact, Davis says this explicitly in his book(pp. 298-99). As I noted in the last issue, with Demaris and Exner, the Kennedys are no different than Giancana. And once this is pounded home, then anything is possible. Maybe Oswald did work for Giancana. And if RFK was working with Sam, then maybe Bobby unwittingly had his brother killed. strongly denied he was compromised in any way. Even when confronted with documents showing connections to government agencies (like the FBI) he still denied it. When Phelan did his book on Howard Hughes-which completely whitewashed the ties of the eccentric billionaire to the CIA-that "instant" book was a top secret project of Random House, handled by Bob Loomis.

Needless to say, Loomis was Hersh's editor at Random House on both his My Lai books. David Halberstam, in The Powers That Be, noted that it was Loomis who put Hersh in contact with St. George and Sturgis during Watergate (p. 681). According to his secretary, Loomis worked closely with Hersh on The Target Is Destroyed. Certainly, one of the most ridiculous statements made by Hersh would be music to Loomis' ears. Hersh's Holy Grail on the assassination conspiracy, the cinching piece of the puzzle, would be "a reel of tape of Oswald getting briefed by Giancana" (Anson p. 120). With what serious people have learned about Oswald today, through work by Phil Melanson, John Newman, and John Armstrong, this is preposterous. The Blakey-Davis whim about the Mafia hiring a "hit man" who couldn't hit the side of a barn and used a $12.95 bolt action rifle to do the job, went out the window when the HSCA closed down. But "crack" reporter Hersh still buys into it. As he does the idea that Sirhan killed Bobby Kennedy, proven by the fact that he wrote a blurb praising Dan Moldea's 1995 whitewash of that case.

Behind all the sordid details of these articles there is a bigger picture to be outlined. One of the main parts of it is the increasing ascendancy of tabloid journalism into the major media outlets, and with it, its concomitant attachment to the lives of celebrities. More often than not, that translat

of his presidency. I feel that I
am finally free of the past.

Exner's 1997 Version

I hope Exner sued her doctor, because ten years later she's still with us. She now turns up in the pages of the January 1997 Vanity Fair which, unembarrassed, again bills her as "facing her death."

This time she was teamed with another questionable expert on Kennedy's Cuba policy - Hollywood gossip columnist Liz Smith. And evidently, the previous fear of death wasn't enough to squeeze the whole story out of her. She still has a few goodies to add.

The choice of Smith in 1997 is as revealing as Demaris in 1977 and Kelley in 1988. Smith writes for the New York Post, which is literally a tabloid in both format and approach. Like Kelley, Smith is a big fan of Sy Hersh. In fact, her column has released several "teaser" items about his upcoming book. In the past she has also flacked for Tony Summers. What do those two writers have that other Kennedy researchers, say John Newman, do not? They have both pushed the angle that the Kennedys were somehow involved with the death of Marilyn Monroe. Smith dutifully mentions both authors in her Vanity Fair piece and writes, as fact, that RFK was at Marilyn's the day she died. Exner herself claims that Summers has offered to supply a new "foreword should she write another book" and Smith sent Exner to see Hersh who, predictably, also endorses her sto

published in the New York Times (11/16/63), so Davis could have easily found it had he been looking.

In light of this selective presentation of the record on Vietnam, plus the acrobatic contortions performed on the Church Committee report, one has to wonder about Davis' intent in doing the book.

I question his assertion that when he began the book he "did not have a clear idea where it would lead." (p. 694) So I was not surprised that in addition to expanding Exner's story, he uncritically accepted the allegations about Mary Meyer and Marilyn Monroe (pp. 610-612). As the reader can see, in the three areas outlined at the beginning of this essay, Davis hit a triple. In all the threads, he has either held steady or advanced the frontier. It is interesting in this regard to note that Davis devotes many pages to JFK's assassination (pp. 436-498). He writes that Kennedy died at the "hands of Lee Harvey Oswald and possible co-conspirators" (p. 436). Later, he will write that Sirhan killed Bobby Kennedy (p. 552). Going even further, he can state that:
It would be a misstatement, then, to assert that Deputy Attorney General Katzenbach and the members of the Warren Commission...consciously sought to cover up evidence pertaining to the assassination of John F. Kennedy. (P. 461)

As the declassified record now shows (Probe Vol. 4 #6 "Gerald Ford: Accessory after the Fact") this is just plain wrong. Davis then tries to insinuate any cover-up was brought on by either a backfiring of the Castro plots (Davis p. 454) or JFK's dalliance with Exner (p. 498). As wrongheaded and against the declassified record as this seems, this argum

Summers used the Collier and Horowitz book for Goddess. He even uses Priscilla McMillan to connect JFK with Monroe! (p. 244) Will Liz Smith call him on this? Will Ben Bradlee? Far from "protecting the Kennedys" the establishment shields these writers from potentially devastating critiques. The reason being that the Kennedys were never part of that establishment. No one protected JFK in Dallas. No one protected RFK in Los Angeles. The ensuing investigations did everything they could to protect the true murderers; to hell with the victims. And since the Church Committee showed in public that the Kennedys were not business as usual, there has been an intense and incessant effort to reverse that verdict; in essence to rewrite history. People like Slatzer, Davis, and now Hersh have made their living off of it.

The Kennedys themselves deserve part of the blame. In Samuels' article in The New Yorker, Kennedy family lawyer Myer Feldman says that he advised the Kennedys not to even comment on Hersh, let alone sue (p. 69). If I were advising, I would have urged a lawsuit as far back as 1984 with both the Collier-Horowitz book and the Davis book. I would have loved to hear

this book is about. It
takes JFK from his days at the exclusive Choate School in
Connecticut to his first term as a congressman i.e. from about
1934 through 1947. I don't understand how comparing the political
fallout from Watergate with an examination of Kennedy's youthful
years constitutes a politically valid analogy. Third, the Blairs
seem a bit behind the curve on Nixon. If they wanted to find out
the "truth" about Nixon all they had to do was examine his
behavior, and some of the people he employed, in his
congressional campaign against Jerry Voorhis, his senatorial
campaign against Helen Douglas and, most importantly, his
prosecution of Alger Hiss. These all happened before 1951, two
decades before Watergate. Nothing in JFK's political career
compares with them.

The book's ill-explained origin is not its only problem. In its
final form, it seems to be a rush job. I have rarely seen a
biography by a veteran writer (which Clay Blair was) so poorly
edited, written, and organized. Th

category forever
by reducing it to tabloid standards. Significantly, the article was entitled "The Dark Side of Camelot," a phrase used by Ron Rosenbaum (who will be discussed later) and the title of the upcoming book by Sy Hersh, of whom Kelley is a great admirer. In this new version, Exner now said that she was seeing Sam Giancana at Kennedy's bidding. She even helped arrange meetings between JFK and Giancana and JFK and Roselli. Some of the meetings took place at 1600 Pennsylvania Avenue. Why would Kennedy need personal consultation with gangsters like Sam and John? To cinch elections on his ruthless way to the White House and later to arrange the liquidation of Castro. Kelley adds that the latter meetings were done for operation MONGOOSE. But Exner's time sequence does not jibe with the lifespan of that operation and, as the record shows, Castro's assassination was not on the MONGOOSE agenda. In spite of that explicit record, Kelley adds that historians have never been able to pinpoint Kennedy's role in those plots, thereby ignoring the abundant evidence unearthed by the Church Committee which says he had none. Nevertheless, Kelley and Exner will now exhume the hidden history of those times for People. Let's examine their excavation.

Exner says that Kennedy needed help in West Virg

any more of these types of ideas about using these characters,
they would have to go through the Justice Department first, i.e.

him. But what RFK did not know is that, as the I. G. Report
states:
It should be noted that the briefing of Kennedy was
restricted to Phase One of the operation, which had ended
about a year earlier. Phase Two was already underway at the
time of the briefing, but Kennedy was not told of it.

In fact, on the same day that RFK was briefed, the CIA's
Sheffield Edwards (one of the briefers) along with William Harvey
agreed to falsify the record by saying all future plots had to be
authorized by the Director of the CIA. They weren't. John McCone
was deliberately kept out of the loop by Richard Helms and
Harvey. Harvey admitted to the Church Committee that the Edwards
memo was a deliberately false record, a cover story. In fact,
Harvey had already taken over the plots when Edwards told Robert
Kennedy they were terminated.

JFK Never Authorized Them

"bombshell" about Jackie, namely that
JFK's affairs drove her to electroshock therapy.

Many of the sexual anecdotes go unsourced, but there is one that
is footnoted that is quite revealing. The authors use it as a
coda to a chapter on Jack's early years in the House. This
passage synthesizes the image they wish to depict: Kennedy as the
empty vessel of his father who had his role as politician forced
on him after Joe Junior's death and who now uses sex as a release
from his own vacuity. It deserves to be quoted at length:
The whole thing with him was pursuit. I think he was
secretly disappointed when a woman gave in. It meant that
the low esteem in which he held women was once again
validated....I was one of the few he could really talk
to....During one of these conversations I once asked him why
he was doing it-why he was acting like his father...why he
was taking a chance on getting caught in a scandal.... He
took awhile to formulate an answer. Finally he shrugged and
said, "I don't know, really, I guess I just can't help it."
He had this sad expression on his face. He looked like a
little boy abou

the future of the world's economy.
What my teacher, mentor, and later friend, the late and great Professor Hans Morgenthau once denominated as "unlimited imperialism"27 in his classic work Politics Among Nations.

Of course, the Bush Sr. war against Iraq for oil in 1991 was the first battle in this U.S. quest for world economic hegemony. To the same effect were the Bush Sr. invasion of Somalia;28 the Clinton/Bush Jr. military intervention into Colombia;29 Bush Jr.'s support for the anti-Chavez coup in oil-rich Venezuela;30 the post-9/11 U.S. military intervention into and occupation of Djibouti in order to control the Suez Canal/Persian Gulf oil route to Europe, and also to obtain direct military access to the oil and natural gas resources around the Horn of Africa; the August 2003 U.S. military intervention into Liberia, once again to grab direct military access to the oil and natural gas resources located off and on the West Coast of Africa;31 etc. Whatever the public rhetoric or justification might be, the fact of the matter is that if the reader looks at a map of the world, the United States government has its military, paramilitary, and covert forces converging upon and/or threatening almost every country in the world that possesses significant quantities of oil or natural gas, as well as their transportation supply-lines and the latter's choke-points. Many of these energy-resource-rich countries just happen to be Muslim. That is what Huntington's "Clash of Civilizations" was really all about.32 Our clash, their civilization. After September 11th, Bush Jr. himself proudly boasted that he was going on a Crusade. Certainly t

" But what makes this (lengthy) aspect of the
book interesting is that when the Blairs ask some of Kennedy's
girlfriends what his "style" was (clearly looking for juicy sex
details), as often as not, the answer is surprising. For
instance, in an interview with Charlotte McDonnell, she talks
about Kennedy in warm and friendly terms adding that there was
"No sex or anything" in their year long relationship (p. 81).

Another Kennedy girlfriend, the very attractive Angela Greene had
this to say:
Q: Was he romantically pushy?
A: I don't think so. I never found him physically
aggressive, if that's what you mean. Adorable and sweet. (p.
181)

In another instance, years later, Kennedy was dating the
beautiful Bab Beckwith. She invited Kennedy up to her apartment
after he had wined and dined her. There was champagne and low
music on the radio. But then a news broadcast came on and JFK
leaped up, ran to the radio, and turned up the volume to listen
to it. Offended, Beckwith threw him out.

Another curious observation that the book establishes is that
Kennedy did not smoke and was only a social drinke

to keep Ramparts afloat
(p. 275). This is how they got in contact with the younger generation of that clan. So when the magazine fell, they went to work on the family biography with access to people and papers that no outside, nonofficial authors had before. It is interesting that, in 1989, the authors wrote that when they started the Rockefeller book, they were expecting to excavate an "executive committee of the ruling class" and thereby unlock the key to the American power elite. But they found that they only ended up writing about American lives (Ibid). They ended up with that result because that seems to have been the plan all along.

Towards the end of the book, the authors strike a rather wistful note, a sort of elegy for a once powerful family that is now fading into the background (The Rockefellers, p. 626). This is extraordinary. Consider some of the things the Rockefellers accomplished in the seventies: they were part of the effort to quadruple gasoline prices through their oil companies; David Rockefeller took part in the effort to get the American government to intervene in Chile in 1973; the Trilateral Commission, which the Rockefellers sponsored, funneled many of its members into the Carter administration; in 1979, Henry Kissinger and David Rockefeller convinced Carter to let the Shah of Iran into the country for medical treatment. The reaction in Iran helped give us Reagan-Bush. The rest, as they say, is history.

In comparing the two books, one is immediately struck by a difference in

retrospect, the recurring intervals of Exner's appearances are suggestive. Although the Post surfaced her in 1975, her book did not come out until two years later, on the fifteenth anniversary of Kennedy's assassination. The 1988 People version - boosted by two Times stories previewing its release - seems done to get the jump on other stories for the 25th anniversary (as we shall see, Ron Rosenbaum filled this role for the 20th anniversary). The latest edition, with Exner aware of the JFK Act, was done at the beginning of what was originally to be the last year of the Review Board. Smith wrote the piece before the extra year was granted by Congress. Smith's friendliness with Hersh, seems to further this. For according to the ARRB's original timetable, the Vanity Fair piece would arrive at the beginning of its last year and Hersh's attack book in October, right when the Review Board was originally set to shut down. This would make a nice pincers movement with which to smother the Board's serious and blockbuster work amid sexy smears about abortions and Marilyn Monroe (Hersh).

In historical perspective, the Times and Safire, and the Post and Ben Bradlee (who, as we shall see, also embraced Exner) opened the flood gates to all kinds of National Enquirer type stories about JFK's private life. Rumors about Monroe, numerous secretaries, these all started to get tossed about. A prominent one about to be recycled emerged just a year after Exner. It was promulgated again by Bradlee's Post via The National Enquirer.

Mary Meyer

Mary Pinchot was the niece of that early conservationist hero Gifford Pinchot. She married CIA officer, and Allen D

back
through Judith Exner.

But the plots against Castro took center stage. They seemed full of sensational, fantastic revelations that seemed right out of a James Bond movie: poison pills, exploding sea shells, contaminated diving suits etc. But no matter how hard they tried, the media moguls (New York Times, Washington Post, Los Angeles Times) could not tie the Kennedys to them. This didn't seem fair in light of all the mud heaped on Eisenhower, Dulles and the Watergated Nixon. Unfortunately, not even the CIA's 1967 Inspector General's report, commissioned by Richard Helms for LBJ, implicated the Kennedys.

No Authorization

The Inspector General's Report (which is quite thorough and methodical), and the Church Committee's report dealing with assassinations (entitled Alleged Assassination Plots Involving Foreign Leaders) are both quite clear on this point. For instance, when the former report was analyzing the published details of a Drew Pearson-Jack Anderson 1967 leak about the Castro plots, it labeled the Pearson-Anderson insinuation about Robert Kennedy's "approval" of the plots as "Not true." It later goes on to say that the role played by Robert Kennedy in Pearson's story is "a garbled account." What had happened was that through the FBI's discovery of a wiretapping favor done for Maheu's contact in the plots (Chicago mobster Sam Giancana) Hoover had learned of the CIA-Mob link and forwarded his knowledge to Robert Kennedy. Kennedy

and sympathies are contra
to those of America. The problem with this is dual. First, it is the typical "like father, like son" blanket which reeks of guilt, not just by association, but by birth. Second, the blatant ploy does not stand scrutiny because what makes John and Robert Kennedy so fascinating is how different their politics and economics were from Joe Kennedy's and how fast the difference was exhibited. To use just two examples from JFK's first term in the House, Kennedy rejected his father's isolationist Republican type of foreign policy and opted for a more internationalist approach when he voted for the Truman Doctrine and Marshall Plan. Second, Kennedy voted to sustain Truman's veto of Taft-Hartley which would weaken unions and strengthen American big businessmen-people like his father. From there on in, the splits got wider and wider. It is this father-son dichotomy that none of these books cares to acknowledge let alone explore-which reveals their intent. (An exception is the Blairs' book, which does acknowledge the split on pp. 608-623.)

In their approach to JFK, Collier and Horowitz take up where the Blairs left off. In fact, they play up the playboy angle even more strongly than the Blairs. When Kennedy gets to Washington in 1947, this note is immediately struck with "women's underthings stuffed into the crevices of the sofa" (p

Marina and Lee? To put it
another way: if your function is to discredit a decade, what
better way to do it than to smear the man most responsible for
ushering it in?

A Question of Character,
But Not Kennedy's

Which brings us to Thomas Reeves. By the nineties, the negative literature on the Kennedys had multiplied so much that it was possible just to put it all together and make a compendium of it. In 1991, Reeves did just that with his book A Question of Character. It obediently follows the path paved by its noted predecessors. In fact, many of his footnotes are to Davis and to Collier and Horowitz. Although Reeves is another Ph. D., he never questions the faulty methodology I have pointed out. On the contrary, by ignoring the primary sources, he can actually state that JFK authorized the Castro plots, and that John Davis is especially authoritative on the issue (p. 463). Predictably, he completely buys into Exner's book and, like Liz Smith, tries to portray her as a victim of the Kennedy protecting "liberal media" (p. 424). He even endorses the Kitty Kelley 1988 People update of Exner's story, finding no inconsistencies between that and the 1977 installment. And, like Collier and Horowitz, scholar Reeves has no problems using Kelley's book on Jackie Kennedy as a source, although he does add that the tabloid queen's works "must be approached cautiously" (p. 440).

Any scholar who compromises this much, must have an axe to grind. So how ideological is Reeves? He can actually call the Washington Post a liberal newspaper (p. 151). He can use veteran right-wing hit man and Rockefeller agent Victor Lasky as a frequent source. He tries to imply that Lasky's book on JFK, published in 1963, was banned shortly after

Iraq; and next North Korea, or Iran, or Syria?
Can World War III be far behind? On 18 June 2003 the Bush Jr. administration illegally attacked and invaded but withdrew from Syria.43 There is no international legal doctrine justifying "hot pursuit" across land borders. This was aggression pure and simple. Then on 26 August 2003 President Bush Jr. told the American Legion Convention that he was fully prepared to launch more "pre-emptive" attacks against his chosen enemies around the world.44 So Bush Jr. clearly sketched out on the horizon the prospect of more acts of aggression at the very opening of his 2004 presidential election campaign. Will Bush Jr. further exploit aggression and warfare in order to win his very first U.S. presidential election? Or will he steal the U.S. Presidency from the American People as he did in 2000? Or perhaps some combination of both strategies? His Rasputin Karl Rove will know for sure. Belligerent Occupation

When the Bush Jr. administration's aggression against Iraq was over, the United States and the United Kingdom became the "belligerent occupants" of Iraq in accordance with, and subject to the requirements of, the laws of war. Succinctly put, these can be found in the Fourth Geneva Convention of 1949, its A

over primary sources. Finally, he respects himself and
his subject, which allows him to question sources before arriving
at a judgment on someone's credibility. This last quality allowed
him to arrive at what is the most satisfactory conclusion about
the death of Monroe (Spoto pp. 566-593). The Kennedys had nothing
to do with it. I have no great interest or admiration for Monroe
as an actress or a personality. But I do appreciate good
research, fine writing, and a clear dedication to truth. If any
reader is interested in the real facts of her life, this is the
book to read.

Sy Hersh's "Truth"

Seymour Hersh apparently never read it. And in fact, as Robert
Sam Anson relates in the November 1997 Vanity Fair, Hersh never
thought there was a conspiracy in the JFK case (p. 108). But in
1993, a friend at ABC proposed an investigative segment for the
network on the 30th anniversary of the murder. Apparently, the
idea fell through. But by that time, Hersh had hooked up with an
old pal, Michael Ewing. Hersh then decided that a book on the
Kennedys-not necessarily the assassination- would bring him the
big money that he craved. Thro

tale again, inserting a new twist. He added the possibility that the FBI and/or the CIA might have been involved in the murder in order to blackmail Bobby (p. 242). In 1973, pre-Rupert Murdoch, the media had some standards. Mailer was excoriated for his baseless ruminations. In private, he admitted he did what he did to help pay off a tax debt. He also made a similar confession in public. When Mike Wallace asked him on 60 Minutes (7/13/73) why he had to trash Bobby Kennedy, Mailer replied "I needed money very badly."

Swallowing Slatzer

The worst thing about Mailer's money-grubbing antics was that it gave an alley to run through to a man who had actually been at work before Mailer's book was published. In 1972, Robert Slatzer approached a writer named Will Fowler. Slatzer had been at work on an article which posited a conspiracy to murder Monroe. Fowler read it and was unimpressed. He told Slatzer that had he been married to Monroe, now that would make a real story. Shortly after, Slatzer got in contact with Fowler again. He said he forgot to tell him, but he had been married to Monroe. The "marriage" was a short one: 72 hours.

in the Senate was headed by Idaho's Frank Church.
Other leading lights on that committee were Minnesota's Walter Mondale, Colorado's Gary Hart, Tennessee's Howard Baker, and Pennsylvania's Richard Schweiker.

As writers Kate Olmsted and Loch Johnson have shown, the Church Committee was obstructed by two of the CIA's most potent allies: the major media and friendly public figures. In the latter category, Olmsted especially highlights the deadly role of Henry Kissinger. But as Victor Marchetti revealed to me, there was also something else at work behind the scenes. In an interview in his son's office in 1993, Marchetti told me that he never really thought the Agency was in danger at that time. He stated that first, the CIA had infiltrated the staff of Church's committee and, second, the Agency was intent on giving up documents only in certain areas. In Watergate terminology, it was a "limited-hangout" solution to the problem of controlling the damage.

The Escape Route

The issue that had ignited so

Vanity Fair article, his fellow workers on the ABC documentary
say, "there have been moments when, while recounting private acts
of kindness by JFK, Hersh has broken down and wept." (Anson p.
122) This from a man who intimidated witnesses with his phony
papers and waved them aloft while damning the Kennedys with them.
I believe his tears as much as I do the seance that Ben Bradlee
and Jim Angleton attended to speak with the spirit of Mary Meyer
(see Part One). At the end, Hersh joins in the con job: "I would
have been absolutely devoted to Jack Kennedy if I had worked for
him. I would have been knocked out by him. I would have liked him
a lot." (Ibid) With what Anson shows of Hersh, I actually believe
him on this score. He would have loved his version of Kennedy.

Anson's article begs the next question: who is Hersh? As is
common knowledge, the story that made Hersh's career was his
series of articles on the massacre of civilians at the village of
My Lai in Vietnam. Hersh then wrot

(Ibid) With what Anson shows of Hersh, I actually believe him on this score. He would have loved his version of Kennedy.

Anson's article begs the next question: who is Hersh? As is common knowledge, the story that made Hersh's career was his series of articles on the massacre of civilians at the village of My Lai in Vietnam. Hersh then wrote two books on this atrocity: My Lai 4 and Cover Up. There have always been questions about both the orders given on that mission and the unsatisfactory investigation after the fact. These questions began to boil in the aftermath of the exposure of the Bill Colby/Ted Shackley directed Phoenix Program: the deliberate assassination of any Vietnamese suspected of being Viet Cong. The death count for that operation has ranged between twenty and forty thousand. These questions were even more intriguing in light of the fact that the man chosen to run the military review of the massacre, General Peers, had a long term relationship with the CIA. In fact, former Special Forces Captain John McCarthy told me that-in terms of closeness to the Agency-Peers was another Ed Lansdale.

By the time Hersh's s

Sins of the Father. On the first day of the
Democratic convention in Los Angeles in 1960, Kennedy sends for
Exner. She arrives at the hotel but several people are there,
including Kennedy's sister. He assures her that they will all be
leaving momentarily and that he wants to be alone with her in his
moment of victory. Eventually most of the visitors leave except
for two: a tall skinny secretarial type, and Kennedy's adviser
Ken O'Donnell. As JFK and Exner slip into the bedroom, the
secretary type slips into the bathroom. Exner is puzzled.

Kennedy/Flynn then suggests a menage a trois. Exner is outraged,
"I can't tell you how disappointed I am in you." Kennedy is in
love with her though. Sweetly, he eventually calms her down and
they later resume their relationship.

There was something about this hotel scene that bothered me.
Something was off and I couldn't put my finger on it until later.

I then realized that Exner had left Ken O'Donnell in the suite
before the fireworks began. I couldn't understand why. Was Kenny,
with the boss' permission, going to make it a foursome? Was he
there because he liked to watch and Kennedy understood? Was he
going to take pictures so Kennedy/Flynn could admire his
handiwork later? Or was he just there to give JFK a ride home
since he would be too tired to drive? None of the above. Kennedy
asks Exner to give O'Donnell a ride home. When she drops him off,
Exner

public interest in the
hearings had been that of assassination. CIA Director Bill Colby very clearly drew the line that the CIA had never plotted such things domestically. Colby's admission was a brilliant tactical stroke that was not appreciated until much later. First, it put the focus on the plots against foreign leaders that could be explained as excesses of anti-communist zealotry (which is precisely what the drafters of Church's report did). Second, all probes into the assassinations of JFK, RFK, and MLK would be off-limits. The Church Committee would now concentrate on the performance of the intelligence community in investigating the death of JFK; not complicity in the assassination itself. This distinction was crucial. As Colby must have understood, the Agency and its allies could ride out exposure of plots against Marxists and villains like Castro, Patrice Lumumba of the Congo and Rafael Trujillo of the Dominican Republic. The exposure of domestic plots against political leaders would have been lethal.

Colby's gambit, plus the strictures put on the investigation as outlined by Marchetti above, enabled the intelligence community to ride out the storm. The path chosen for limited exposure was quite clever. The most documentation given up by the CIA was on the Castro assassination plots. Further, the Agency decided to give up many documents on both the employment of the Mafia to kill Fidel, and the AM/LASH plots, that is, the enlistment of a Cuban national close to Castro to try and kill him. Again, not enough credit has been given to the wisdom of these choices. In intelligence parlance, there is a familiar phrase: muddying the waters. This

in two ways. Either it was, as in Newman believes, a "good" fake, or a false lead planted to begin an orchestrated campaign. More specifically, Rothberg was either a witting or unwitting conduit to the media for either Hoover or Angleton (or both). The quick Winchell follow-up would argue for Hoover. The Director would want someone else to lead the story before his man Winchell pushed it to the limit. The "diary of secrets," so reminiscent of Mary Meyer (discussed in Part One of this article) would suggest Angleton.

Capell was drawn up on charges in 1965. The charges were rather fatal to the tale told in his RFK pamphlet: conspiracy to commit libel. One would have thought this discreditation was enough to impale the tale. And it probably would have been had it not been for Norman Mailer. In 1973, Mailer published a book, Marilyn, (really a photo essay) with the assistance of longtime FBI asset on the Kennedy assassination Larry Schiller. He recirculated the tale again, inserting a new twist. He added the possibility that the FBI and/or the CIA might have been involved in the murder in order to blackmail Bobby (p. 242). In 1973, pre-Rupert Murdoch, the media had some standards. Mailer was excoriated for his baseless ruminations. In private, he admitted he did what he did to help pay off a tax debt. once contemplated getting rid of not only
Castro, but his brother Raul and Che Guevara as well as part of single operation. That would have made a clean sweep of it. (In America's case, one could argue that such an operation was conducted here, over a period of five years.)
The smothering effect afterward must hold, since the assassinated leader cannot be allowed to become a martyr or legend. To use a prominent example, in 1973, right after the CIA and ITT disposed of Salvador Allende and his Chilean government, the State Department announced (falsely) that the U. S. had nothing to do with the coup. Later on, one of the CIA agents involved in that operation stated that Allende had killed himself and his mistress in the presidential palace. This was another deception. But it did subliminally equate Allende's demise with the death of Adolf Hitler.

The latter tactic is quite prevalent in covert operations. The use of sex as a discrediting device is often used by the CIA and its allies. As John Newman noted in Oswald and the CIA, the Agency tried to discredit its own asset June Cobb in the wake of the Kennedy assassination. It did the same to Sylvia Duran, Cuban embassy worker in Mexico City who talked to Oswald or an impersonator in 1963. In Probe (Vol. 4 No. 4, p. 9) we have seen how journalist (and CIA-applicant) Hugh Aynesworth and the New York Herald Tribune tried to smear Mark Lane with compromising photographs. If one goes to New Orleans, one will still meet those who say that Jim Garrison indicted Clay Shaw because he was himself gay and jealous of Shaw's position in the homosexual underworld. And we all know how the FBI tried to drive King to suicide by blackmailing him with clandestinely made "sex tapes."

The Church Committee

What precipitated these posthumous and personal attacks on the Kennedys? Something happened in the seventies that necessitated the "second assassination" from the right - i.e. the use of scandal to stamp out Kennedy's reputation and

The exposure of domestic plots against political leaders would have been lethal.

Colby's gambit, plus the strictures put on the investigation as outlined by Marchetti above, enabled the intelligence community to ride out the storm. The path chosen for limited exposure was quite clever. The most documentation given up by the CIA was on the Castro assassination plots. Further, the Agency decided to give up many documents on both the employment of the Mafia to kill Fidel, and the AM/LASH plots, that is, the enlistment of a Cuban national close to Castro to try and kill him. Again, not enough credit has been given to the wisdom of these choices. In intelligence parlance, there is a familiar phrase: muddying the waters. This means that by confusing and confounding the listener with diverse and prolific amounts of information, the main point becomes obfuscated. Since none of the Mafia plots succeeded, one could claim they were ineffectual. The huge amount of publicity garnered by them could eventually be deflected onto the Mob's role in them and not the Agency's. The AM/LASH plots, exposed in even more copious documentation, could be used in a similar way.

If Castro knew about these plots within his midst, couldn't he then claim turnabout and use the same tactics by employing a Communist in the U.S. to kill Kennedy? This, or

time
the search party includes the Angletons, Tony Bradlee and -
making their first appearances - Mary's ex-husband Cord Meyer,
and Mary's old college roomie Ann Chamberlain. The search goes on
for hours amid drinking and even dishwashing by Angleton. The
diary is not found. Later (at an unspecified time) Tony Bradlee
finds it in the studio, this time in a locked steel box. And this
time, there are "hundreds" of letters, not just several. In the
Rosenbaum version, Angleton says that he burned the whole
package. Yet Rosenbaum also writes that other unnamed sources say
the contents were sent to the Pinchot estate in Milford,
Pennsylvania.

I could also quote other versions of the diary search e.g. the
sketchy one in the book Katherine the Great. But the point is
clear that someone - perhaps more than one - is lying. The
versions are not reconcilable. And they can't be chalked up to
memory lapses, not for such an unusual, even singular event. It
is striking that even the time frame and principals involved
change between versions. Concerning the former, if the call from
the Truitts came in the night of Mary's death, why wait five days
to search for the diary? About the latter, either all the people
who say they were there were not, or are lying about the presence
of others. Rosenbaum got interviews with some of the principals,
Angleton, Bradlee, and others who gave him bits of information
(Cord Meyer would seem to be a source). Yet in his detailed
account he can, with a straight face, write that the bonds among
those involved in the search were so strong that years later,
some of them attended a

and Complicity

Conspiracy, direct incitement, and attempts to commit, as well as complicity in the commission of, crimes against peace, crimes against humanity, and war crimes are punishable.

These prohibitions of U.S. Army Field 27-10 (1956) apply directly to President Bush Jr. in his constitutional capacity as "Commander-in-Chief of the Army and Navy of the United States" under Article 2, Section 2, Clause 1 of the United States Constitution. They also apply to his subordinates in the military chain-of-command: Vice President Cheney, Secretary of War Rumsfeld, Deputy Secretary of War Wolfowitz, etc. So even in accordance with the terms of U.S. Army Field Manual 27-10 itself, Bush Jr., Cheney, Rumsfeld, and Wolfowitz, inter alia, are guilty of committing a Nuremberg Crime against Peace for their war of aggression against Iraq in violation of the United Nations Charter and the Kellogg-Briand Peace Pact, at a minimum. The same conclusion applies to Secretary of State Colin Powell, National Security Adviser Condoleezza Rice, C.I.A. Director George Tenet, the pro-Israeli Neo-Con Straussian cabal, and other high-level Bush Jr. administration officials dealing with foreign affairs, "defense" and "intelligence," who plotted, planned, conspired, promoted, incited, as well as aided and abetted this criminal war against Iraq. U.S. Army Field Manual 27-10 (1956) makes it quite clear that these prohibitions of international criminal law apply to everyone, whether civilians or military personnel. Nazi civilian government officials were convicted and hanged at Nuremberg too.41

Notice that in accordance with paragraph 500 of U.S. Army Field Manual 27-10 (1956), pursuant to the now officially promulgated Bush Jr. Doctrine of Preventive Warfare, the above-named individuals are also currently engaging in an on-going criminal c

debunking of the
documents (which we now know was underplayed by ABC.) Jennings
cornered Lex Cusack, the man who "found" the papers in the files
of his late father who was an attorney. From published accounts,
the documents were supposedly signed by five people: JFK, RFK,
Monroe, Janet DesRosiers (Joe Kennedy's assistant) and Aaron
Frosch (Monroe's lawyer). They outline a settlement agreement
between JFK and Monroe signed at the Carlyle Hotel in New York on
March 3, 1960. The documents set up a $600,000 trust to be paid
by contributions from the individual Kennedy family members to
Monroe's mother, Gladys Baker. In return for this, Monroe agrees
to keep quiet about her relationship with JFK and any underworld
personalities she observed in Kennedy's presence. The latter is
specified as being Sam Giancana. Kennedy had a lawyer out of his
usual orbit, Larry Cusack of New York, do the preparation.

Just from the above, one could see there were certain problems
with the story. First, its details could have been culled from
reading the pulp fiction in the Monroe field: the idea that JFK
had a long, ongoing affair with Monroe; that she had threatened
to go public with it; that the Kennedys were in league with
Giancana; that the family would put up money to save JFK's career
etc. All this could have been rendered from reading, say two
books: Slatzer's and Thomas Reeves'. Even the touch about the
Carlyle Hotel-Kennedy's New York apartment-is in the Reeves book.
In other words, it is all too stale and pat, with none of the
twists or turns that happen in real life. Secondly, are we to
truly believe that the Kennedys would put their name to a
document so that a woman blackmailing them would have even more
power to blackmail them in the future? Or was that to lead into
why the Kennedys had her killed?
Hersh has leapt so enthusiastically into the "trash Kennedy"
abyss th

war criminals in the post-World War II era.20
Do not send your children to the University of Chicago where they will grow up to become warmongers like Wolfowitz or totalitarians like Ashcroft! The University of Chicago is an intellectual and moral cesspool. A Course on Oil and Gas Law

I will not waste the reader's time here by cataloguing, reviewing, and refuting all the factoids of the Bush Jr's pro-Israeli Straussian Neo-Con war propaganda campaign against Iraq.21 But there were certainly multiple reasons for this Bush Jr. war of aggression against Iraq besides Israel. Of course there also came the Bush Family vendetta against Iraqi President Saddam Hussein and his Family, now having rubbed out his two sons and a teenage grandson. Having been born and raised on the Southside of Chicago right near Al Capone's old headquarters as well as the site of his St. Valentine's Day Massacre, I know gangsters when I see them in operation. But at the top of the Bush Jr./Sr. hit-list was oil and the fact that Iraq possessed about 11% of the world's oil reserves Indeed, prior thereto it was the thirst and lust for oil and natural gas by the American Power Elite22 that was really behind the Bush Jr. administration's aggression against Afghanistan in order to gain direct access to the rich oil and natural gas fields of Central Asia, once again using the terrible tragedy of September 11th as public justification for a pre-planned

book, the authors allude to the pamphlet
that started the industry. Describing Bobby's 1964 campaign for a
Senate seat in New York, they write:
Meanwhile, right-wingers were circulating a pamphlet
entitled "The Strange Death of Marilyn Monroe," charging
that Bobby had been having an affair with the film actress
and, when she threatened to expose some of his dealings in
appeasing the Castro regime, had her killed by Communist
agents under his control. (p. 409)

The authors fail to note the man who penned this work. His name
was Frank Capell. Capell is usually described as an extreme right-
winger associated with the John Birch Society. This is apt, but
incomplete. As Jim Garrison once noted, the more one scratches at
these Minutemen types, the more their intelligence connections
appear.

Swallowing Frank Capell

Capell had worked for the government in World War II, but was
convicted on charges of eliciting kickbacks from contractors for
the war effort. After the war, in the Red Scare era, Capell began
publishing a Red baiting newsletter, The Herald of Freedom. He
was highly active in attempting to expose leftists in the
entertainment industry. It was this experience that put him in a
good position to pen his McCarthyite, murderous smear of Bobby
Kennedy.

But there is another element that needs to be noted about Capell:
his ties to the FBI. As Lisa Pease noted in her watershed artic

CIA to kill Fidel." Evidently, Exner was so convincing that neither Kelley nor her editors ever entertained any doubts. Or to hopeless cynics like myself, maybe they didn't want to blow the hundred grand they had invested in their cover story.

Kelley did ask one pertinent question. Namely, why did Exner not tell Demaris these startling details back in 1977? Why did she wait eleven years to bare her soul? Exner says she was afraid and needed to protect herself. Unfortunately, this rings a bit hollow since 1) Giancana and Roselli were both dead when she wrote her book, 2) the Church Committee spilled all the beans on the plots to kill Castro in 1975, which 3) leaves only the Kennedys to fear, and its clear she doesn't give a damn about them.

But for those still skeptical, she adds the other (clinching) reason for breaking the silence: her doctor told her she had terminal cancer and she had only 36 months to live. The article ends in a crescendo that would move even the world weary Claude Rains:
Now that I know I'm dying and nothing more can happen to me, I want to be completely honest. I don't think I should have to die with the secret of what I did for Jack Kennedy, or what he did with the power of his presidency. I feel that I am finally free of the past.

Exner's 1997 Version

I hope Exner sued her doctor, because ten years later she's still with us. She now turns up in the pages of the January 1997 Vanity Fair which, unembarrassed, again bills her as "facing her death."

This time she was

Corrupting and corroding world order wherever it goes.
Throughout this sordid affair, U.N. Secretary General Kofi Annan basically operated as an errand-boy for the United States government despite the requirements of Chapter XV of the U.N. Charter establishing the U.N. Secretariat as one of the six independent organs of the United Nations Organization, and in particular, of Charter article 100, paragraph 1 mandating the absolute independence of the Secretary General and the U.N. Secretariat from taking instructions by any U.N. Member State: In the performance of their duties the Secretary-General and the staff shall not seek or receive instructions from any government or from any other authority external to the Organization. They shall refrain from any action which might reflect on their position as international officials responsible only to the Organization.

For these reasons, the United Nations Organization was quickly perceived to be aiding and abetting the criminal U.S./U.K. belligerent occupation regime in Iraq and thus an appropriate target for attack by Iraqi resistance forces. Hence the 19 August 2003 car-bombing of the U.N. Headquarters in Baghdad with its horrendous lo

which was antagonistic to
Leary personally and a lot less liberal in its approach. Leary was quite frank about this in his book High Priest (p. 67) and later in Changing My Mind (pp. 143 ff.). Whatever his motives, Leary's retroactive endorsement is just not credible.

The Split at the Post

In fact, when it comes to Mary Meyer, stories between the same couple are not consistent. As mentioned previously, Bradlee states in his book that Kennedy's name was not in the diary. Yet his wife told The National Enquirer, that although she only looked at it briefly, Kennedy's name was there. According to an interview with writer Debbie Davis, Ben Bradlee once told television personality David Frost that the diary was not even a diary but in fact a sketchbook.

In this regard, Tony Bradlee made a telling comment to the National Enquirer in 1976. In the notes written up from her interview, after she has discussed (with a bit of ambiguity) whether or not Kennedy's name was in the diary, she is quoted as saying: "But the diary was destroyed. I'll tell you that much is true." The suggestion in the last sentence is that everything else is not. Or, at least, the diary's destruction is all she knows for a fact.

If Mary's own sister is not forthright, then who among the rest is? Don't rely on Rosenbaum to find out. He is a friend of both Angleton and the Post. Consider the man who helped him write his 1976 Mary Meyer piece, one Philip Nobile. When I interviewed Deborah Davis about the attempted censorship of her book, which exposed the Post's ties to the CIA, she told me that her troubles began with a whispering campaign to her publisher. The whisperer was Rosenbaum's partner Nobile. When that wasn't enough, Nobile talked to Alexander Cockburn of the Village Voice. Cockburn printed the rumors that her book was unfounded and that she had cried in her pu

this, this the book's subtitle gives the answer,
describing Ray as "The Man who Murdered Martin Luther King." To
be sure there is no ambiguity, on page 146 Blair has Ray shooting
King just as the FBI says he did, no surprise since Blair
acknowledges help from the Bureau and various other law
enforcement agencies in his acknowledgements.

The Ray book is basically an exercise in guilt through character
assassination. This practice has been perfected in the Kennedy
assassination field through Oswald biographers like Edward
Epstein and Priscilla Johnson McMillan. Consider some of Blair's
chapter headings: "A Heritage of Violence," "Too Many Strikes
Against Him," "The Status Seeker." In fact, Blair actually
compares Ray with Oswald (pp. 88-89). In this passage, the author
reveals that he also believes that Oswald is the lone assassin of
Kennedy. He then tries to imply that Ray had the same motive as
his predecessor: a perverse desire for status and recognition.

Later, Blair is as categorical about the JFK case as he is about
the King case:
In the case of John F. Kennedy the debate still rages.
Millions of words have been written-pro and con. Yet no one
has produced a single piece of hard evidence that Lee Harvey
Oswald was anything more than a psychopath acting entirely
on his own. (p. 106)

I could continue in a similar vein with excerpts from this book
and I could also go on with more questionable aspects of Clay
Blair's background. And I could then use this information, and
the inferences, to dismiss The Search for JFK. I could even add
that Blair's agent on his Kennedy book was Scott Meredith, who
was representing Judith Exner at the time. But I won't go that
far. I may be wrong, but in my opinion I don't think the book can
be classi

In the revisionist go round the
suggestion is that good Italian Catholics, even though they may
be murdering mobsters, don't believe in premarital sex.

More Hidden History

What are the new revelations about the Kennedys that merited
Exner's meeting with Smith for a catered dinner at the five star
Four Seasons Hotel in Newport Beach? There are two. First, she
forgot to add that Bobby's crimefighting campaign was a mirage.

Not only did he not mind JFK's White House meetings with
Giancana, he encouraged her in arranging them. For Vanity Fair,
she remembers RFK's words to her about the subject:
You know I used to be at the White House having lunch or
dinner with Jack, and Bobby would often come by. He'd
squeeze my shoulder solicitously and ask, "Judy, are you
O.K. carrying those messages for us to Chicago? Do you still
feel comfortable doing it?"
This about the man who had such heavy surveillance on Giancana
that the mobster went to court to stop those six FBI agents from
following him everywhere. Including the putting green of the golf
course.

The other revelation is something that she forgot: Kennedy
impregnated her and she had an abortion. There are some problems
with this that the never curious Smith doesn't bother to pursue.

In 1977, in her book, Exner stated that there was no abortion;
that this was a canard made up by the FBI in order to harass her.

In fact, it is the one scene in the book that has emotional
force. Consider for yourself:
"A what?" I yelled, speaking to them for the first time
since the day they had broken into my apartment.... "You
people are insane! I didn't have an a

Generation, they write that the Rockefeller book began when the pair were soliciting funds to keep Ramparts afloat (p. 275). This is how they got in contact with the younger generation of that clan. So when the magazine fell, they went to work on the family biography with access to people and papers that no outside, nonofficial authors had before. It is interesting that, in 1989, the authors wrote that when they started the Rockefeller book, they were expecting to excavate an "executive committee of the ruling class" and thereby unlock the key to the American power elite. But they found that they only ended up writing about American lives (Ibid). They ended up with that result because that seems to have been the plan all along.

Towards the end of the book, the authors strike a rather wistful note, a sort of elegy for a once powerful family that is now fading into the background (The Rockefellers, p. 626). This is extraordinary. Consider some of the things the Rockefellers accomplished in the seventies: they were part of the effort to quadruple gasoline price

to
be such a friend to the Post. Related to that, in his 1991
reflections on the 1976 article, and in the article itself, he
tries to insinuate that these people - Bradlee, the Truitts, the
Angletons - are actually friends of Kennedy. In addition,
Rosenbaum and others never seemed to ask why those involved all
seemed so eager to violate Mary's privacy by reading the diary.

In no version I have read was that ever part of Mary's
instructions. And Angleton, the man who the Truitts seem to side
with against Bradlee, supposedly went through them like an
archivist.

The Truitts' trust for and seeming loyalty to the Angletons is
particularly interesting. In Rosenbaum's 1976 piece, the
following passage appears:
The Truitts were still in Tokyo when they received word of
the towpath murder, and the responsibility for the diary was
communicated to their mutual friend James Angleton through
still uncertain channels.

With the quiet skill of a cardsharp, Rosenbaum avoids an
important detail. Namely, how the Truitts found out about Mary's
death in the middle of the night halfway around the world.

Someone must have either called or wired them. Why is this matter
never addressed in any version? The logical choice as contacts

thereby ignoring the abundant evidence unearthed
by the Church Committee which says he had none. Nevertheless,
Kelley and Exner will now exhume the hidden history of those
times for People. Let's examine their excavation.

Exner says that Kennedy needed help in West Virginia in the 1960
primary. So her first secret assignment for Kennedy was to
arrange a meeting with "Sam Flood" for JFK. (By a coincidence,
Kennedy also knew Giancana by the very same alias that Exner did,
even though he had fifteen others.) After the meeting, with Exner
waiting outside, Kennedy emerged beaming. He was so exuberant he
wanted to pay for a mink coat for his girl. And of course, he won
the election. On the heels of this success, Exner arranged
another meeting between Kennedy and Giancana. (In an insider
aside, Exner assures us that Giancana called the president
"Jack"). In the ensuing exchanges of sealed envelopes between the
two, Exner didn't open any of them. In another aside, Kennedy
cutely tells her, "Don't let him [Giancana] turn your head."

Later, JFK wanted meetings with Roselli too. After a series of
these, the meetings stopped. Retroactiv

misunderstood
disease that he knew his political opponents would distort and exaggerate in order to destroy him, which is just what LBJ and John Connally attempted to do in 1960. The myopic authors save their ire for Kennedy and vent none on Johnson or a potentially rabid political culture on this issue.

The second major area of focus is Kennedy's sex life. The authors excuse this preoccupation with seventies revelations, an apparent reference to Exner, Meyer, and perhaps Monroe (p. 667). Kennedy seems to have been attractive to females. He was appreciative of their overtures. There seems to me to be nothing extraordinary about this. Here we have the handsome, tall, witty, charming son of a millionaire who is eligible and clearly going places. If he did not react positively to all the attention heaped on him, I am sure his critics would begin to suggest a "certain latent homosexual syndrome." But what makes this (lengthy) aspect of the book interesting is that when the Blairs ask some of Kennedy's girlfriends what his "style" was (clearly looking for juicy sex details), as often as not, the answer is surprising. For instance, in an interview with Charlotte McDonnell, she talks about Kennedy in warm and friendly terms adding that there was "No sex or anything" in their year long relationship (p. 81).

Another Kennedy girlfriend, the very attractive Angela Greene had this to say:
Q: Was he romantically pushy?
A: I don't think so. I never found him physically aggressive, if that's what you mean. Adorable and sweet. (p. 181)

In another instance, years later, Kennedy was dating the beautiful Bab Beckwith. She invited Kennedy up to her apartment after he had wined and dined her. There was champagne and low music on the radio. But then a news broadcast came on and JFK leaped up, ran to the radio, and turned up the volume to listen to it. Offe

for his girl. And of course, he won
the election. On the heels of this success, Exner arranged another meeting between Kennedy and Giancana. (In an insider aside, Exner assures us that Giancana called the president "Jack"). In the ensuing exchanges of sealed envelopes between the two, Exner didn't open any of them. In another aside, Kennedy cutely tells her, "Don't let him [Giancana] turn your head."

Later, JFK wanted meetings with Roselli too. After a series of these, the meetings stopped. Retroactively, Exner finally realized that, unbeknownst to her, she was arranging the plots to kill Castro.

The trusting Kelley never seemed curious enough to ask the skeptical questions that any researcher would pose. For instance, the Kennedy family's worth at that time was estimated to be between 400 and 600 million. With that kind of money, why would they need someone like Giancana to buy a state as sparsely populated as West Virginia? Was he supposed to rally up the squirrel vote? Kelley never asked what Bobby Kennedy's reaction was to seeing Giancana at the White House. But considering his efforts against Giancana, it must have been something like, "Geez Sam, I guess our surveillance slipped. I didn't know you were going to be here tonight." Or to his brother: "Jack, this is going to make me look like a hypocrite. Also, it will compromise my case against this guy in court when he shows the judge that photo of us three sitting here." Finally, Kelley has no questions about a glaring inconsistency in her scenario. In the course of these ongoing meetings, probably at the first one, wouldn't nice guy Sam say, "Jack I really appreciate the dinner, but this is all kind of redundant. See, I'm already working with Bob Maheu at CIA to kill Fidel." Evidently, Exner was so convincing that neither Kelley nor her editors ever entertained any doubts. Or to hopeless cynics like myself, maybe they didn't want to blow the hundred grand they had invested in their cover story.

Kelley did

this struggle, largely through
Hersh's stories. But the week before Hersh's stories were printed, on December 16, 1974, Colby addressed the Council of Foreign Relations on this very subject and admitted to the domestic spying (Imperial Brain Trust p. 61). Why? Because their selective exposure could be used to oust Angleton. Many now believe that Hersh's stories were part of Colby's campaign to oust Angleton, sanctioned by the CIA Director himself.

Next up for Hersh was the story of the downing of KAL 700. This was the curious case of the Korean Air Liner shot down over Russian air space after having drifted off course. Many suspected that, as with the My Lai case, there was more here than met the eye. The long length of time that the plane had been off course, as well as its failure to respond to signals, led some to believe that the Russians had no choice but to shoot down the plane. In fact, many articles appeared, for example in The Nation, to support that thesis. The Reagan administration wanted to portray the incident as an example of Soviet barbarity (shades of Basulto's Brothers to the Rescue). They, and specifically Jeanne Kirkpatrick, treated the downing as a great propaganda victory. In his book, The Target Is Destroyed, Hersh ended up siding with the administration.

Which brings us to the nineties. Everyone knows that the broad release of Oliver Stone's JFK in 1992 put the Kennedy assassination back into play. The pre-release attack against the film was unprecedented in movie history. That's because it was more than just a movie. It was a message, with powerful political overtones that dug deeply into the public psyche: a grand political conspiracy had killed the last progressive president.

That V

than fiction will sell
better in a market already jaded by exotic overexposure."

Demaris' book on Hoover can only be called sympathetic. This is immediately indicated by his choice of interviewees. They include high level FBI administrators like Robert E. Wick, John P. Mohr, and Mark Felt; former Attorney General Richard Kleindienst; Hoover publicity flack Louis Nichols who named one of his sons after his boss; and actor Efrem Zimbalist who starred in ABC's glamorized series on the Bureau. In the entire book, there are eight pages on Hoover's infamous COINTELPRO operations, i.e. the infiltration, disruption, and occasional destruction of domestic political movements.

In Hoover's disputes with the Kennedys, there can be no doubt where Demaris stands. Speaking of Hoover's reputed blackmailing of presidents, he writes: "It is possible that one or two were intimidated by their own guilty conscience...." He sums up Hoover by saying, "He was, whatever his failings, an extraordinary man, truly one of a kind." The above gives

process that has been inflicted by Chicago's Straussian Neo-Con cabal.3

The University of Chicago routinely trained me and innumerable other students to become ruthless and unprincipled Machiavellians. That is precisely why so many neophyte Neo-Con students gravitated towards the University of Chicago or towards Chicago Alumni at other universities. Years later, the University of Chicago became the "brains" behind the Bush Jr. Empire and his Ashcroft Police State. Attorney General John Ashcroft received his law degree from the University of Chicago in 1967. Many of his lawyers at the Bush Jr. Department of Injustice are members of the right-wing, racist, bigoted, reactionary, and totalitarian Federalist Society (aka "Feddies"),4 which originated in part at the University of Chicago. Feddies wrote the USA Patriot Act (USAPA) I and the draft for USAPA II, which constitute the blueprint for establishing an American Police State.5 Meanwhile, the Department of Injustice's own F.B.I. is still covering up the U.S. governmental origins of the post 11 September 2001 anthrax attack on Washington D.C. that enabled Ashcroft and his Feddies to stampede the U.S. Congress into passing USAPA I into law.6

Integrally related to and overlapping with the Feddies are members of the University of Chicago "School" of Law-and-Kick-Them-in-the-Groin-Economics, which in turn was founded upon the Market Fundamentalism of Milton Friedman, now retired but long-time Professor of Economics at the University of Chicago. Friedman and his "Chicago Boys" have raped, robbed, looted, plundered, and pillaged economies and their respective peoples all over the develo

Nixon over
Watergate-spawned a wave of new anti-Kennedy "expose"
biographies. Anti-Kennedy tracts were not new. But these new
works differed from the earlier ones in that they owed their
genesis and their styles to the events of the mid-seventies that
had brought major parts of the establishment (specifically, the
CIA and the GOP) so much grief. In fact we will deal with some of
the earlier ones later. For now, let us examine this new pedigree
and show how it fits into the movement outlined above.

Looking for Mr. Kennedy
(And Not Finding Him)

The first anti-Kennedy book in this brood, although not quite a
perfect fit into the genre, is The Search for JFK, by Joan and
Clay Blair Jr. The book appeared in 1976, right after Watergate
and the Church Committee hearings. In the book's foreword, the
authors are frank about what instigated their work:

During Watergate (which revealed to us the real character of
President Richard M. Nixon-as opposed to the manufactured
Madison Avenue image), our thoughts turned to Jack
Kennedy....Like other journalists, we were captivated by
what was then called the "Kennedy mystique" and the
excitement of "the New Frontier." Now we began to wonder.
Behind the image, what was Jack really like? Could one, at
this early date, cut through the cotton candy and find the
real man? (p. 10)

In several ways, this is a revealing passage. First of all, the
authors apparently accept the Washington Post version of
Watergate-i.e. that Nixon, and only Nixon, was responsible for
that whole range of malfeasance and that Bob Woodward and Carl
Bernstein got to the bottom of it. Second, it seems to me to be a
curious leap from the politically misunderstood shenanigans of
Watergate to the formative years of John Kennedy's college prep
days and early adulthood, which is what this book is about. It
takes JFK from his days at the exclusive Choate School in
Connecticut

did it for the
Mob, and an all out trashing of the Kennedys.

The standard defense by these purveyors is that they go on the offense. Anyone who objects to their peculiar blend of misinformation, or questions their sources or intent is labeled as "protecting the Kennedys," or a "disappointed Kennedy fan," or a "hagiographer." Tactically, this is a great cover to avoid the questionable credibility of people like the Alsops, Priscilla Johnson McMillan, or a flimflam man like Slatzer. It also avoids acknowledging their descent into the ranks of Hoover and Angleton. When Summers' book on Hoover came out, which followed much the same line on the Kennedys as Goddess, he got a guest spot on The Larry King Show. There, Hoover aide Cartha De Loach called his book a collection of "sleaze." Summers fought back by saying that Hoover and De Loach were peddling "sex tapes" about Martin Luther King to the press. At that point, if Larry King weren't such a stiff, he would have stepped in and noted, "But Tony, we expect that kind of thing from a guy like Hoover. What's your excuse?"

So Where are the Kennedys?

In a deeper sense, it is clear now that no one in the major media was or is "protecting the Kennedys." The anti-Kennedy genre has now become self-sustaining. Summers used the Collier and Horowitz book for Goddess. He even uses Priscilla McMillan to connect JFK with Monroe! (p. 244) Will Liz Smith call him on this? Will Ben Bradlee? Far from "protecting t

went one step further. They
interviewed people who were there. None of the attendees recalled
anything said about Mary Meyer.

To me, this apocryphal anecdote and Leary's book seem ways to
bolster a tale that needed to be recycled and souped up before
its chinks began to show. Leary's reason for being a part of the
effort may be through his association with intelligence asset
Liddy. Or it may be because he was never enamored of the
Kennedys' approach to the drug problem, which was antagonistic to
Leary personally and a lot less liberal in its approach. Leary
was quite frank about this in his book High Priest (p. 67) and
later in Changing My Mind (pp. 143 ff.). Whatever his motives,
Leary's retroactive endorsement is just not credible.

The Split at the Post

In fact, when it comes to Mary Meyer, stories between the same
couple are not consistent. As mentioned previously, Bradlee
states in his book that Kennedy's name was not in the diary. Yet
his wife told The National Enquirer, that although she only
looked at it briefly, Kennedy's name was there. According to an
interview with writer Debbie Davis, Ben Bradlee once told
television personality David Frost that the diary was not even a
diary but in fact a sketchbook.

In this regard, Tony Bradlee made a telling comment to the
National Enquirer in 1976. In the notes written up from her
interview, after she has discussed (with a bit of ambiguity

operations to control
American elections to him. Leary, who mentioned many of those he turned on throughout his books, and thanks those who believed in him, deemed this unimportant. That is until the 20th anniversary of JFK's death. (Which is when Rosenbaum wrote his ugly satire on the Kennedy research community for Texas Monthly which in turn got him a guest spot on Nightline.) This is also when Leary began hooking up with Gordon Liddy, doing carnival-type debates across college campuses, an act which managed to rehabilitate both of them and put them both back in the public eye.

There is another problem with Leary's book: the Phil Graham anecdote. In his book, Leary has Mary tell him that the cat was out the bag as far as her and JFK were concerned. The reason was that a well-known friend of hers had blabbed about them in public. This is an apparent reference to Post owner Phil Graham's outburst at a convention in Phoenix, Arizona in 1963. This famous incident (which preceded his later alleged mental breakdown) included - according to Leary - a reference to Kennedy and Mary Meyer. The story of Graham's attendance at this convention and what he did and said has been described in different ways in different books. Unfortunately for Leary, his dating of the convention does not jibe with any that I have seen. In 1986, Tony Chaitkin tracked d

Charter, the United Nations
Security Council should have soundly condemned the United States and the United Kingdom for their naked aggression against Iraq, and have demanded their immediate withdrawal from that victim U.N. member state, together with the payment of reparations to Iraq for their joint and severable aggression. Chapter VII of the United Nations Charter mandates that the Security Council act immediately and effectively to prevent, repress, and reverse "threats to the peace, breaches of the peace, and acts of aggression." By contrast, from August 2002 through March 2003 the Member States of the U.N. Security Council did not lift one finger to save Iraq from the obviously oncoming U.S./U.K. aggression. Indeed, Security Council Resolution 1441 of 8 November 2002 was originally drafted to facilitate the U.S./U.K. aggression against Iraq by issuing a diktat to Iraqi President Saddam Hussein that was deliberately designed to be almost impossible to comply with.45 Standard operating procedure for the United States government going all the way back to its instigation of the 1898 War against Sp

note toward the end that they had access to the
Rockefeller family archives (p. 636). In another book of theirs,
Destructive Generation, they write that the Rockefeller book
began when the pair were soliciting funds to keep Ramparts afloat
(p. 275). This is how they got in contact with the younger
generation of that clan. So when the magazine fell, they went to
work on the family biography with access to people and papers
that no outside, nonofficial authors had before. It is
interesting that, in 1989, the authors wrote that when they
started the Rockefeller book, they were expecting to excavate an
"executive committee of the ruling class" and thereby unlock the
key to the American power elite. But they found that they only
ended up writing about American lives (Ibid). They ended up with
that result because that seems to have been the plan all along.

Towards the end of the book, the authors strike a rather wistful
note, a sort of elegy for a once powerful family that is now
fading into the background (The Rockefellers, p. 626). This is
extraordinary. Consider some of the things the Rockefellers
accomplished in the seventies: they were part of the effort to
quadruple gasoline prices through th

(as we shall see,
Ron Rosenbaum filled this role for the 20th anniversary). The latest edition, with Exner aware of the JFK Act, was done at the beginning of what was originally to be the last year of the Review Board. Smith wrote the piece before the extra year was granted by Congress. Smith's friendliness with Hersh, seems to further this. For according to the ARRB's original timetable, the Vanity Fair piece would arrive at the beginning of its last year and Hersh's attack book in October, right when the Review Board was originally set to shut down. This would make a nice pincers movement with which to smother the Board's serious and blockbuster work amid sexy smears about abortions and Marilyn Monroe (Hersh).

In historical perspective, the Times and Safire, and the Post and Ben Bradlee (who, as we shall see, also embraced Exner) opened the flood gates to all kinds of National Enquirer type stories about JFK's private life. Rumors about Monroe, numerous secretaries, these all started to get tossed about. A prominent one about to be recycled emerged just a year after Exner. It was promulgated again by Bradlee's Post via The National Enquirer.

Mary Meyer

Mary Pinchot was the niece of that early conservationist hero Gifford Pinchot. She married CIA officer, and Allen Dulles prot�g�, Cord Meyer. Mary's sister was named Tony and was married to Ben Bradlee. Mary and Cord divorced in 1956 and he later went on to become a CIA - associated reporter for various papers including the Chicago Tribune. In the fall of 1964, while walkin

ago in Vietnam, Cambodia, and Laos. Class warfare
indeed. Finally, in September 2002 the Bush Jr. administration adopted
and officially approved "the National Security Strategy of the United
States," that was transmitted to the U.S. Congress as a declaration of
official policy by the United States of America, fully embracing this
reprehensible, criminal, and Nazi doctrine of preventive warfare.38 I
will not waste the reader's precious time here analyzing this criminal
document in extenso. But it reads like a Nazi war planning document that
could have been introduced into evidence before the Nuremberg Tribunal.

Certainly its most odious language is: ". . . we recognize that our best
defense is a good offense. . ." In other words, the United States
government has publicly admitted in an official government document that
it is now prepared to wage offensive warfare against its chosen
adversaries around the world irrespective of the requirements of the
United Nations Charter, the Kellogg-Briand Peace Pact, as well as the
Nuremberg Charter, Judgment, and Principles, inter alia. I could file
this official U.S. government document with the International Court of
Justice in The Hague as proof-positive that it is now the official
policy of the United States government to wage criminal wars of
aggression against other U.N. member states in violation of the most
elementary principles of the contemporary international legal order that
would be too numerous to list here. What lawyers call an "Admission
Against Interest." Basically, the Bush Jr. administration has officially
incriminated the United States of America under international law and
practice. The arrogance of Power! Which usually spells their downfall.
Even more disturbingly, while it was publicly campaigning for a war of
aggression against Iraq, in December of 2002 the Bush Jr. administration
released its so-called "National Strategy to Combat Weapons of Mass
Destructio

" is the technical expression for a violation of the
law of war by any person or persons, military or civilian. Every
violation of the law of war is a war crime.

500. Conspiracy, Incitement, Attempts, and Complicity

Conspiracy, direct incitement, and attempts to commit, as well as
complicity in the commission of, crimes against peace, crimes against
humanity, and war crimes are punishable.

These prohibitions of U.S. Army Field 27-10 (1956) apply directly to
President Bush Jr. in his constitutional capacity as "Commander-in-Chief
of the Army and Navy of the United States" under Article 2, Section 2,
Clause 1 of the United States Constitution. They also apply to his
subordinates in the military chain-of-command: Vice President Cheney,
Secretary of War Rumsfeld, Deputy Secretary of War Wolfowitz, etc. So
even in accordance with the terms of U.S. Army Field Manual 27-10
itself, Bush Jr., Cheney, Rumsfeld, and Wolfowitz, inter alia, are
guilty of committing a Nuremberg Crime against Peace for their war of
aggression against Iraq in violation of the United Nations Charter and
the Kellogg-Briand Peace Pact, at a minimum. The same conclusion applies
to Secretary of State Colin Powell, National Security Adviser
Condoleezza Rice, C.I.A. Director George Tenet, the pro-Israeli Neo-Con
Straussian cabal, and other high-level Bush Jr. administration officials
dealing with foreign affairs, "defense" and "intelligence," who plotted,
planned, conspired, promoted, incited, as well as aided and abetted this
criminal war against Iraq. U.S. Army Field Manual 27-10 (1956) makes it
quite clear that these prohibitions of international criminal law apply
to everyone, whether civilians or military personnel.

for the United States government going all the way back to its instigation of the 1898 War against Spain in order to steal the latter's colonial Empire.46

The government of the United States of America commenced the 19th Century by stealing a Western Empire from the American Indians and then ethnically cleansing them - "manifest destiny."47 The American government started the 20th Century by stealing a colonial Empire from Spain and then conducting a near genocidal war against the Philippino People - "a place in the sun." The U.S. government opened the 21st Century by trying to steal a hydrocarbon empire from the Muslim States and Peoples of Eurasia - "a war against international terrorism." But this latest transgression could very well prove to be the definitive step of "imperial overstretch" that will break the back of the American Empire both abroad and at home.48 In 1991 the mighty Soviet Empire collapsed like a house of cards after a decade of "imperial overstretch" in Afghanistan. Like the former Soviet Union, the United States of America itself is an imperial house of cards built upon the backs of Indigenous Peoples and Peoples of Color.49 The Bush Jr. administration's aggressions against and occupations of Afghanistan and Iraq could very well generate a reverse domino effect: ". . . they all fall down." The United States of America is not immune to the laws of history.
Prostitution of and by the United Nations

-Kennedy's New York apartment-is in the Reeves book.
In other words, it is all too stale and pat, with none of the twists or turns that happen in real life. Secondly, are we to truly believe that the Kennedys would put their name to a document so that a woman blackmailing them would have even more power to blackmail them in the future? Or was that to lead into why the Kennedys had her killed?
Hersh has leapt so enthusiastically into the "trash Kennedy" abyss that these questions never seem to have bothered him. Anson depicts him as waving the documents over his head at a restaurant and shouting, "The Kennedys were...the worst people!" Lex Cusack showed them to Hersh a few at a time, wetting his appetite for more at each instance. Hersh then used the documents to get Little, Brown to give him $250,000 more and to sell ABC on a documentary.

Jennings said on the 20/20 segment that the flaw in the documents was in the typing part of them and not the actually penmanship. As subsequent facts have shown, this is not actually true. Linda Hart, one of the handwriting analysts hired by ABC (who was slighted on the program) later said that there were indications of "pen drops" in John Kennedy's signature, i.e. someone stopped writing and then started up again, a sure indication of tracing. Also, when I talked to Greg Schreiner, president of a Monroe fan club in Los Angeles, he told me that the moment he saw Monroe's signature, he knew it was not hers. Interestingly, he had met with Hersh this summer. Hersh had told him about the documents and Greg asked to see them. Hersh refused.

Another interesting aspect of the exposure of Hersh's "bombshell" was aired in the New York Times on September 27th. In this story, Bill Carter disclosed that there were doubts expressed about the documents by NBC to Hersh many months ago. Warren Littlefield, an NBC executive, said that Hersh had tried to

wisdom and widespread propaganda, it was the
Bush Jr. administration and the Tony Blair government which perpetrated an "armed attack" against Iraq and thus triggered Iraq's "inherent right" of individual and collective self-defense under U.N. Charter article 51. Not surprisingly, no U.N. Member State came to the defense of Iraq. Rather, Iraq became the first victim of this Nazi Doctrine of Preventive Warfare propounded by Bush Jr. and Tony Blair. From the perspective of international legal history, it is Bush Jr. and Blair who constitute the real "axis-of-evil"- along the lines of Hitler and Mussolini. In this regard, Article 6 of the 1945 Nuremberg Charter provides in relevant part as follows: . . . . The following acts, or any of them, are crimes coming within the jurisdiction of the Tribunal for which there shall be individual responsibility: (1) Crimes against peace: namely, planning, preparation, initiation or waging of a war of aggression, or a war in violation of international treaties, agreements or assurances, or participation in a common plan or conspiracy for the accomplishment of any of the foregoing; . . . . Leaders, organizers, instigators and accomplices participating in the formulation or execution of a common plan or conspiracy to commit any of the foregoing crimes are responsible for all acts performed by any persons in execution of such plan.

To the same effect is the Sixth Principle of the Principles of International Law Recognized in the Charter of the Nuremberg Tribunal and in the Judgm

I see a lot of circuit boards each week thru work and many of them
still use carbon comp resistors. I dont think they are near extinction
but the demand for them has slowed down quite a bit.

I always heard carbon comps were better in radio and audio circuits
because of their lack of or very low inductance as opposed to carbon
composition which use a spiral of conductive material around a ceramic
core which acts as a small inductor.........

part of a continuum.

The Right and the Kennedys

There can be no doubt that the right hated the Kennedys and Martin Luther King. There is also little doubt that some who hated JFK had a role in covering up his death. One could use Secret Service agent Elmer Moore as an example. As revealed in Probe (Vol. 4 No. 3, pp. 20-21), Moore told one Jim Gochenaur how he was in charge of the Dallas doctors testimony in the JFK case.

One of his assignments as liaison for the Warren Commission seems to have been talking Dr. Malcolm Perry out of his original statement that the throat wound was one of entry, which would have indicated an assassin in front of Kennedy. But another thing Gochenaur related in his Church Committee interview was the tirade that Moore went into the longer he talked to him: how Kennedy was a pinko who was selling us out to the communists. This went on for hours. Gochenaur was actually frightened by the time Moore drove him home.

But there is another more insidious strain of the rightwing in America. These are the conservatives who sometimes disguise themselves as Democrats, as liberals, as "internationalists."

This group is typified by men like Averill Harriman, Henry Stimson, John Foster Dulles and the like. The common rubric used to catalo

co-author, and later literary executor Joseph Cropsey. Based upon my personal experience as an alumnus of Chicago's Political Science Department (A.B., 1971, in Political Science), I concur completely with Professor Drury's devastating critique of Strauss. I also agree with her penetrating analysis of the degradation of the American political process that has been inflicted by Chicago's Straussian Neo-Con cabal.3

The University of Chicago routinely trained me and innumerable other students to become ruthless and unprincipled Machiavellians. That is precisely why so many neophyte Neo-Con students gravitated towards the University of Chicago or towards Chicago Alumni at other universities. Years later, the University of Chicago became the "brains" behind the Bush Jr. Empire and his Ashcroft Police State. Attorney General John Ashcroft received his law degree from the University of Chicago in 1967. Many of his lawyers at the Bush Jr. Department of Injustice are members of the right-wing, racist, bigoted, reactionary, and totalitarian Federalist Society (aka "Feddies"),4 which originated in part at the University of Chicago. Feddies wrote the USA Patriot Act (USAPA) I and the draft for USAPA II, which constitute the blueprint for establishing an American Police State.5 Meanwhile, the Department of Injustice's own F.B.I. is still covering up the U.S. governmental origins of the post 11 September 2001 anthrax attack on Washington D.C. that enabled Ashcroft and his Feddies to stampede the U.S. Congress into passing USAPA I into law.6

Integrally related to and overlapping with the Feddies are members of the University of Chicago "School" of

administration wanted to portray
the incident as an example of Soviet barbarity (shades of
Basulto's Brothers to the Rescue). They, and specifically Jeanne
Kirkpatrick, treated the downing as a great propaganda victory.
In his book, The Target Is Destroyed, Hersh ended up siding with
the administration.

Which brings us to the nineties. Everyone knows that the broad
release of Oliver Stone's JFK in 1992 put the Kennedy
assassination back into play. The pre-release attack against the
film was unprecedented in movie history. That's because it was
more than just a movie. It was a message, with powerful political
overtones that dug deeply into the public psyche: a grand
political conspiracy had killed the last progressive president.

That Vietnam would have never happened if Kennedy had lived. That
JFK was working for accommodation with Castro at the time of his
death. That the country has not really been the same since.
The preemptive strike was successful in slowing up the film's
momentum out of the starting block. But the movie did increase
the number of people who believe the case was a conspiracy into

phrase: muddying the
waters. This means that by confusing and confounding the listener with diverse and prolific amounts of information, the main point becomes obfuscated. Since none of the Mafia plots succeeded, one could claim they were ineffectual. The huge amount of publicity garnered by them could eventually be deflected onto the Mob's role in them and not the Agency's. The AM/LASH plots, exposed in even more copious documentation, could be used in a similar way.

If Castro knew about these plots within his midst, couldn't he then claim turnabout and use the same tactics by employing a Communist in the U.S. to kill Kennedy? This, or a combination of the two, has been what suspect writers like Jean Davison and Jack Anderson have been foisting on the public for years.

The Establishment Takes Some Hits

The political fallout from the Church Committee was quite intense. The CIA took quite a few hits, though it emerged intact.

Eastern Establishment-GOP mainstay Allen Dulles was implicated in the authorization of two assassination plots (Lumumb

the Kellogg-Briand Peace Pact,
otherwise known as the Pact of Paris.55 Despite the fact that the United States was not a Member of the League of Nations, nevertheless the League of Nations endorsed the Stimson Doctrine with respect to the Japanese aggression against China and in order to secure the non-recognition Japan's establishment of its puppet-state of "Manchuko" in Manchuria. Furthermore, on 11 March 1932 the League of Nations Assembly passed a Resolution officially adopting the Stimson Doctrine in the following language: "[I]t is incumbent upon the members of the League of Nations not to recognize any situation, treaty, or agreement which may be brought about by means contrary to the Covenant of the League of Nations or to the Pact of Paris."

The Stimson Doctrine and its subsequent endorsement by the League of Nations became the origins of the elemental international legal principle that the world community of states will not recognize any fruits flowing from aggression. Yet that is precisely what the U.N. Security Council did in its Resolution 1472 (2003) on Iraq. Historically it would be as if the League of Nations had adopted a resolution ratifying Japan's belligerent occupation of Manchuria; or Hitler's belligerent occupation of Czechoslovakia and Poland; or Mussolini's belligerent occupation of Ethiopia; or Stalin's belligerent occupation of Lithuania, Latvia, and Estonia; etc. For all of its ineffectiveness, even the League of Nations did not stoop so low as the United Nations Security Council did in its Resolution 1472 (2003) on Iraq

Board which would then
recommend reforms in CIA control of covert operations. There is
no hint, so pregnant in Davis' phrasing, that anything about
assassination was discussed.

Womanizer and Warmonger?

One of the more startling sections of the Davis book is his
treatment of Judith Exner. From the above, one would guess that
he thoroughly buys into the 1977 Exner-Demaris book. He does and
he mentions her name quite often. What is surprising is that he
goes even further. Apparently, Davis realizes his jerry-built
apparatus of Bissell-Helms, and adulteration of the record will
not stand scrutiny. So he calls up Ovid Demaris, coauthor of
Judith Exner: My Story (p. 319). From this phone call, Davis is
informed that Exner lied in the book. She did tell Kennedy about
her affair with Sam Giancana and JFK got jealous. From this,
Davis builds another scaffolding: he now postulates that Exner
was Kennedy's conduit to the CIA-Mafia plots to kill Castro (Ibid
p. 324). What is breathtaking about this is that this is
something that not even Exner had uttered yet, at least not for
dissemination. And she won't until her get-together with Kitty
Kelley in the February 1988 cover story for People. This curious
passage leads one to think that Davis may have planted the seed
from which the Kelley story sprouted.

To go through the entire Davis book and correct all the errors of
fact, logic, and commentary would literally take another book.
But, in line with my original argument about anti-Kennedy
biography, I must point out just two parts of Davis' discussion
of JFK's Vietnam policy. The author devotes a small chapter to
this subject. In his hands, Kennedy turns into a hawk on Vietnam.

Davis writes that on July 17, 1963, Kennedy made "his

Wolfowitz appeared as Bloom's prot�g� Philip Gorman, leaking national security secrets to his mentor during the Bush Sr. war against Iraq. Strauss hovered around the novel as Bloom's mentor and guru Professor Davarr. Strauss/Davarr is really the �minence grise of Ravelstein. With friends like Bellow, Bloom did not need enemies. On the basis of Ravelstein alone, Wolfowitz warrants investigation by the F.B.I.

Just recently the University of Chicago officially celebrated its Bush Jr. Straussian Neo-Con cabal, highlighting Wolfowitz Ph.D. '72, Ahmad Chalabi, Ph.D. '69 (the CIA's Iraqi puppet), Abram Shulsky, A.M. '68, Ph.D. '72 (head of the Pentagon's special "intelligence" unit), Zalmay Khalilzad, Ph.D. '79 (Bush Jr's roving pro-consul for Afghanistan and then Iraq), as well as faculty members Bellow, X '39, and Bloom, A.B. '49, A.M. '53, Ph.D. '55, together with Strauss. According to the University of Chicago Magazine, Bloom's rant "helped popularize Straussian ideals of democracy."16 It is correct to assert that Bloom's book helped to popularize Straussian "ideas," but they were blatantly anti-democratic, Machiavellian, Nietzschean, and elitist to begin with. Only the University of Chicago would have the unmitigated Orwellian gall to publicly assert that Strauss and Bloom cared one whit about democracy, let alone comprehended the "ideals of democracy." Does anyone seriously believe that a pro-Israeli Chicago/Strauss/Bloom product such as Wolfowitz could care less about democracy in Iraq? Or for that matter anyone in the Bush Jr. administration? After they stole the 2000 presiden

move even the world weary Claude
Rains:
Now that I know I'm dying and nothing more can happen to me,
I want to be completely honest. I don't think I should have
to die with the secret of what I did for Jack Kennedy, or
what he did with the power of his presidency. I feel that I
am finally free of the past.

Exner's 1997 Version

I hope Exner sued her doctor, because ten years later she's still
with us. She now turns up in the pages of the January 1997 Vanity
Fair which, unembarrassed, again bills her as "facing her death."

This time she was teamed with another questionable expert on
Kennedy's Cuba policy - Hollywood gossip columnist Liz Smith. And
evidently, the previous fear of death wasn't enough to squeeze
the whole story out of her. She still has a few goodies to add.

The choice of Smith in 1997 is as revealing as Demaris in 1977
and Kelley in 1988. Smith writes for the New York Post, which is
literally a tabloid in both format and approach. Like Kelley,
Smith is a big fan of Sy Hersh. In fact, her column has released
several "teaser" items about his upcoming book. In t

the Rockefellers (Thy
Will be Done pp. 538-542). For those sins, and encouraging others to follow them, they must suffer the fate of the Undead. And Marilyn Monroe must be thrown into that half-world with them. At the hands of Bob Loomis' pal, that "liberal" crusader Sy Hersh.

As Anson says, he must just want the money.

Current events, most notably a past issue of Vanity Fair, and the upcoming release of Sy Hersh's new book, extend an issue that I have dealt with in a talk I have done several times around the country in the last two years. It is entitled "The Two Assassinations of John Kennedy." I call it that because there has been an ongoing campaign of character assassination ever since Kennedy was killed.

In the talk to date, I've dealt primarily with the attacks on Kennedy from the left by Noam Chomsky and his henchman Alexander Cockburn which occurred at the time of the release of Oliver Stone's JFK. But historically speaking, the attacks on the Kennedys, both Jack and Robert, have not come predominantly from the left. The attacks from the right have been much more numerous. And the attacks from that direction were always harsher and more personal in tone. As we shall see, that personal tone knows no limits. Through papers like the New York Times and Washington Post, the attacks extend into the Kennedys' sex lives, a barrier that had not been crossed in post-war mainstream media to that time. all along. With Liz
Smith as the moderator, satire is impossible in this field.

But down deep, submerged but still present, there is a resistance to all this. The public knows something is wrong. Two years ago, CBS and the New York Times conducted a poll which asked the respondents: If you could pick a President, any President, which one would you choose to run the country today? The winner, in a landslide, was John F. Kennedy who doubled the tally of the second place finisher. In 1988, Rolling Stone surveyed the television generation, i.e. the below forty group, on their diverse opinions and attitudes. Their two most admired public leaders were Bobby Kennedy and Martin Luther King, dead twenty years before, when many of those polled were infants or not even born. This holds not just in America. In Pete Hammill's 1995 book Piece Work, he relates an episode in his life when his car broke down in the Mexican countryside. He walked to a poor, Third World style hut which had no amenities except a phone. Before he left, he thanked the native Mexicans who lived there and took a look around the dilapidated, almost bare interior. The only decorations he saw were a plaster figurine of Che Guevara, and near it, a photo of John Kennedy.

It's that international Jungian consciousness, however bottled up, ambiguous, uncertain, that must be dislodged. In a sense, this near-maniacal effort, and all the money and effort involved in it, i

mysterious reason America
had to attack, invade, and occupy Afghanistan. All of the Bush Jr. apparatchiks are still lying about, dissembling over, and covering up who ultimately was responsible for the terrible tragedy of September 11th , and why no one in the Bush Jr. administration acted to prevent it despite numerous, repeated, and widespread warnings beforehand. The Pearl Harbor cover-up all over again.24

In any event, the Bush Jr. wars of aggression against Afghanistan and Iraq must be understood as part of a major energy resource power grab by the United States government to control about two-thirds of the world's oil and natural gas supplies located around this Eurasian heartland, which had been contemplated and planned by the U.S. Power Elite for quite some time. Going all the way back to the Kissinger threat and plan to steal the Arab oil fields in reaction to the 1973 Arab oil embargo of the West that was assisting Israel in its war to hold on to the Arab lands Israel had illegally stolen in its 1967 aggressions against the surrounding Arab states and peoples.25 The collapse of the Warsaw Pact and the disintegration of the Soviet Union gave the U.S. Power Elite the opportunity to put their Machiavellian scheme for world economic hegemony into operation.26 In other words, the Bush Jr. wars of aggression against Afghanistan and Iraq are part of a longstanding American pla

what he did later in 1976. In August of 1961, Truitt had called Bradlee and said he had evidence that Kennedy had been previously married before his wedding to Jackie, and that this fact had been covered up. Both Bradlee and Truitt pursued the story. But before they printed it they asked Kennedy about it. He referred them to Pierre Salinger, his press secretary. Salinger had already heard the charge from rightwing commentator Fulton Lewis. He had all his points lined up and proved the story false. Bradlee's account in Conversations With Kennedy (pp. 43-49) seems to suggest that Truitt and Bradlee still worked on the story after they were shown it was wrong.

Also intriguing is a flourish added in Rosenbaum's version, which appears heavily reliant on the Truitts and Angletons as sources. Rosenbaum writes that Mary's diary, although usually laid upon her bedroom bookcase, was found in a locked steel box in her studio. Rosenbaum doesn't probe as to why it was not found in its usary&resting place. The locked steel box is not a part of any other version of the story I know,

people like Kelley, Rivera,
and Exner commenting, the Kennedys get inserted into a giant
Torbitt Document of modern history. With people like Davis
translating for them, RFK does not pursue Giancana, they are
actually pals in MONGOOSE. The Kennedys agree with the Joint
Chiefs: we should invade Cuba. And then escalate in Vietnam.
Disinformation feeds on disinformation, and whatever the record
shows is shunted aside as the tabloid version becomes "accepted
history," to use Davis' phrase (p. 290). The point of this
blurring of sources is that the Kennedys, in these hands, become
no different than the Dulles brothers, or Nixon, or Eisenhower.
In fact, Davis says this explicitly in his book(pp. 298-99). As
I noted in the last issue, with Demaris and Exner, the Kennedys
are no different than Giancana. And once this is pounded home,
then anything is possible. Maybe Oswald did work for Giancana.
And if RFK was working with Sam, then maybe Bobby unwittingly had
his brother killed. Tragic, but hey, if you play with fire you
get burned. Tsk. Tsk.

But beyond this, there is an even larger gestalt.

footnotes. So are people like Haspiel and Jeane Carmen. Carmen is another late-surfacing intimate of Monroe. Carmen professes to have been Monroe's roomie when she lived on Doheny Drive, before she bought her famous home in Brentwood. She began circulating her story after Slatzer did his bit. Of course, Marilyn's neighbors at Doheny, and her other friends, don't recall her (Spoto p. 472). But Summers welcomes her because she provides sexy details about Marilyn's torrid romance with Bobby. A third peg in Summers' edifice is Ralph de Toledano. Summers describes him as a "Kennedy critic" in the paperback version of his book (p. 453). This is like saying that Richard Helms once did some work for the CIA. De Toledano was a former OSS officer who Bill Donovan got rid of because he was too much of a rabid anticommunist. After the war, he hooked up with professional Red baiter Isaac Don Levine of the publication Plain Talk. Levine was another spooky journalist whom Allen Dulles, while he was on the Warren Commission, considered using to write incriminating articles about Oswald (Peter Scott, Deep Politics and the Death of JFK p. 55). Later on, de Toledano found a home at former CIA officer and E. Howard Hunt pal Bill Buckley's National Review. If one were to translate the Summers trio of Slatzer, Carmen, and de Toledano to the JFK case, one could say that he wedded Ricky White to Beverly Oliver and then brought in a journalist like, say Hugh Aynesworth, to cinch his case. And the things Summers leaves out are as important as what he puts in. For instance, he omits the facts that her psychiatrist did not know the drugs that her internist was prescribing; the weird nature and background of her house servant Eunice Murray; and her pending recon

law: (1) Crimes against peace: (1) Planning, preparation, initiation or waging of a war of aggression or a war in violation of international treaties, agreements or assurances; (2) Participation in a common plan or conspiracy for the accomplishment of any of the acts mentioned under (i). . . . . Pursuant to this Nuremberg Doctrine, the Bush Jr./Blair war against Iraq clearly qualified as an "aggression" and an "act of aggression" within the meaning of customary international law as set forth, for example, by the United Nations General Assembly in its Resolution 3314 (XXIX) on the Definition of Aggression (1974), and therefore a Crime against Peace. Furthermore, in addition to being a war of aggression, the Bush Jr./Blair war against Iraq also violated "international treaties, agreements or assurances," such as and most importantly the United Nations Charter and the Kellogg-Briand Peace Pact, both of which Iraq is contracting party to along with the United States and the United Kingdom. In other words, the Bush Jr./Blair war against Iraq constituted a Nuremberg Crime against Peace on both counts.

Finally, U.S. Department of the Army Field Manual FM 27-10, The Law of Land Warfare (1956) expressly incorporates this Nuremberg Doctrine of Crimes under International Law as follows: Section

which is just what LBJ and
John Connally attempted to do in 1960. The myopic authors save
their ire for Kennedy and vent none on Johnson or a potentially
rabid political culture on this issue.

The second major area of focus is Kennedy's sex life. The authors
excuse this preoccupation with seventies revelations, an apparent
reference to Exner, Meyer, and perhaps Monroe (p. 667). Kennedy
seems to have been attractive to females. He was appreciative of
their overtures. There seems to me to be nothing extraordinary
about this. Here we have the handsome, tall, witty, charming son
of a millionaire who is eligible and clearly going places. If he
did not react positively to all the attention heaped on him, I am
sure his critics would begin to suggest a "certain latent
homosexual syndrome." But what makes this (lengthy) aspect of the
book interesting is that when the Blairs ask some of Kennedy's
girlfriends what his "style" was (clearly looking for juicy sex
details), as often as not, the answer is surprising. For

the
area; the desire of Ramsdell to demonstrate the
effectiveness of his operations; the belief shared by all
the principals that everyone living in Son My was staying
there by choice because of Communists...and the basic
incompetence of many intelligence personnel in the Army-all
these factors combined to enable a group of ambitious men to
mount an unnecessary mission against a nonexistent enemy
force, and somehow to find the evidence to justify it all.

I won't go into all the things that must be true for Hersh to be
correct. I will add that in the definitive book of the subject,
The Phoenix Program, My Lai is described as part of the
Colby/Shackley operation.

After My Lai, the New York Times assigned Hersh to the Watergate
beat. The paper was getting scooped by Woodward and Bernstein at
the Washington Post. For a "crack" reporter, Hersh did not
distinguish himself, especially in retrospect. He basically
followed in the footsteps of the Post. i.e. the whole complicated
mess was a Nixon operation; there was no real CIA involvement;
whatever Hunt and McCord did, no matter how weird and
questionable, they did for the White House. As late as the
December 12, 1992 edition of The New Yorker, Hersh was still
hewing to this line in his article entitled "Nixon's Last Cover
Up." In spite of this, at times Hersh actually did favors for the
White House. As Ron

this. (We can't
reproduce it because the copy sent to us is so poor). I forwarded it to Washington researcher Peter Vea. He agreed it was highly unusual. To play it safe, I then sent a copy to former intelligence analyst John Newman. He said that he had seen such reports. What he thought was wrong with it was that there were things in it that should have been redacted that weren't and things exposed that should have been blacked out. For instance, there is a phrase as follows, "a secret air base for the purpose of inspecting [things] from outer space." Newman notes that the brackets around the word "things" denote that it had been previously redacted. It should not have. The words "outer space" should have been redacted and they never were. On the basis of this and other inconsistencies, he decided it was a "good" forgery from someone who knew what they were doing. He told PBS this four years ago when they showed it to him. The fact that this document purportedly revealing sensitive information was exposed in 1993 when he saw it, before the JFK Act when into effect, justifies even more suspicion about its origin and intent.

Spoto's book adds more to the suspicion about the document, and perhaps the information in Capell's pamphlet. Spoto notes that on August 3, 1962, the day the above memo was distributed, Kilgallen printed an item in her column saying that Marilyn was "vastly alluring to a handsome gentleman who is a bigger name than Joe DiMaggio" (p. 600). Spoto notes the source for Kilgallen's story as Howard Rothberg, the man named in the memo. This is interesting for more than one reason. First, Spoto writes that Rothberg was "a New York interior designer with no connection at all to Marilyn or her circle." (Ibid.) This means that he was likely getting his "information" through a third, unnamed source. Second, Rothberg's name, and this is part of the sensitive information referred to above, is exposed in the document. This is extraordinary

acts of aggression." By contrast, from August 2002 through March 2003 the Member States of the U.N. Security Council did not lift one finger to save Iraq from the obviously oncoming U.S./U.K. aggression. Indeed, Security Council Resolution 1441 of 8 November 2002 was originally drafted to facilitate the U.S./U.K. aggression against Iraq by issuing a diktat to Iraqi President Saddam Hussein that was deliberately designed to be almost impossible to comply with.45 Standard operating procedure for the United States government going all the way back to its instigation of the 1898 War against Spain in order to steal the latter's colonial Empire.46

The government of the United States of America commenced the 19th Century by stealing a Western Empire from the American Indians and then ethnically cleansing them - "manifest destiny."47 The American government started the 20th Century by stealing a colonial Empire from Spain and then conducting a near genocidal war against the Philippino People - "a place in the sun." The U.S. government opened the 21st Century by trying to steal a hydrocarbon empire from the Muslim States and Peoples of Eurasia - "a war against international terrorism." But this latest transgression could very well prove to be the definitive step of "imperial overstretch" that will break the back of the American Empire both abroad and at home.48 In 1991 the mighty Soviet Empire collapsed like a house of cards after a decade of "imperial overstretch" in Afghanistan. Like the former Soviet Union, the United States of America itself is an imperial house of cards built upon the backs of Indigenous Peoples and Peoples of Color.49 The Bush Jr. administration's aggressions against and occupations of Afghanistan and Iraq could very well generate a reverse domino effect: ". . . they all fall down." The United States of America is not immune

Post, and New Republic all gave
the book prominent and glowing reviews. In the latter case,
Martin Peretz placed the book on the August 27, 1984 New Republic
cover under the title "Dissolute Dynasty." He then got longtime
Kennedy basher Midge Decter to write a long review that branded
the saga "a sordid story." Right after this ecstatic reception,
in 1985, Horowitz and Collier landed a feature story in the
Washington Post as "Lefties for Reagan." Two years later, the
pair went on a USIA-State Department sponsored tour of Nicaragua.

This was at a time when the CIA was dumping millions into that
country in a huge psychological and propaganda war effort. That
same year, with lots of foundation money, the pair arranged a
"Second Thoughts" conference in Washington. This was basically a
meeting of "reformed" sixties liberals bent on attacking that
decade and anyone who wished to hold it up as an era of
excitement and/or progressive achievement. Peretz attended that
conference. Later, they sponsored another conference entitled
"Second Thoughts on Race in America." This might have been called
the Washington Post take on race in the eighties since it
featured such Kay Graham-Ben Bradlee employees as Richard Cohen,
Juan Williams, and Joe Klein. Today, these two see themselves as
armed guards protecting America from any renaissance of sixties
activism after Reagan. They are quite open about this and
Kennedy's role in it in Destructive Generation: "Just as
Eisenhower's holding action in the Fifties led to JFK's New
Frontier liberalism in the Sixties...so the clamped-down
Reaganism of the Eighties has prec

out of her. She still has a few goodies to add.

The choice of Smith in 1997 is as revealing as Demaris in 1977 and Kelley in 1988. Smith writes for the New York Post, which is literally a tabloid in both format and approach. Like Kelley, Smith is a big fan of Sy Hersh. In fact, her column has released several "teaser" items about his upcoming book. In the past she has also flacked for Tony Summers. What do those two writers have that other Kennedy researchers, say John Newman, do not? They have both pushed the angle that the Kennedys were somehow involved with the death of Marilyn Monroe. Smith dutifully mentions both authors in her Vanity Fair piece and writes, as fact, that RFK was at Marilyn's the day she died. Exner herself claims that Summers has offered to supply a new "foreword should she write another book" and Smith sent Exner to see Hersh who, predictably, also endorses her story.

In the article, Smith seems conscious of her questionable qualifications to address the serious subjects of Kennedy and Cuba and the Church Committee. Throughout, she sprinkles in little aphorisms to neutralize any attacks. She quotes Oscar Wilde (not famous for his history books) when she says that history is merely yesterday's gossip. Later on she notes that "today's goss

is necessary to note a bit about Ben Bradlee's
actions in both the Exner and Meyer stories. Bradlee is
essential, not just because of his personal involvement in the
matters under discussion, but because he was the editor of the
Washington Post in 1976 when the Enquirer broke the story. As
with the Exner story, once the Meyer story broke, the Post gave
it its imprimatur by filling out certain elements of the story
and giving it respectable, mainstream play. Thirty five years
later, the essentials I have drawn out above are really all that
can be known for certain about this tale. All the remaining
details are hazy, confusing, or contested. This is not surprising
since two of the people involved in shaping the story are CIA
counterintelligence chief James Angleton and Ben Bradlee.

Relating to the Kennedy murder, much has been written about the
former (and more will come in Probe). Little has been written
about Bradlee (see the sidebar on page 30).

Bradlee, JFK & Meyer

Bradlee's background, and his need to hide it, are important in
his role with Kennedy and in the origin and evolution of the Mary
Meyer story. Bradlee has always tried to suggest that he had a
fairly normal, middle-class WASP background in Massachusetts. In
fact, in his book Conversations With Kennedy, there is a charming
subtext by Bradlee implying that Kennedy comes from a high social
strata to which Bradlee can't relate. For instance, Bradlee makes
Kennedy out to be a fashion plate, changing shirts two or three
times a day. Bradlee has to remind him that common folk sometimes
wear the same shirt two days in a row. Like he does. When he and
Kennedy are talking about the tax code, they commiserate over
there not being enough tax breaks for middle class people like
Bradlee.

Having swallowed this, I was surprised to learn that Bradlee's
family spent each summer with the Astors in Main

the Church Committee.

Exner To The Rescue

The committee had found that Hoover had a meeting with President Kennedy on March 22, 1962. Through his investigation of Sam Giancana, the Director had discovered that an acquaintance of his - Campbell - had called Kennedy at the White House on numerous occasions. Once Kennedy was told of this, the calls to the White House stopped. Campbell's name was included in the first draft of the report. But in deference to her privacy and the fact that she denied ever communicating any messages between the two, the committee - by a unanimous vote - did not name her in the final draft. She was referred to there as a "close friend." Some staffers, perhaps the CIA plants to which Marchetti referred, leaked her name to the Washington Post. Significantly, four days before the final report was issued, the Post printed her name in an article about her. This did the trick. The Times and Post used this to weaken the impact of Church's report. No less than two dozen stories were printed in those two newspapers about Exner.

Altogether, those two establishment bastions kept her name in the papers for six months. William Safire of the New York Times, a former Nixon speechwriter, screamed there could be no "whitewash" of this matter and made it his personal agenda to use Exner as JFK's connection to the plots. He himself wrote five columns on the subject. Time magazine did a feat

Safire struck back
through Judith Exner.

But the plots against Castro took center stage. They seemed full of sensational, fantastic revelations that seemed right out of a James Bond movie: poison pills, exploding sea shells, contaminated diving suits etc. But no matter how hard they tried, the media moguls (New York Times, Washington Post, Los Angeles Times) could not tie the Kennedys to them. This didn't seem fair in light of all the mud heaped on Eisenhower, Dulles and the Watergated Nixon. Unfortunately, not even the CIA's 1967 Inspector General's report, commissioned by Richard Helms for LBJ, implicated the Kennedys.

No Authorization

The Inspector General's Report (which is quite thorough and methodical), and the Church Committee's report dealing with assassinations (entitled Alleged Assassination Plots Involving Foreign Leaders) are both quite clear on this point. For instance, when the former report was analyzing the published details of a Drew Pearson-Jack Anderson 1967 leak about the Castro plots, it labeled the Pearson-Anderson insinuation about Robert Kennedy's "approval" of the plots as "Not true." It later goes on to say that the role played by Robert Kennedy in Pearson's story is "a garbled account." What had happened was that through the FBI's discovery of a wiretapping favor done for Maheu's contact in the plots (Chicago mobster Sam Giancana) Hoover had learned of the CIA-Mob link and forwarded his knowledge to Robert Kennedy. Kennedy turned it over to Courtney Evans, his FBI liaison, and asked him to get back with all the known details. He was finally briefed on it in May of 1962. There can be no doubt about his reaction. As one of Bobby's CIA briefers stated: "If you have seen Mr. Kennedy's eyes get steely and his jaw set and his voice

been cut by a third without losing anything
of quality or substance. The book is heavily reliant on
interviews which are presented in the main text. Some of them at
such length-two and three pages-that they give the volume the air
of an oral history. To make it worse, after someone has stopped
talking, the authors tell us the superfluous fact that his wife
walked into the room, making for more excess verbiage (p.60). And
on top of this, the Blairs have no gift for syntax or language,
let alone glimmering prose. As a result, even for an interested
reader, the book is quite tedious.

The Blairs spend much of their time delving into two areas of
Kennedy's personal life: his health problems and his
relationships with the opposite sex. Concerning the first, they
chronicle many, if not all, of the myriad and unfortunate medical
problems afflicting young Kennedy. They hone in on two in order
to straighten out the official record. Previous to this book, the
public did not know that Kennedy's back problem was congenital.
The word had been that it came about due to a football injury.

Second, the book certifies that Kennedy was a victim of Addison's
disease, which attacks the adrenal glands and makes them faulty
in hormone secretion. The condition can be critical in fights
against certain infections and times of phys

seem ways to
bolster a tale that needed to be recycled and souped up before its chinks began to show. Leary's reason for being a part of the effort may be through his association with intelligence asset Liddy. Or it may be because he was never enamored of the Kennedys' approach to the drug problem, which was antagonistic to Leary personally and a lot less liberal in its approach. Leary was quite frank about this in his book High Priest (p. 67) and later in Changing My Mind (pp. 143 ff.). Whatever his motives, Leary's retroactive endorsement is just not credible.

The Split at the Post

In fact, when it comes to Mary Meyer, stories between the same couple are not consistent. As mentioned previously, Bradlee states in his book that Kennedy's name was not in the diary. Yet his wife told The National Enquirer, that although she only looked at it briefly, Kennedy's name was there. According to an interview with writer Debbie Davis, Ben Bradlee once told television personality David Frost that the diary was not even a diary but in fact a sketchbook.

In this regard, Tony Bradlee made a telling comment to the National Enquirer in 1976. In the notes written up from her interview, after she has discussed (with a bit of ambiguity) whether or not Kennedy's name was in the diary, she is quoted as saying: "But the diary was destroyed. I'll tell you that much is true." The suggestion in the last sentence is that everything else is not. Or, at least, the diary's destruction is all she knows for a fact.

If Mary's own sister is not forthright, then who among the rest is? Don't rely on Rosenbaum to find out. He is a friend of both Angleton and the Post. Consider the man who helped him write his 1976 Mary Meyer piece, one Philip Nobile. When I interviewed

guy in court when he shows the judge that
photo of us three sitting here." Finally, Kelley has no questions about a glaring inconsistency in her scenario. In the course of these ongoing meetings, probably at the first one, wouldn't nice guy Sam say, "Jack I really appreciate the dinner, but this is all kind of redundant. See, I'm already working with Bob Maheu at CIA to kill Fidel." Evidently, Exner was so convincing that neither Kelley nor her editors ever entertained any doubts. Or to hopeless cynics like myself, maybe they didn't want to blow the hundred grand they had invested in their cover story.

Kelley did ask one pertinent question. Namely, why did Exner not tell Demaris these startling details back in 1977? Why did she wait eleven years to bare her soul? Exner says she was afraid and needed to protect herself. Unfortunately, this rings a bit hollow since 1) Giancana and Roselli were both dead when she wrote her book, 2) the Church Committee spilled all the beans on the plots to kill Castro in 1975, which 3) leaves only the Kennedys to fear, and its clear she doesn't give a damn about them.

But for those still skeptical, she adds the other (clinching) reason for breaking the silence: her doctor told her she had terminal cancer and she had only 36 months to live. The article ends in a crescendo that would move even the world weary Claude Rains:
Now that I know I'm dying and nothing more can happen to me, I want to be completely honest. I don't think I should have to die with the secret of what I did for Jack Kennedy, or what he did with the power of his presidency. I feel that I am finally free of the past.

Exner's 1997 Version

I hope Exner sued her doctor, because ten years later she's still with us. She now turns up in the pages of t

In fact, Smith adds more of her own. As with
Demaris, one of her aims is to make Exner a victim of the press
so that she can imply that the "liberal media" is "protecting"
the Kennedys. As demonstrated above, this is preposterous. Exner
was a media creation used by that press to pummel the Kennedys
who the Times and Post - and their ally the CIA - never liked. To
camouflage this, Smith claims that after her book came out, the
Exners "fled" to California. Yet, according to Demaris, Exner and
her husband were already in California when he met them to start
work on the book. Smith can actually write the Orwellian
statement that Safire - author of no less than five pro-Exner
columns - "derided" Exner's story. Again, contradicting her book,
Exner now says she never went to bed with Giancana. In fact, in
the Vanity Fair version, the whole scene where he proposes to her
is different from the book. In the revisionist go round the
suggestion is that good Italian Catholics, even though they may
be murdering mobsters, don't believe in premarital sex.

More Hidden History

What are the new revelations about the Kennedys that merited
Exner's meeting with Smith for a catered dinner at the five star
Four Seasons Hotel in Newport Beach? There are two. First, she
forgot to add that Bobby's crimefighting campaign was a mirage.

Not only did he not mind JFK's White House meetings with
Giancana, he encouraged her in arranging them. For Vanity Fair,
she remembers RFK's words to her about the subject:
You know I used to be at the White House having lunch or
dinner with Jack, and Bobby would often come by. He'd
squeeze my shoulder solicitously and ask, "Judy, are you
O.K. carrying those messages for us to Chicago? Do you still
feel comfortable doing it?"
This about the man who had such heavy surveillance on Giancana
that the mobster went to court to stop those six FBI agents from
following him everywhere. Including the putting green of the golf

over all his children is a prime
motif of the book. The second theme that will be followed is the aforementioned female associations. The third repeating pattern the Blairs' established is the use of Kennedy's health problems as some kind of character barometer. That because Kennedy and his circle were not forthright about this, it indicates a covert tendency and a penchant for covering things up.

It would be easy to dismiss The Search for JFK as a slanted book, and even easier to argue that the authors had an agenda. Clay Blair was educated at Tulane and Columbia and served in the Navy from 1943-1946. He was a military affairs writer and Pentagon correspondent for Time-Life from 1949 to 1957. He then became an editor for the Saturday Evening Post and worked his way up to the corporate level of that magazine's parent company, Curtis Publications. Almost all of his previous books dealt with some kind of military figure or national security issue e.g. The Atomic Submarine and Admiral Rickover, The Hydrogen Bomb, Nautilus 90 North, Silent Victory: the U.S. Submarine War Against Japan. In his book on Rickover, he got close cooperation from the Atomic Energy Commission and the book was screened by the Navy Department. In 1969 he wrote a book on the Martin Luther King murder called The Strange Case of James Earl Ray. Above the title, the book's cover asks the question "Conspiracy? Yes or No!" Below this, this the book's subtitle gives the answer, describing Ray as "The Man who Murdered Martin Luther King." To be sure there is no ambiguity, on page 146 Blair has Ray shooting King just as the FBI says he did, no surprise since Blair acknowledges help from the Bureau and various other law enforcement agencies in his acknowledgements.

The Ray book is basically an exercise in guilt through character assassination. This practice has been perfected in the Kennedy assassination field through Oswald biographers like Edward Epstein and Priscilla Johnso

standards inevitably
leads to a blurring of history. With people like Kelley, Rivera, and Exner commenting, the Kennedys get inserted into a giant Torbitt Document of modern history. With people like Davis translating for them, RFK does not pursue Giancana, they are actually pals in MONGOOSE. The Kennedys agree with the Joint Chiefs: we should invade Cuba. And then escalate in Vietnam. Disinformation feeds on disinformation, and whatever the record shows is shunted aside as the tabloid version becomes "accepted history," to use Davis' phrase (p. 290). The point of this blurring of sources is that the Kennedys, in these hands, become no different than the Dulles brothers, or Nixon, or Eisenhower. In fact, Davis says this explicitly in his book(pp. 298-99). As I noted in the last issue, with Demaris and Exner, the Kennedys are no different than Giancana. And once this is pounded home, then anything is possible. Maybe Oswald did work for Giancana. And if RFK was working with Sam, then maybe Bobby unwittingly had his brother killed. Tragic, but hey, if you play with fire you get burned. Tsk. Tsk.

But beyond this, there is an even larger gestalt. If the Kennedys were just Sorenson-wrapped mobsters or C

and the Post and
Ben Bradlee (who, as we shall see, also embraced Exner) opened
the flood gates to all kinds of National Enquirer type stories
about JFK's private life. Rumors about Monroe, numerous
secretaries, these all started to get tossed about. A prominent
one about to be recycled emerged just a year after Exner. It was
promulgated again by Bradlee's Post via The National Enquirer.

Mary Meyer

Mary Pinchot was the niece of that early conservationist hero
Gifford Pinchot. She married CIA officer, and Allen Dulles
prot�g�, Cord Meyer. Mary's sister was named Tony and was married
to Ben Bradlee. Mary and Cord divorced in 1956 and he later went
on to become a CIA - associated reporter for various papers
including the Chicago Tribune. In the fall of 1964, while walking
along the tow path of the C & O Canal in Georgetown, Mary Pinchot
Meyer was murdered by being shot through the face. A suspiciously
acting black man was apprehended nearby and was identified by a
witness as being the nearest person to Meyer before she was
killed. At the trial, the man was acquitted through the efforts
of a very good defense attorney, mainly due to the circumstantial
nature of the case. Many years after Mary's death, the National
Enquirer revealed that she had been a girlfriend of Kennedy.

Before getting into all the details of this story and its
aftermath, it is necessary to note a bit about Ben Bradlee's
actions in both the Exner and Meyer stories. Bradlee is
essential, not just because of his personal involvement in the
matters under discussion, but because he was the editor of the
Washington Post in 1976 when the Enquirer broke the story. As
with the Exner story, once the Meyer story broke, the Post gave
it its imprimatur by filling out certain elements of the story
and giving it respectab

part of the effort to
quadruple gasoline prices through their oil companies; David Rockefeller took part in the effort to get the American government to intervene in Chile in 1973; the Trilateral Commission, which the Rockefellers sponsored, funneled many of its members into the Carter administration; in 1979, Henry Kissinger and David Rockefeller convinced Carter to let the Shah of Iran into the country for medical treatment. The reaction in Iran helped give us Reagan-Bush. The rest, as they say, is history.

In comparing the two books, one is immediately struck by a difference in approach. Whatever the shortcomings of the Rockefeller book, there is a minimal reliance on questionable sources. And the concentration on individual lives very seldom extends into a pervasive search for sex and scandal. This difference extends to even the photos chosen for the two books. The Rockefeller book is fairly conventional with wide or half page group shots or portraits. In the Kennedy book, even the one page of group shots are tiny prints. The rest are wallet-sized head shots that when leafed through, give the impression of mug shots.

The accompanying text is suitable to the photo layout. There

are
Israel-firsters: What is "good" for Israel is by definition "good" for
the United States. Dual loyalties indeed.11

In addition, it was the Chicago Straussian cabal of pro-Israeli Neo-Cons who set up a special "intelligence" unit within the Pentagon that was responsible for manufacturing many of the bald-faced lies, deceptions, half-truths, and sheer propaganda that the Bush Jr. administration then disseminated to the lap-dog U.S. news media12 in order to generate public support for a war of aggression against Iraq for the benefit of Israel and in order to steal Iraq's oil.13 To paraphrase advice Machiavelli once rendered to his Prince in Chapter XVIII of that book: Those who want to deceive will always find those willing to be deceived.14 As I can attest from my personal experience as an alumnus of the University of Chicago Department of Political Science, the Bible of Chicago's Neo-Con Straussian cabal is Machiavelli's The Prince. We students had to know our Machiavelli by heart and rote at the University of Chicago. As for the University of Chicago overall, its biblical Gospel is Allan Bloom's The Closing of the American Mind (1987).15 Of course Bloom was another prot�g� of Strauss, as well as a mentor to Wolfowitz. In his Bloom-biographical novel Ravelstein (2000) Saul Bellow, formerly on the University of Chicago Faculty, outed his self-styled friend Bloom as a hedonist, pederast, and most promiscuous homosexual who died of AIDS. All this was common knowledge at the University of Chicago, where Bloom is still worshiped and his elitist screed against American higher-education still revered on a pedestal. In Ravelstein Wolfowitz appeared as Bloom's prot�g� Philip Gorman, leaking national security secrets to his mentor during the Bush Sr. war against Iraq. Strauss hovered around the novel as Bloom's mentor and guru Professor Davarr. Strauss/Davarr is really the �minence grise of Ravelstein. With friends like Bellow, Bloom did not

worked hard to cover up the true circumstances of
Kennedy's murder. About Exner's motives, I can only speculate.

Will Hersh have her now say that she saw Marilyn with Kennedy and
Giancana in Hyannis Port on a sail boat eating pizza? From
Anson's description of panting-dog Hersh, delivering Exner to him
was a little like giving Geraldo copy of Goddess.

Mega-Trasher, or Just Mega-Trash?

Hersh's book promises to be the mega "trash Kennedy" book. And,
like any hatchet man, Hersh tries to disguise his mission. In the
Vanity Fair article, his fellow workers on the ABC documentary
say, "there have been moments when, while recounting private acts
of kindness by JFK, Hersh has broken down and wept." (Anson p.
122) This from a man who intimidated witnesses with his phony
papers and waved them aloft while damning the Kennedys with them.
I believe his tears as much as I do the seance that Ben Bradlee
and Jim Angleton attended to speak with the spirit of Mary Meyer
(see Part One). At the end, Hersh joins in the con job: "I would
have been absolutely devoted to Jack Kennedy if I had worked for
him. I would have been knocked out by him. I would have liked him
a lot." (Ibid) With what Anson shows of Hersh, I actually believe
him on this score. He would have loved his version of Kennedy.

Anson's article begs the next question: who is Hersh? As is
common knowledge, the story that made Hersh's career was his
series of articles on the massacre of civilians at the village of
My Lai in Vietnam. Hersh then wrote

The Hydrogen Bomb,
Nautilus 90 North, Silent Victory: the U.S. Submarine War Against Japan. In his book on Rickover, he got close cooperation from the Atomic Energy Commission and the book was screened by the Navy Department. In 1969 he wrote a book on the Martin Luther King murder called The Strange Case of James Earl Ray. Above the title, the book's cover asks the question "Conspiracy? Yes or No!" Below this, this the book's subtitle gives the answer, describing Ray as "The Man who Murdered Martin Luther King." To be sure there is no ambiguity, on page 146 Blair has Ray shooting King just as the FBI says he did, no surprise since Blair acknowledges help from the Bureau and various other law enforcement agencies in his acknowledgements.

The Ray book is basically an exercise in guilt through character assassination. This practice has been perfected in the Kennedy assassination field through Oswald biographers like Edward Epstein and Priscilla Johnson McMillan. Consider some of Blair's chapter headings: "A Heritage of Violence," "Too Many Strikes Against Him," "The Status Seeker." In fact, Blair actually compares Ray with Oswald (pp. 88-89). In this passage, the author reveals that he also believes that Oswald is the lone assassin of Kennedy. He then tries to imply that Ray had the same motive as his predecessor: a perverse desire for status and recognition.

Later, Blair is as categorical about the JFK case as he is about the King case:
In the case of Joh

and nothing more can happen to me,
I want to be completely honest. I don't think I should have
to die with the secret of what I did for Jack Kennedy, or
what he did with the power of his presidency. I feel that I
am finally free of the past.

Exner's 1997 Version

I hope Exner sued her doctor, because ten years later she's still
with us. She now turns up in the pages of the January 1997 Vanity
Fair which, unembarrassed, again bills her as "facing her death."

This time she was teamed with another questionable expert on
Kennedy's Cuba policy - Hollywood gossip columnist Liz Smith. And
evidently, the previous fear of death wasn't enough to squeeze
the whole story out of her. She still has a few goodies to add.

The choice of Smith in 1997 is as revealing as Demaris in 1977
and Kelley in 1988. Smith writes for the New York Post, which is
literally a tabloid in both format and approach. Like Kelley,
Smith is a big fan of Sy Hersh. In fact, her column has released
several "teaser" items about his upcoming book. In the past she
has also flacked for Tony Summers. What do those two writers have
that other Kennedy researchers, say John Newman, do not? They
have both pushed the angle that the Kennedys were somehow
involved with the death of Marilyn Monroe. Smith dutifully
mentions both authors in her Vanity Fair piece and writes, as
fact, that RFK was at Marilyn's the day she died. Exner herself
claims that Summers has offered to supply a new "foreword should
she write another book" and Smith sent Exner to see Hersh who,
predictably, also endorses her story.

In the article, Smith seems conscious of her questionable
qualifications to address the serious subjects of Kennedy and
Cuba and the Church Committee. Throughout, she sprinkles in
little aphorisms to neutralize any attacks. She quotes Oscar
Wilde (not famous for his history books) when

Then on 26 August
2003 President Bush Jr. told the American Legion Convention that he was fully prepared to launch more "pre-emptive" attacks against his chosen enemies around the world.44 So Bush Jr. clearly sketched out on the horizon the prospect of more acts of aggression at the very opening of his 2004 presidential election campaign. Will Bush Jr. further exploit aggression and warfare in order to win his very first U.S. presidential election? Or will he steal the U.S. Presidency from the American People as he did in 2000? Or perhaps some combination of both strategies? His Rasputin Karl Rove will know for sure. Belligerent Occupation

When the Bush Jr. administration's aggression against Iraq was over, the United States and the United Kingdom became the "belligerent occupants" of Iraq in accordance with, and subject to the requirements of, the laws of war. Succinctly put, these can be found in the Fourth Geneva Convention of 1949, its Additional Protocol One of 1977, the Hague Regulations of 1907, and U.S. Army Field Manual 27-10 (1956). Nevertheless, soon thereafter the Bush Jr. administration made it crystal clear that they were going to remake Iraq in their own image and thus not pay the least bit of attention to the laws of war: e.g., "privatization" of the Iraqi economy, including and especially its oil industry; drafting a new constitution for Iraq; re-writing Iraq's laws; establishing ad hoc war crimes tribunals along the lines of their kangaroo courts in Guantanamo; de-Baathification; indoctrinating Iraqi schoolchildren with American propaganda; etc. Putting the future of Iraq up for sale to the lowest American (and then British and Israeli) bidders. Even

beach answering that kind of question with
Bobby staring a hole through you.

By 1963, after the Bay of Pigs, the Missile Crisis and the cries for escalation in Vietnam, Kennedy was moving toward the Sorenson-Schlesinger side of the White House. By 1968, RFK was further to the left than that, being hooked up with labor leaders like Walter Reuther and Cesar Chavez. As Otis Chandler, a firm member of the establishment, said after Bobby's death: "I guess there's no one to stand up for the weak and the poor now." That memory is now being replaced by those of RFK cavorting with Monroe on the beach; of JFK drinking martinis with Monroe's buddy Giancana; and the Kennedys trying to take her life as they tried with Castro.

In the Anson piece, Hersh talks about changing the way people think about the Kennedys. Talk about reversing the Church Committee. That was just the beginning. These people could teach Orwell something.

What will the future bring? Will Exner, still dying of cancer, demand a DNA sample from John Kennedy Jr. to prove Jackie was really his mother? Will Summers file a lawsuit demanding the government turn over RFK's private snuff film of Monroe's murder? Will Hersh now say that he was duped on the Monroe docs but now he has the real McCoy: it was Jayne Mansfield all along. With Liz Smith as the moderator, satire is impossible in this field.

But down deep, submerged but still present, there is a resistance to all this. The public knows something is wrong. Two years ago, CBS and the New York Times conducted a poll which asked the respondents: If you could pick a President, any President, which one would you choose to run the country today? The winner, in a landslide, was John F. Kennedy who doubled the tally of the second place finisher. In 1988, Rolling Stone surveyed the television generation, i.e. the below forty group, on their diverse opinions and attitudes.

Fundies, Feddies, and Con-Artists It is now a matter of public record that immediately after the terrible tragedy of 11 September 2001, U.S. Secretary of War Donald Rumsfeld and his pro-Israeli "Neoconservative" Deputy Paul Wolfowitz began to plot, plan, scheme and conspire to wage a war of aggression against Iraq by manipulating the tragic events of September 11th in order to provide a pretext for doing so.1 Of course Iraq had nothing at all to do with September 11th or supporting Al-Qaeda . But that made no difference to Rumsfeld, Wolfowitz, their Undersecretary of War Douglas Feith, Undersecretary of State John Bolton, and the numerous other pro-Israeli Neo-Cons inhabiting the Bush Jr. administration. These pro-Israeli Neo-Cons had been schooled in the Machiavellian/Nietzschean theories of Professor Leo Strauss who taught political philosophy at the University of Chicago in its Department of Political Science. The best expos&#65533; of Strauss's pernicious theories on law, politics, government, for elitism, and against democracy can be found in two scholarly books by the Canadian Professor of Political Philosophy Shadia B. Drury.2 I entered the University of Chicago in September of 1968 shortly after Strauss had retired. But I was trained in Chicago's Political Science Department by Strauss's foremost prot&#65533;g&#65533;, co-author, and later literary executor Joseph Cropsey. Based upon my personal experience as an alumnus of Chicago's Political Science Department (A.B., 1971, in Political Science), I

Back OT, I always liked the look of the Allen Bradly carbon comps, really lit up the underside of an audio amp. The only drawback, other than resistance shift, I remember hearing that they were quite noisy as plate resistors. Maybe so, but there is a heap of carbon comps out there!

And that comment to Jim Menning was uncalled for. Jim will forget more accidently than you will _ever_ know.
Tom

Nations Emergency Force (UNEF) to the Sinai in order to facilitate the withdrawal of aggressor military forces by the United Kingdom, France and Israel that had illegally attacked and invaded Egypt in their joint and severable Nuremberg Crime against Peace for the purpose of inflicting "regime change" against Egyptian President Nasser.62

The Bush Jr. pro-consul in Iraq Paul Bremer and his Iraqi puppet council under the pro-Israeli Chicago Straussian Neo-Con CIA asset Chalabi should be replaced by a U.N. Transitional Authority reporting directly to the U.N. Trusteeship Council (not the U.S. co-opted U.N. Security Council) in accordance with Chapter XIII of the U.N. Charter. The Iraqi People can then proceed to exercise their international legal right to self-determination for themselves in order to decide their own political, economic, constitutional and legal future as they see fit - not one pre-selected for them by the pro-Israeli Straussian Neo-Cons and the Big-Oil operatives of the Bush Jr. administration who were responsible for fomenting this criminal war of aggression against Iraq in the first place. America for the Americans Otherwise, U.S., U.K. and foreign military occupation forces will be facing another type of Vietnam War situation. Iraq could readily become a combination of Tonkin Gulf, L.B.J., Vietnam, Nixon, Cambodia, Watergate, and Impeachment63 all over again, rolled into one, and acce

and recycle another thrashing.
Mobsters and those in their employ, CIA officers and their assets, rabid right-wingers et. al. Escorted by these writers, they now do their dances over the graves of the two men they hated most in life and can now revile in death. There is something Orwellian about this of course.

The converse of this thesis is also true. The voices the Kennedys symbolized are now squelched. Collier and Horowitz are intent on never letting the ghost of the sixties reappear. The poor, the weak, minorities, and the left's intelligentsia must not be unsheathed again. (As Todd Gitlin notes in his book The Sixties, on occasion, the Kennedy administration actually had SDS members in the White House to discuss foreign policy issues.) The image of JFK on national television giving hell to the steel companies; of Kennedy staking out his policy for detente at American University; of RFK grilling Sam Giancana and Jimmy Hoffa; of Bobby going through the personnel list at the State Department to be sure there was no Dulles still on the payroll; these images have to be erased. Most of all, the RFK of 1965-68 witgry at the perversion of his brother's policies, must be subverted. Who of the elite would want people to remember RFK saying these words:
What the Alliance for Progress has come down to then is that [the native rulers] can close down newspapers, abolish Congress, fail religious opposition, and deport your political enemies, and you'll get lots of help, but if you fool around with a U.S. oil company, we'll cut you off without a penny. Is that right?

It was no day at the beach answering that kind of question with Bobby staring a hole through you.

By 1963, after the Bay of Pigs, the Missile Crisis and the cries for escalation in Vietnam, Kennedy was moving toward the Sorenson-Sc

war criminal.9 According to his
own public estimate and boast before the American Enterprise Institute, President Bush Jr. hired about 20 Straussians to occupy key positions in his administration, intentionally taking offices where they could push American foreign policy in favor of Israel and against its chosen enemies such as Iraq, Iran, Syria, and the Palestinians.10 Most of the Straussian Neo-Cons in the Bush Jr. administration and elsewhere are Israel-firsters: What is "good" for Israel is by definition "good" for the United States. Dual loyalties indeed.11

In addition, it was the Chicago Straussian cabal of pro-Israeli Neo-Cons who set up a special "intelligence" unit within the Pentagon that was responsible for manufacturing many of the bald-faced lies, deceptions, half-truths, and sheer propaganda that the Bush Jr. administration then disseminated to the lap-dog U.S. news media12 in order to generate public support for a war of aggression against Iraq for the benefit of Israel and in order to steal Iraq's oil.13 To paraphrase advice Machiavelli once rendered to his Prince in Chapter XVIII of that book: Those who want to deceive will always find those willing to be deceived.14 As I can attest from my personal experience as an alumnus of the University of Chicago Department of Political Science, the Bible of Chicago's Neo-Con Straussian cabal is Machiav

is apparently off limits for Ron. If
he drew attention to his lack of curiosity on this matter, it
would hint that something is being papered over in order to
conceal a point.

If that were so, then a previous occurrence in Jim Truitt's
career would bear mentioning, since it quite closely resembles
what he did later in 1976. In August of 1961, Truitt had called
Bradlee and said he had evidence that Kennedy had been previously
married before his wedding to Jackie, and that this fact had been
covered up. Both Bradlee and Truitt pursued the story. But before
they printed it they asked Kennedy about it. He referred them to
Pierre Salinger, his press secretary. Salinger had already heard
the charge from rightwing commentator Fulton Lewis. He had all
his points lined up and proved the story false. Bradlee's account
in Conversations With Kennedy (pp. 43-49) seems to suggest that
Truitt and Bradlee still worked on the story after they were
shown it was wrong.

Also intriguing is a flourish added in Rosenbaum's version, which
appears heavily reliant on the Truitts and Angletons as sources.
Rosenbaum writes that Mary's diary, although usually laid upon
her bedroom bookcase, was found in a locked steel box in her
studio. Rosenbaum doesn't probe as to why it was not found in its
usary&resting place. The locked steel box is not a part of any
other version of the story I know, including Tony Bradlee's, and,
in all versions, she supposedly found the diary. Of course, a
locked box suggests intrigue, but it strains reality. Are we to
believe that every time Mary wanted to make

going to make me look like a hypocrite. Also, it will compromise my case against this guy in court when he shows the judge that photo of us three sitting here." Finally, Kelley has no questions about a glaring inconsistency in her scenario. In the course of these ongoing meetings, probably at the first one, wouldn't nice guy Sam say, "Jack I really appreciate the dinner, but this is all kind of redundant. See, I'm already working with Bob Maheu at CIA to kill Fidel." Evidently, Exner was so convincing that neither Kelley nor her editors ever entertained any doubts. Or to hopeless cynics like myself, maybe they didn't want to blow the hundred grand they had invested in their cover story.

Kelley did ask one pertinent question. Namely, why did Exner not tell Demaris these startling details back in 1977? Why did she wait eleven years to bare her soul? Exner says she was afraid and needed to protect herself. Unfortunately, this rings a bit hollow since 1) Giancana and Roselli were both dead when she wrote her book, 2) the Church Committee spilled all the beans on

have been so
naive for so long. And it is ironic that ABC should use 20/20 to
expose a phenomenon that it itself fueled twelve years ago.

What happened on September 25th was the most tangible
manifestation of three distinct yet overlapping journalistic
threads that have been furrowing into our culture since the
Church Committee disbanded in 1976. Hersh's book would have been
the apotheosis of all three threads converged into one book. In
the strictest sense, the convergent movements did not actually
begin after Frank Church's investigation ended. But it was at
that point that what had been a right-wing, eccentric, easily
dismissed undercurrent, picked up a second wind-so much so that
today it is not an eccentric undercurrent at all. It is accepted
by a large amount of people. And, most surprisingly, some of its
purveyors are even accepted within the confines of the research
community.

The three threads are these:
1. That the Kennedys ordered Castro's assassination, despite
the verdict of the Church Committee on the CIA's assassination
plots. As I noted last issue, the committee report could find no
evidence indicating that JFK and RFK authorized the plots on
Fidel Castro, Rafael Trujillo of the Dominican Republic, or Ngo
Dinh Diem of South Vietnam.
2. That the Kennedys were really "bad boys," in some ways as
bad as Chicago mobsters or the "gentleman killers" of the CIA.

Although neither JFK nor RFK was lionized by the main centers of
the media while they were alive, because of their early murders,
many books and articles were written afterward that presented
them in a sympathetic light, usually as liberal icons. This was
tolerated by the media establishment as sentimental sop until the
revelations of both Watergate and the Church Committee. This
"good guy" image then needed to be altered since both those
crises seemed to reveal that the Kennedys were actually di

On September 25, 1997, ABC used its news magazine program 20/20 to take an unusual journalistic step. In the first segment of the program, Peter Jennings took pains to discredit documents that had been about to be used by its own contracted reporter for an upcoming show scheduled for broadcast. The contracted reporter was Seymour Hersh. The documents purported to show a secret deal involving Marilyn Monroe, Sam Giancana, and President John F. Kennedy. They were to be the cornerstone of Hersh's upcoming Little, Brown book, The Dark Side of Camelot. In fact, published reports indicate that it was these documents that caused the publisher to increase Hersh's advance and provoke three networks to compete for a television special to hype the book. It is not surprising to any informed observer that the documents imploded. What is a bit surprising is that Hersh and ABC could have been so naive for so long. And it is ironic that ABC should use 20/20 to expose a

builds another scaffolding: he now postulates that Exner was Kennedy's conduit to the CIA-Mafia plots to kill Castro (Ibid p. 324). What is breathtaking about this is that this is something that not even Exner had uttered yet, at least not for dissemination. And she won't until her get-together with Kitty Kelley in the February 1988 cover story for People. This curious passage leads one to think that Davis may have planted the seed from which the Kelley story sprouted.

To go through the entire Davis book and correct all the errors of fact, logic, and commentary would literally take another book. But, in line with my original argument about anti-Kennedy biography, I must point out just two parts of Davis' discussion of JFK's Vietnam policy. The author devotes a small chapter to this subject. In his hands, Kennedy turns into a hawk on Vietnam.

Davis writes that on July 17, 1963, Kennedy made "his last public utterance" on Vietnam, saying that the U.S. was going to stay there and win (p.374). But on September 2, 1963, in his interview with Walter Cronkite, Kennedy states that the war is the responsibility of "the people of Vietnam, against the Communists." In other words, they have to win the war, not Americans. Davis makes no mention of this. Davis similarly ignores NSAM 111 in which Kennedy refused to admit combat troops into the war, integral to any escalation plan, and NSAM 263, which ordered a withdrawal to be completed in 1965. This last was published in the New York Times (11/16/63), so Davis could have easily found it had he been looking.

In light of this selective presentation of the recor

lots of foundation money, the pair arranged a
"Second Thoughts" conference in Washington. This was basically a
meeting of "reformed" sixties liberals bent on attacking that
decade and anyone who wished to hold it up as an era of
excitement and/or progressive achievement. Peretz attended that
conference. Later, they sponsored another conference entitled
"Second Thoughts on Race in America." This might have been called
the Washington Post take on race in the eighties since it
featured such Kay Graham-Ben Bradlee employees as Richard Cohen,
Juan Williams, and Joe Klein. Today, these two see themselves as
armed guards protecting America from any renaissance of sixties
activism after Reagan. They are quite open about this and
Kennedy's role in it in Destructive Generation: "Just as
Eisenhower's holding action in the Fifties led to JFK's New
Frontier liberalism in the Sixties...so the clamped-down
Reaganism of the Eighties has precipitated the current radical
resurgence...." Is one to conclude that Clinton is a radical? Was
the Kennedy book a put-up job to place them over the top with
their right-wing sponsors? Or do they really find Kitty Kelley
credible? Could they really not have known that Priscilla Johnson
McMillan was doing the same thing with Kennedy that she had

this information, and
the inferences, to dismiss The Search for JFK. I could even add
that Blair's agent on his Kennedy book was Scott Meredith, who
was representing Judith Exner at the time. But I won't go that
far. I may be wrong, but in my opinion I don't think the book can
be classified as a deliberate distortion or hatchet job. Although
the authors are in some respects seeking to surface unflattering
material, I didn't feel that they were continually relying on
questionable sources or witnesses, or consistently distorting or
fabricating the record. As I have mentioned, the book can be
criticized and questioned-and dismissed-on other grounds, but, as
far as I can see, not on those two.

Dubious Davis

Such is not the case with John Davis' foray into Kennedy
biography. The Kennedys: Dynasty and Disaster 1848-1983, was
published in 1984, before Davis became the chief spokesman for
the anti-Garrison/Mob-did-it wing of the ramified assassination
research community. In its very title, his book is deceptive in a
couple of interesting ways. First, from the dates included, it
implies that the book will be a multigenerational family saga
tracing the clan from Joe Kennedy's parents down to youngest
brother Teddy. But of the book's 648 pages of text, about 400
deal with the life and death of John F. Kennedy. And more than
half of those deal with his presidency. In no way is the book an
in-depth family profile. Secondly, as any school boy knows, the
word dynasty denotes a series or succession of at least three or
more rulers. So Jack Kennedy's two years and ten months as
president constitute the shortest "dynasty" in recorded history.
In reality, of course, it was not a dynasty at all and the
inclusion of the word is a total misnomer.

But there is a method to the misnoming. For Davis, it is
necessary to suggest a kind of "royal family" ambience to the
Kennedys and, with it, the accompanying aura of familial and
assumed

led him to the home of none other
than Richard Helms (Ibid, p. 289). Helms told Davis, "that he
believed Bissell was correct, that, knowing him, he would not
commit perjury before a Senate committee." (Ibid). Davis leaves
out the fact that perjury is precisely what Helms committed
before a Senate committee in 1973 about CIA involvement in Chile.

He also fails to tell the reader anything about the Helms-Bissell
relationship, which makes his "vouching" for Bissell almost
humorous. When the two were in the CIA, there were few rivalries
more pronounced and few resentments more public than the one
between Bissell and Helms, who resented his boss because Bissell
kept him out of the loop on some operations. Helms, according to
Evan Thomas' The Very Best Men, was happy to see the Bay of Pigs
capsize because it meant Bissell would be out and that Helms
would move up (p. 268). So, to most objective readers, if Helms
has now switched to endorsing Bissell, there must be some
extenuating circumstances involved. There are, and again, Davis
does not tell the reader about them. As the Inspector General's
report tells us, when Dulles and Bissell began cleaning out their
desks, a new team took over the Castro plots, namely Bill Harvey
and Ted Shackl

If there are any old sewer-pipe Radiomen (capitol "R") among you (if you have to ask, then you ain't one), here's something I had to share with you. Tribute to an old shipmate by Bob 'Dex' Armstrong

- -

Vic Casciola, Radioman, Shipmate.

Late one evening, before our last reunion, I got a phone call. When I heard the voice, years melted away.

"Dex... Vic Casciola... You remember me?"

Did I remember Vic? Does a hobby horse have a hickory dick? You bet I remember Vic!!

Vic had a medical condition that erased a lot of his memory and was phoning to see if I thought the lads would recall who he was. He didn't want to show up at the reunion if nobody would remember him. He also wanted his son to know that long ago, his dad rode the boats.

So, this is for his son. It's not much... Others could do better. I'm not articulate enough to capture on paper the unique, one-of-a-kind shipmate that was Vic. All I want to do is validate Vic's credentials.

Vic arrived on Requin wearing paratrooper wings over his ribbons. Paratrooper wings and Silver Dolphins... Talk about double-dipping lunatics.

Vic was a radioman... Make that triple-dipping lunacy. He was the absolute master of the "speed key." A contraption radio guys used to tap out flips and blips that to fellow practitioners of flip and blip transmission, could be translated into communication understood by normal members of the human race. Vic could pound out stuff at a rate that constantly frustrated his recipients. Many nights, radiomen receiving Vic's "heat" would have to tell him to hold up until they could hunt up some poor devil who could read at his rate... Like going to find a catcher for Nolan Ryan's fast ball. Vic could bang out code faster than Gypsy Rose could pop a garter snap.

He was amazing. He was also a master at sneaking stuff into official traffic. In the old days, boat sailors didn't get fifty word 'poopy-grams'... We got 'Little Orphan Annie drops' and anything you could con a radioman to sneak into a message after he caught up on ALLNAV transmissions.

A 'Little Orphan Annie drop' came from naval aviators. The good ones, God bless 'em, would go to the tender, collect your mail, put it into a cleaned up paint can along with a couple of recent newspapers, a dog-eared Playboy, and two or three sports magazines. They would tape the contraption up and drop it to you

when you were surfaced.

They would fly over and yell stuff over the radio,

"Mark center... Mark ringer..."

And out of the bottom of a P2V would come a tumbling can. Lookouts would cheer and the can would slam into the swells.

If you were lucky, someone on deck would fish out the can with a boathook, mail would be distributed in the control room and we would spike the morale-meter.

If you were unlucky, the sunovabitch would sink... And set up housekeeping with crabs and a lot of German U-Boat crews. One Christmas, we lost a can on a three contraption drop. I later learned that a port wine soaked, pecan loaded fruitcake my aunt sent me, had been misdirected to the deck force of the Titanic.

That brings us back to method two of clandestine shore communication... Vic Casciola and his magical speed key. The poor bastards in the Orion radio shack would get stuff like this...

"REQUIN ETA 1600Z... REQUIRE WELDER FOR DECK DAMAGE ON STAND BY... PHONE 319-6247 FOR RESULTS OF LITTLE LEAGUE SERIES... REQUIN TO DEPART NORFOLK 0800Z 031561... WILL REQUIRE STORES, TWO WEEKS... FUEL... CHARTS ACCORDING TO OP ORDERS... PHONE 319-4670 TELL MARY DAD WILL FUND PROM DRESS... WILL LOAD 2 MK37 TORPEDOES... HAVE INJURED MAN TO TRANSFER NORFOLK NAVAL HOSPITAL REQUIRE TRANSPORT... PATIENT AMBULATORY... PHONE 319-4026 OBTAIN RESULTS PREGNANCY TEST... WILL NEED NEST ASSIGNMENT AND LINE HANDLERS... (pause)... WILL EXPECT ANSWERS NEXT TRANSMISSION"

Magic Man could get everything from clothing measurements to racing results and the wardroom never knew.

Vic could fall asleep in the middle of a bar brawl. We didn't know that it was probably an early indication of his later medical problem.

Once, the diving officer was told that Vic was asleep on watch in the radio shack. Major no-no. When the diving officer went to the shack, there was Cassiola wearing headphones with his eyes closed.

"Casciola... You asleep?"

"No sir."

Never opened his eyes.

"Well, what in the hell are you doing with your eyes closed?"

"Checking my eyelids for holes."

The worst duty on Requin was having the below deck watch and having to wake Vic up. The sonuvabitch could sleep through the last five minutes of a hocky game, a five hundred pound bomb drop and the second coming of Christ. The COB once said if Vic had been at Pearl Harbor on December 7, 1941, he would have slept through

it. I would rather have taken raw meat from a half-starved Bengal tiger than have been sent to separate Vic from his rack. It ranked up there with the most delicate surgical procedures... You had to remove the flashcover from Vic's back without getting your lights punched out. We toyed with the idea of doing it electrically, but how could you wire up a guy who could have the tender phone your mom to wish her a happy birthday?

Vic Casciola... Did we remember you?

Hell no.

Everyone wore Dolphins, paratrooper wings, sent code at the speed of light and slept like a bank vault.

Gary Wills a book titled Jack
Ruby. The book is, to say the least, a rather shallow portrait of Ruby based on a string of conversations with people the nightclub owner worked with. The profile that emerges is in total concordance with the Warren Commission view of Ruby as a dim, emotional, hustler who killed Oswald because he admired Jack and Jackie so much and wished to spare the widow the ordeal of a trial. Other events are also in line with the Warren Report: the shooting is from the sixth floor, Oswald killed Tippit, Ruby went straight down the Commerce street ramp on November 24th to kill Oswald.

The authors' honesty and acuity are quite suspect in that one of their chief sources is Dallas Deputy DA Bill Alexander, notorious for his close relationship with FBI-CIA journalist and cover-up artist Hugh Aynesworth. Striking also is the fact that they described one of the doctors treating Ruby as "having performed LSD experiments on an elephant" and left it at that. If they would have dug a little deeper, they would have found out that the man was longtime CIA doctor Louis J. West, who also treated Aldous Huxley. It was West's diagnosis that Ruby was a "can

"Nixon's Last Cover
Up." In spite of this, at times Hersh actually did favors for the White House. As Ron Rosenbaum describes in Travels with Dr. Death, Hersh circulated some dirt on Dan Ellsberg (p. 294).

Anson mentions a famous anecdote about Hersh's reporting on Watergate (p. 107). Hersh got wind of a man involved in the Watergate caper by the name of Frank Sturgis. Sturgis was getting ready to talk during the early stages of the unfolding Watergate drama. Sturgis was working with Andrew St. George, a good, relatively independent journalist. The pair were going to write a book about Sturgis' experience in Watergate, but Hersh threatened to expose them first if they did not cooperate with him. In return, Hersh promised not to name St. George and to run the completed article by them first. St. George kept his side of the deal. Hersh broke his. St. George was named in the piece twenty-three times.

But there is another aspect to this story not mentioned by Anson. When St. George did publish a piece on Watergate in Harper's, it was based on his talks with another Watergate burglar, Eugenio Martinez. It gave strong indications of the CIA's role in Watergate, and that Howard Hunt was a double agent inside the Nixon camp. A few years later, in High Times (April 1977) sans Hersh, Sturgis now spoke. He depicted Watergate as a war not with Sam Ervin and the Post on one side and Nixon on the other; but as the CIA versus Nixon. None of this was in Hersh's piece, which presented the typical White Hous

Edwin Walker in April of 1963, thus
allowing that crazed Communist Oswald to escape and later kill
JFK. This piece of rant has been modified later to fit into the
stilted mosaics of people like Davis and Waldron. What makes it
so fascinating is that, through the FBI's own files, we now have
evidence that Capell was deliberately creating a fiction: he had
information that Oswald was not a communist, but a CIA agent.

The second point worth examining about Capell's screed is the
part where he begins laying out the "conspiracy" to kill Marilyn,
specifically, RFK's motive for murder. Capell writes:
But what if she were helped along into the next world by
someone who would either benefit financially or who feared
she might disclose something he wished to conceal. Suppose,
for example, a married man were involved, that he had
promised to marry her but was not sincere. Suppose she had
threatened to expose their relationship (p. 28)

This is as specific as Capell gets in outlining his reason for
the "conspiracy." I wondered where he got the idea of Monroe's
"going public" about an affair. As many writers have pointed out,
this would have been quite out of character for her. Something
that Jim Marrs recently sent me may help explain it. He sent me
the full text of a memo that he references in his current book,
Alien Agenda. The memo supposedly reports on information gleaned
from an FBI wiretap of Dorothy Kilgallen's phone. The document
went from the FBI to the CIA, where it was signed by James
Angleton. In it, a man named Howard Rothberg is quoted as saying
that Monroe had conversations with the Kennedy brothers on top
secret matters like the examination of captured outer space
creatures, bases inside of Cuba, and of President Ken

Just as Newman corrected the Vietnam record
in 1992, his long-awaited book Kennedy and Cuba will do much to
correct these dubious assertions.

"Liberal" Turncoats:
Collier and Horowitz

The same year that the Davis book appeared, another anti-Kennedy book was published. It was entitled The Kennedys: An American Drama, and was written by Peter Collier and David Horowitz. These two were both former editors at the liberal Ramparts publication.

After the magazine folded, both began to write biographies of famous American families while on their way from the left to the extreme right. In order, the pair examined the Rockefellers, the Kennedys, the Fords, and the Roosevelts. As with Davis, it is interesting to note the difference in their treatments of the Rockefellers (1976) and the Kennedys (1984). In the earlier book, the authors note toward the end that they had access to the Rockefeller family archives (p. 636). In another book of theirs, Destructive Generation, they write that the Rockefeller book began when the pair were soliciting funds to keep Ramparts afloat (p. 275). This is how they got in contact with the younger generation of that clan. So when the magazine fell, they went to work on the f

Demaris' book on Hoover can only be called sympathetic. This is immediately indicated by his choice of interviewees. They include high level FBI administrators like Robert E. Wick, John P. Mohr, and Mark Felt; former Attorney General Richard Kleindienst; Hoover publicity flack Louis Nichols who named one of his sons after his boss; and actor Efrem Zimbalist who starred in ABC's glamorized series on the Bureau. In the entire book, there are eight pages on Hoover's infamous COINTELPRO operations, i.e. the infiltration, disruption, and occasional destruction of domestic political movements.

In Hoover's disputes with the Kennedys, there can be no doubt where Demaris stands. Speaking of Hoover's reputed blackmailing of presidents, he writes: "It is possible that one or two were intimidated by their own guilty conscience...." He sums up Hoover by saying, "He was, whatever his failings, an extraordinary man, truly one of a kind." The above gives us a hint of why Demaris hooked up wi

Spoto reveals in his book Marilyn Monroe, one of the people who relentlessly pushed Capell's fabricated smear was fellow FBI asset, Hoover crony, and Hollywood Red baiter Walter Winchell (Spoto p. 601). (For a full discussion of former ONI operative Winchell's service in Hoover's employ see Neal Gabler's Winchell.) As William Sullivan has noted, the dissemination of Capell's invention was encouraged by Hoover. Sullivan called Bobby a near-Puritan and then added:
The stories about Bobby Kennedy and Marilyn Monroe were just stories. The original story was invented by a so-called journalist, a right-wing zealot who had a history of spinning wild yarns. It spread like wildfire, of course, and J. Edgar Hoover was right there, gleefully fanning the flames. (The Bureau p. 56)

The Capell/Winchell/Hoover triangle sowed the seeds of this slander. But the exposure of this triangle does more. In the Vanity Fair article in which Judith Exner dumped out the latest installment of her continuing saga, Liz Smith revealed that she apprenticed at the feet of Walter Winchell in New York (January 1997 p. 32). This may explain why she took up her mentor's

was
published in the New York Times (11/16/63), so Davis could have
easily found it had he been looking.

In light of this selective presentation of the record on Vietnam,
plus the acrobatic contortions performed on the Church Committee
report, one has to wonder about Davis' intent in doing the book.

I question his assertion that when he began the book he "did not
have a clear idea where it would lead." (p. 694) So I was not
surprised that in addition to expanding Exner's story, he
uncritically accepted the allegations about Mary Meyer and
Marilyn Monroe (pp. 610-612). As the reader can see, in the three
areas outlined at the beginning of this essay, Davis hit a
triple. In all the threads, he has either held steady or advanced
the frontier. It is interesting in this regard to note that Davis
devotes many pages to JFK's assassination (pp. 436-498). He
writes that Kennedy died at the "hands of Lee Harvey Oswald and
possible co-conspirators" (p. 436). Later, he will write that
Sirhan killed Bobby Kennedy (p. 552). Goin

Slatzer asks his "ex-wife" what that meant, Marilyn replies on cue: "I didn't quite understand what Bobby was saying. But I remember him telling me that he was powerful enough to have people taken care of it they got in his way." Another entry is about the Bay of Pigs. Slatzer says that Marilyn told him that Jack let Bobby handle "the whole thing" because JFK's back was sore that day etc. etc. etc. The whole book is a continuation and refinement of the Capell hoax.

But Slatzer got away with it. Today he still appears on talk shows and videos (e.g. Marilyn, the Last Word) as Marilyn's former spouse. In 1991, he actually sold his story to the ever gullible ABC. They made a film of his tall tale: Marilyn and Me.

Slatzer's book set a precedent in this field. Later, volumes by the likes of Milo Speriglio (whom Slatzer hired as an investigator), Anthony Scaduto, and James Haspiel, took their lead from Slatzer. They all follow the above outlined formula: the Kennedys were a rotten crowd (Collier and Horowitz); they were involved in political assassinat

in the article that does not come off
tongue-in-cheek.

After talking to Smith's pal Hersh, Exner calls Smith back. She states that the Kennedy-Giancana talks could be released under the JFK Act. She then adds: "I hope they will. The government wants me to talk again." [Emphasis added]
No surprise, Smith didn't ask Exner what she meant by that last comment, which sent the following flurry of questions bursting through my brain: Who in the government wants her to talk? Since she had just talked to Hersh, was it him who relayed this to her? And what on earth does that stunning adverb "again" signify? Does this mean the government pushed her in 1977? In 1988? On both occasions?
In retrospect, the recurring intervals of Exner's appearances are suggestive. Although the Post surfaced her in 1975, her book did not come out until two years later, on the fifteenth anniversary of Kennedy's assassination. The 1988 People version - boosted by two Times stories previewing its release - seems done to get the jump on other stories for the 25th anniversary (as we shall see, Ron Rosenbaum filled this role for the 20th anniversary). The latest edition, with Exner aware of the JFK Act, was done at the beginning of what was originally to be the last year of the Review Board. Smith wrote the piece before the extra year was granted by Congress. Smith's friendliness with Hersh, seems to further this. For according to the ARRB's original timetable, the Vanity Fair piece would arrive at the beginning of its last year and Hersh's attack book in October, right when the Review Boar

attempt to establish contact
with Mary's departed spirit. Can anyone imagine Angleton or
Bradlee sitting through a seance? (I could imagine Angleton
arranging a fake one.)
That Rosenbaum can unabashedly write such a thing tells us a good
deal about him (for more on Rosenbaum see the sidebar at left).

The fact that he never notes any of the discrepancies in the
story that he himself presents, tells us even more. For example,
he relates that Tony Bradlee found the diary. Yet in the article,
in the presented notes of an interview with her, she seems to
refer to more than one person being with her at that time. Also,
in those notes, Tony states that they were all honor bound not to
look at the diary. Yet Rosenbaum says that Angleton read,
indexed, and took notes on everything she found.

As is his bent, Rosenbaum seems intent on not probing key parts
of the story. The man who thinks Oswald shot at Kennedy (and
believes John Davis' Mafia Kingfish is as close as we will get to
a conspiracy alternative to Oswald), does not ask the question as
to why the Truitts seem to be siding with Angleton. That is,
unlike Bradlee's version, there are no hints of Angleton breaking
into places unexpectedly. Also indicative of this is that
Angleton, a source for Rosenbaum in 1976, said the diary was to
be entrusted to the Truitts. Yet Anne Truitt signe

all
his points lined up and proved the story false. Bradlee's account in Conversations With Kennedy (pp. 43-49) seems to suggest that Truitt and Bradlee still worked on the story after they were shown it was wrong.

Also intriguing is a flourish added in Rosenbaum's version, which appears heavily reliant on the Truitts and Angletons as sources. Rosenbaum writes that Mary's diary, although usually laid upon her bedroom bookcase, was found in a locked steel box in her studio. Rosenbaum doesn't probe as to why it was not found in its usary&resting place. The locked steel box is not a part of any other version of the story I know, including Tony Bradlee's, and, in all versions, she supposedly found the diary. Of course, a locked box suggests intrigue, but it strains reality. Are we to believe that every time Mary wanted to make an diary entry she would first fumble for her keys? Even in her own bedroom while she's living alone?

Of course, Rosenbaum makes nothing of the two most obvious paradoxes in the entire tale. Almost everyone agrees that, while the Meyers were married, she was knowledgeable about his CIA activities and that Cord Meyer was close to Angleton. Reportedly, the liberal Mary grew disenchanted with Cord, his cohorts, and the Agency shop talk. She wanted to become her own person, hence her interest in painting. She also admired Kennedy's policies. If the above is true, why would she entrust the secrets of her

its biblical
Gospel is Allan Bloom's The Closing of the American Mind (1987).15 Of course Bloom was another prot�g� of Strauss, as well as a mentor to Wolfowitz. In his Bloom-biographical novel Ravelstein (2000) Saul Bellow, formerly on the University of Chicago Faculty, outed his self-styled friend Bloom as a hedonist, pederast, and most promiscuous homosexual who died of AIDS. All this was common knowledge at the University of Chicago, where Bloom is still worshiped and his elitist screed against American higher-education still revered on a pedestal. In Ravelstein Wolfowitz appeared as Bloom's prot�g� Philip Gorman, leaking national security secrets to his mentor during the Bush Sr. war against Iraq. Strauss hovered around the novel as Bloom's mentor and guru Professor Davarr. Strauss/Davarr is really the �minence grise of Ravelstein. With friends like Bellow, Bloom did not need enemies. On the basis of Ravelstein alone, Wolfowitz warrants investigation by the F.B.I.

Just recently the University of Chicago officially celebrated its Bush Jr. Straussian Neo-Con cabal, highlighting Wolfowitz Ph.D. '72, Ahmad Chalabi, Ph.D. '69 (the CIA's Iraqi puppet), Abram Shulsky, A.M. '68, Ph.D. '72 (head of the Pentagon's special "intelligence" unit), Zalmay Khalilzad, Ph.D. '79 (Bush Jr's roving pro-consul for Afghanistan and then Iraq), as well as faculty members Bellow, X '39, and Bloom, A.B. '49, A.M. '53, Ph.D. '55, together with Strauss. According to the University of Chicago Magazine, Bloom's rant "helped popularize Straussian ideals of democracy."16 It is correct to assert that Bloom's book helped to popularize Straussian

He himself wrote five columns on
the subject. Time magazine did a feature on her. Newsweek, the
Post's sister publication did two. Exner - via the Times and Post
- became a media sensation.

Riding the wave, Exner now took advantage of the publicity and
decided to write a book. Big-time literary mogul Scott Meredith
was her agent. Meredith reportedly sold serialization rights to
the book, sight unseen, to the National Enquirer for $150,000.

The book outline was prepared by Meredith's office and was
approved by Exner's attorney. A co-author was arranged for.

The co-author turned out to be Ovid Demaris. This is significant.
Demaris is usually described as a veteran crime writer of such
books as Captive City and The Green Felt Jungle . This is true as
far as it goes, but it does not go far enough.

Demaris Enters the Scene

In his prologue, Demaris writes that he was in the midst of a
multi-city tour for his previous book when he heard about Exner's
story. The previous book was an oral biography of Hoover entitled
The Director. In the Hoover book, Demaris has some disparaging
remarks about the Church Committee: it was politically motivated,
inspired by "rehashes of old charges," and was "flogging a dead
horse." Demaris was also unhappy with the many books on Watergate
and the fall of Richard Nixon. He characterizes them with the
following: "While some of their tall tales may be true, they are
not unaware that truth that is stranger than fiction will sell
better in a market already jaded by exotic overexposure."

Demaris' book on Hoover can only be called sympathetic. This is
immediately indicated by his choice of interviewees. They include
high level FBI administrators like Robert E. Wick, John P. Mohr,
and Mark Felt; former Attorney General Richard Kleindienst;

the book.

I question his assertion that when he began the book he "did not have a clear idea where it would lead." (p. 694) So I was not surprised that in addition to expanding Exner's story, he uncritically accepted the allegations about Mary Meyer and Marilyn Monroe (pp. 610-612). As the reader can see, in the three areas outlined at the beginning of this essay, Davis hit a triple. In all the threads, he has either held steady or advanced the frontier. It is interesting in this regard to note that Davis devotes many pages to JFK's assassination (pp. 436-498). He writes that Kennedy died at the "hands of Lee Harvey Oswald and possible co-conspirators" (p. 436). Later, he will write that Sirhan killed Bobby Kennedy (p. 552). Going even further, he can state that:
It would be a misstatement, then, to assert that Deputy Attorney General Katzenbach and the members of the Warren Commission...consciously sought to cover up evidence pertaining to the assassination of John F. Kennedy. (P. 461)

As the declassified record now shows (Probe Vol. 4 #6 "Gerald Ford: Accessory after the Fact") this is just plain wrong. Davis then tries to insinuate any cover-up was brought on by either a backfiring of the Castro plots (Davis p. 454) or JFK's dalliance with Exner (p. 498). As wrongheaded and against the declassified record as this seems, this argument still has adherents, e. g.

Martin Waldron and Tom Hartman. They refine it into meaning that the Kennedys had some kind of secret plan to invade Cuba in the offing at the time of the assassination. This ignores the Church Committee report, which shows that by 1963, Kennedy had lost faith in aggression and was working toward accommodation with Castro. It also ignores the facts that JFK would not invade Cuba und

example of Soviet barbarity (shades of
Basulto's Brothers to the Rescue). They, and specifically Jeanne
Kirkpatrick, treated the downing as a great propaganda victory.
In his book, The Target Is Destroyed, Hersh ended up siding with
the administration.

Which brings us to the nineties. Everyone knows that the broad
release of Oliver Stone's JFK in 1992 put the Kennedy
assassination back into play. The pre-release attack against the
film was unprecedented in movie history. That's because it was
more than just a movie. It was a message, with powerful political
overtones that dug deeply into the public psyche: a grand
political conspiracy had killed the last progressive president.

That Vietnam would have never happened if Kennedy had lived. That
JFK was working for accommodation with Castro at the time of his
death. That the country has not really been the same since.
The preemptive strike was successful in slowing up the film's
momentum out of the starting block. But the movie did increase
the number of people who believe the case was a conspiracy

to become ruthless and unprincipled Machiavellians. That is precisely why so many neophyte Neo-Con students gravitated towards the University of Chicago or towards Chicago Alumni at other universities. Years later, the University of Chicago became the "brains" behind the Bush Jr. Empire and his Ashcroft Police State. Attorney General John Ashcroft received his law degree from the University of Chicago in 1967. Many of his lawyers at the Bush Jr. Department of Injustice are members of the right-wing, racist, bigoted, reactionary, and totalitarian Federalist Society (aka "Feddies"),4 which originated in part at the University of Chicago. Feddies wrote the USA Patriot Act (USAPA) I and the draft for USAPA II, which constitute the blueprint for establishing an American Police State.5 Meanwhile, the Department of Injustice's own F.B.I. is still covering up the U.S. governmental origins of the post 11 September 2001 anthrax attack on Washington D.C. that enabled Ashcroft and his Feddies to stampede the U.S. Congress into passing USAPA I into law.6

Integrally related to and overlapping with the Feddies are members of the University of Chicago "School" of Law-and-Kick-Them-in-the-Groin-Economics, which in turn was founded upon the Market Fundamentalism of Milton Friedman, now retired but long-time Professor of Economics at the University of Chicago. Friedman and his "Chicago Boys" have raped, robbed, looted, plundered, and pillaged economies and their respective peoples all over the developing world.7 This Chicago gang of academic con-artists and charlatans are proponents of the Nazi Doctrine of "useless eaters." Pursuant to Friedman's philosophy of Market Fundamentalism, the "privatization" of Iraq and its Oil Industry are already underway for the primary benefit of the U.S. energy companies (e.g., Halliburton, formerly under Vice President Dick Cheney)

what came after (Nixon). Thus began a series of anti-Kennedy biographies.

3. That Marilyn Monroe's death was somehow ordained by her "involvement" with the Kennedy "bad boys." Again, this was at first a rather peculiar cottage industry. But around the time of Watergate and the Church Committee it was given a lift, and going back to a 1964 paradigm, it combined elements of the first two movements into a Gothic (some would say grotesque) right-wing propaganda tract which is both humorous and depressing in its slanderous implications, and almost frightening in its political and cultural overtones. Egged on by advocates of Judith Exner (e.g. Liz Smith and Tony Summers), this political and cultural time bomb landed in Sy Hersh's and ABC's lap. When it blew up, all parties went into a damage control mode, pointing their fingers at each other. As we examine the sorry history of all three industries, we shall se

of the Soviet Union gave the U.S. Power Elite the
opportunity to put their Machiavellian scheme for world economic
hegemony into operation.26 In other words, the Bush Jr. wars of
aggression against Afghanistan and Iraq are part of a longstanding
American plan to control and dominate the oil and natural gas supplies
for Europe, Japan, and Asia, and thus the future of the world's economy.
What my teacher, mentor, and later friend, the late and great Professor
Hans Morgenthau once denominated as "unlimited imperialism"27 in his
classic work Politics Among Nations.

Of course, the Bush Sr. war against Iraq for oil in 1991 was the first
battle in this U.S. quest for world economic hegemony. To the same
effect were the Bush Sr. invasion of Somalia;28 the Clinton/Bush Jr.
military intervention into Colombia;29 Bush Jr.'s support for the
anti-Chavez coup in oil-rich Venezuela;30 the post-9/11 U.S. military
intervention into and occupation of Djibouti in order to control the
Suez Canal/Persian Gulf oil route to Europe, and also to obtain direct
military access to the oil and natural gas resources around the Horn of
Africa; the August 2003 U.S. military intervention into Liberia, once
again to grab direct military access to the oil and natural gas
resources located off and on the West Coast of Africa;31 etc. Whatever
the public rhetoric or justification might be, the fact o

relates an episode in his life when his car broke down in the Mexican countryside. He walked to a poor, Third World style hut which had no amenities except a phone. Before he left, he thanked the native Mexicans who lived there and took a look around the dilapidated, almost bare interior. The only decorations he saw were a plaster figurine of Che Guevara, and near it, a photo of John Kennedy.

It's that international Jungian consciousness, however bottled up, ambiguous, uncertain, that must be dislodged. In a sense, this near-maniacal effort, and all the money and effort involved in it, is a compliment that proves the opposite of the position being advanced. This kind of defamation effort is reserved only for the most dangerous foes of the status quo, e.g. a Huey Long or a Thomas Jefferson. In a weird sort of way, it almost makes one feel for the other side. It must be tough to be a security guard of the mind, trying to control any ghosts rising from the ashes. Which, of course, is why Hersh has to hide his real feelings about his subject. That's the kind of threat the Kennedys

cleansing them - "manifest destiny."47 The American
government started the 20th Century by stealing a colonial Empire from
Spain and then conducting a near genocidal war against the Philippino
People - "a place in the sun." The U.S. government opened the 21st
Century by trying to steal a hydrocarbon empire from the Muslim States
and Peoples of Eurasia - "a war against international terrorism." But
this latest transgression could very well prove to be the definitive
step of "imperial overstretch" that will break the back of the American
Empire both abroad and at home.48 In 1991 the mighty Soviet Empire
collapsed like a house of cards after a decade of "imperial overstretch"
in Afghanistan. Like the former Soviet Union, the United States of
America itself is an imperial house of cards built upon the backs of
Indigenous Peoples and Peoples of Color.49 The Bush Jr. administration's
aggressions against and occupations of Afghanistan and Iraq could very
well generate a reverse domino effect: ". . . they all fall down." The
United States of America is not immune to the laws of history.
Prostitution of and by the United Nations

To the same effect was Security Council Resolution 1500 of 14 August
2003, which "Welcomes the establishment of the" U.S. puppet-council in
Iraq under Chicago's pro-Israeli Straussian Neo-Con CIA asset Chalabi,

and
the Kennedys trying to take her life as they tried with Castro.

In the Anson piece, Hersh talks about changing the way people think about the Kennedys. Talk about reversing the Church Committee. That was just the beginning. These people could teach Orwell something.

What will the future bring? Will Exner, still dying of cancer, demand a DNA sample from John Kennedy Jr. to prove Jackie was really his mother? Will Summers file a lawsuit demanding the government turn over RFK's private snuff film of Monroe's murder? Will Hersh now say that he was duped on the Monroe docs but now he has the real McCoy: it was Jayne Mansfield all along. With Liz Smith as the moderator, satire is impossible in this field.

But down deep, submerged but still present, there is a resistance to all this. The public knows something is wrong. Two years ago, CBS and the New York Times conducted a poll which asked the respondents: If you could pick a President, any President, which one would you choose to run the country today? The winner, in a landslide, was John F. Kennedy who doubled the tally of the second place finisher. In 1988, Rolling Stone surveyed the television generation, i.e. the below forty group, on their diverse opinions and attitudes. Their two most admired public leaders were Bobby Kennedy and Martin Luther King, dead twenty years before, when many of those polled were infants or not even born. This holds not just in America. In Pete Hammill's 1995 book Piece Work, he relates an episode in his life when his car broke down in the Mexican countryside. He walked to a poor, Third World style hut which had no amenities except a phone. Befo

he
made his living with a typewriter. Yet, in all the hours he spent looking at these papers, this anachronism never jumped out at him?

That Hersh could be such an easy mark, that he was so eager to buy into the Summers-Haspiel-Slatzer concoction tells us a lot about what to expect from his book. As Anson notes, Hersh has been talking not only to CIA officials, but also to Secret Service people and, especially to Judith Exner. The reasons for the CIA to lie about the Castro plots have already been explained. At the beginning of part one of this piece, I mentioned that many in the Secret Service hated Kennedy, realized they were culpable in a security breakdown, and, like Elmer Moore, worked hard to cover up the true circumstances of Kennedy's murder. About Exner's motives, I can only speculate.

Will Hersh have her now say that she saw Marilyn with Kennedy and Giancana in Hyannis Port on a sail boat eating pizza? From Anson's description of panting-dog Hersh, delivering Exner to him was a little like giving Geraldo copy of Goddess.

given up by the CIA was on
the Castro assassination plots. Further, the Agency decided to
give up many documents on both the employment of the Mafia to
kill Fidel, and the AM/LASH plots, that is, the enlistment of a
Cuban national close to Castro to try and kill him. Again, not
enough credit has been given to the wisdom of these choices. In
intelligence parlance, there is a familiar phrase: muddying the
waters. This means that by confusing and confounding the listener
with diverse and prolific amounts of information, the main point
becomes obfuscated. Since none of the Mafia plots succeeded, one
could claim they were ineffectual. The huge amount of publicity
garnered by them could eventually be deflected onto the Mob's
role in them and not the Agency's. The AM/LASH plots, exposed in
even more copious documentation, could be used in a similar way.

If Castro knew about these plots within his midst, couldn't he
then claim turnabout and use the same tactics by employing a
Communist in the U.S. to kill Kennedy? This, or a combination of
the two, has been what suspect writers like Jean Davison and Jack
Anderson have been foisting on the public for years.

The Establishment Takes Some Hits

The political fallout from the Church Committee

RFK does not pursue Giancana, they are
actually pals in MONGOOSE. The Kennedys agree with the Joint
Chiefs: we should invade Cuba. And then escalate in Vietnam.
Disinformation feeds on disinformation, and whatever the record
shows is shunted aside as the tabloid version becomes "accepted
history," to use Davis' phrase (p. 290). The point of this
blurring of sources is that the Kennedys, in these hands, become
no different than the Dulles brothers, or Nixon, or Eisenhower.
In fact, Davis says this explicitly in his book(pp. 298-99). As
I noted in the last issue, with Demaris and Exner, the Kennedys
are no different than Giancana. And once this is pounded home,
then anything is possible. Maybe Oswald did work for Giancana.
And if RFK was working with Sam, then maybe Bobby unwittingly had
his brother killed. Tragic, but hey, if you play with fire you
get burned. Tsk. Tsk.

But beyond this, there is an even larger gestalt. If the Kennedys
were just Sorenson-wrapped mobsters or CIA officers, then what
difference does it make in history if they were assassinated? The
only people who should care are sentimental Camelot sops like

described in these articles. The
overall tendency has become so prevalent that, as many have
noted, tabloid sales in the U.S. have declined of late because
the mainstream media have now bowed to these tendencies so much
that much of their news has seeped over, thereby blurring the
lines between the two. In my view, some of the milestones in this
trend have been examined in this article: in the nonfiction book
field it would be the Collier-Horowitz book; in magazine
journalism, the Kitty Kelley article on Exner; in television, the
1985 Rivera controversy about Summers' book.

This blurring of tabloid and journalistic standards inevitably
leads to a blurring of history. With people like Kelley, Rivera,
and Exner commenting, the Kennedys get inserted into a giant
Torbitt Document of modern history. With people like Davis
translating for them, RFK does not pursue Giancana, they are
actually pals in MONGOOSE. The Kennedys agree with the Joint
Chiefs: we should invade Cuba. And then escalate in Vietnam.
Disinformation feeds on disinformation, and whatever the record
shows is shunted aside as the tabloid version becomes "accepted

Davis, Waldron likes to use CIA
sources like Bill Colby (Mr. Phoenix Operation) on JFK's ideas
about assassination. Just as Newman corrected the Vietnam record
in 1992, his long-awaited book Kennedy and Cuba will do much to
correct these dubious assertions.

"Liberal" Turncoats:
Collier and Horowitz

The same year that the Davis book appeared, another anti-Kennedy
book was published. It was entitled The Kennedys: An American
Drama, and was written by Peter Collier and David Horowitz. These
two were both former editors at the liberal Ramparts publication.

After the magazine folded, both began to write biographies of
famous American families while on their way from the left to the
extreme right. In order, the pair examined the Rockefellers, the
Kennedys, the Fords, and the Roosevelts. As with Davis, it is
interesting to note the difference in their treatments of the
Rockefellers (1976) and the Kennedys (1984). In the earlier book,
the authors note toward the end that they had access to the
Rockefeller family archives (p. 636). In another book of theirs,
Destructive Generation, they write that the Rockefeller book
began when the pair were soliciting funds to keep Ramparts afloat
(p. 275). This is how they got in contact with the younger
generation of that clan. So when the magazine fell, they went to
work on the family biography with access to people and papers
that no outside, nonofficial authors had before. It is
interesting that, in 1989, the authors wrote that when they
started the Rockefeller book, they were expecting to excavate an
"executive committee of the ruling class" and thereby unlock the
key to the American power elite. But they found that they only
ended up writing about American lives (Ibid). They ended up with
that result because that seems to have been the plan all

that Jim Marrs recently sent me may help explain it. He sent me
the full text of a memo that he references in his current book,
Alien Agenda. The memo supposedly reports on information gleaned
from an FBI wiretap of Dorothy Kilgallen's phone. The document
went from the FBI to the CIA, where it was signed by James
Angleton. In it, a man named Howard Rothberg is quoted as saying
that Monroe had conversations with the Kennedy brothers on top
secret matters like the examination of captured outer space
creatures, bases inside of Cuba, and of President Kennedy's plans
to kill Castro. He also said that she was talking about a "diary
of secrets" (quotes in original) that she had threatened RFK with
if he brushed her off. When I got this memo, I was struck by its
singular format. I have seen hundreds of CIA documents, maybe
thousands, and I never saw one that looked like this. (We can't
reproduce it because the copy sent to us is so poor). I forwarded
it to Washington researcher Peter Vea. He agreed it was highly
unusual. To play it safe, I then sent a copy to former
intelligence analyst John Newman. He said that he had seen such
reports. What he thought was wrong with it was that there were
things in

language: Article 2

The Organization and its Members, in pursuit of the Purposes stated in Article 1, shall act in accordance with the following Principles.

. . . .

3. All Members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.

4. All Members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the Purposes of the United Nations.

Iraq, the United States, and the United Kingdom are all Founding Members of the United Nations Organization. Not that it mattered to the United States and the United Kingdom. Reversing the Stimson Doctrine When imperial Japan invaded China in 1931 in order to loot and plunder Manchuria, the United States government adopted what came to be known as the Stimson Doctrine, after then U.S. Secretary of State Henry Stimson: Namely, that the United States government would not recognize any legal consequences flowing from a violation of the Kellogg-Briand Peace Pact, otherwise known as the Pact of Paris.55 Despite the fact that the United States was not a Member of the League of Nations, nevertheless the League of Nations endorsed the Stimson Doctrine with respect to the Japanese aggression against China and in order to secure the non-recognition Japan's establishment of its puppet-state of "Manchuko" in Manchuria. Furthermore, on 11 March 1932 the League of Nations Assembly passed a Resolution official

de-Baathification; indoctrinating Iraqi
schoolchildren with American propaganda; etc. Putting the future of Iraq
up for sale to the lowest American (and then British and Israeli)
bidders. Even worse yet, the Bush Jr administration then went to the
United Nations Security Council where it procured Resolution 1472 (28
March 2003) effectively ratifying the status quo of the United States
and the United Kingdom as the belligerent occupants of Iraq. Pursuant to
the requirements of the United Nations Charter, the United Nations
Security Council should have soundly condemned the United States and the
United Kingdom for their naked aggression against Iraq, and have
demanded their immediate withdrawal from that victim U.N. member state,
together with the payment of reparations to Iraq for their joint and
severable aggression. Chapter VII of the United Nations Charter mandates
that the Security Council act immediately and effectively to prevent,
repress, and reverse "threats to the peace, breaches of the peace, and
acts of aggression." By contrast, from August 2002 through March 2003
the Me

of poor Blacks, Latinos and Whites off to kill and be killed in Afghanistan, Iraq, and elsewhere. Just like their elitist predecessors did a generation ago in Vietnam, Cambodia, and Laos. Class warfare indeed. Finally, in September 2002 the Bush Jr. administration adopted and officially approved "the National Security Strategy of the United States," that was transmitted to the U.S. Congress as a declaration of official policy by the United States of America, fully embracing this reprehensible, criminal, and Nazi doctrine of preventive warfare.38 I will not waste the reader's precious time here analyzing this criminal document in extenso. But it reads like a Nazi war planning document that could have been introduced into evidence before the Nuremberg Tribunal.

Certainly its most odious language is: ". . . we recognize that our best defense is a good offense. . ." In other words, the United States government has publicly admitted in an official government document that it is now prepared to wage offensive warfare against its chosen adversaries around the world irrespective of the requirements of the United Nations Charter, the Kellogg-Briand Peace Pact, as well as the Nuremberg Charter, Judgment, and Principles, inter alia. I could file this official U.S. government document with the International Court of Justice in The Hague as proof-positive that it is now the official policy of the United States government to wage criminal wars of aggression against other U.N. member states in violation of the most elementary principles of the contemporary international legal order that would be too numerous to list here. What lawyers call an "Admission Against

Inga
Arvad, who he wanted to marry, but very few others. So I flipped back to see who the source was. The footnote read "Authors' interview with Priscilla McMillan." I then remembered that, by this time, Priscilla had been classified by the CIA as a "witting collaborator." I also recalled that years later, Priscilla changed her "Platonic" relationship with JFK for the National Enquirer. She was now saying that young Jack had actually made a pass at her.

With this in mind, it is instructive to note that in Destructive Generation, Collier reveals that in 1979 he started lecturing for the United States Information Agency (p. 275). The USIA has a long, involved association with the CIA and actually disseminated propaganda for the Warren Commission. The date of Collier's work approximates the time when the Kennedy book idea was originated.

Ignoring the shoddy approach and scholarly standards of the work, the New York Times, Washington Post, and New Republic all gave the book prominent and glowing reviews. In the latter case, Martin Peretz placed the book on the August 27, 1984 New Republic cover under the title "Dissolute Dynasty." He then got longtime Kennedy basher Midge Decter to write a long review that branded the saga "a sordid story." Right after this ecstatic reception, in 1985, Horowitz and Collier landed a feature story in the Washington Post as "Lefties for Reagan." Two years later, the pair went on a USIA-State Department sponsored tour of Nicaragua.

This was at a time when the CIA was dumping millions into that country in a huge psychological and propaganda war effort. That same year, with lots of foundation money, the pair arranged a "Second Thoughts

turn over RFK's private snuff film of Monroe's murder?
Will Hersh now say that he was duped on the Monroe docs but now he has the real McCoy: it was Jayne Mansfield all along. With Liz Smith as the moderator, satire is impossible in this field.

But down deep, submerged but still present, there is a resistance to all this. The public knows something is wrong. Two years ago, CBS and the New York Times conducted a poll which asked the respondents: If you could pick a President, any President, which one would you choose to run the country today? The winner, in a landslide, was John F. Kennedy who doubled the tally of the second place finisher. In 1988, Rolling Stone surveyed the television generation, i.e. the below forty group, on their diverse opinions and attitudes. Their two most admired public leaders were Bobby Kennedy and Martin Luther King, dead twenty years before, when many of those polled were infants or not even born. This holds not just in America. In Pete Hammill's 1995 book Piece Work, he relates an episode in his life when his car broke down in the Mexican countryside. He walked to a poor, Third World style hut which had no amenities except a phone. Before he left, he thanked the native Mexicans who lived there and took a look around the dilapidated, almost bare interior. The only decorations he saw were a plaster figurine of Che

so poor). I forwarded
it to Washington researcher Peter Vea. He agreed it was highly
unusual. To play it safe, I then sent a copy to former
intelligence analyst John Newman. He said that he had seen such
reports. What he thought was wrong with it was that there were
things in it that should have been redacted that weren't and
things exposed that should have been blacked out. For instance,
there is a phrase as follows, "a secret air base for the purpose
of inspecting [things] from outer space." Newman notes that the
brackets around the word "things" denote that it had been
previously redacted. It should not have. The words "outer space"
should have been redacted and they never were. On the basis of
this and other inconsistencies, he decided it was a "good"
forgery from someone who knew what they were doing. He told PBS
this four years ago when they showed it to him. The fact that
this document purportedly revealing sensitive information was
exposed in 1993 when he saw it, before the JFK Act when into
effect, justifies even more suspicion about its origin and
intent.

Spoto's book adds more to the suspicion about the document, and
perhaps the information in Capell's pamphlet. Spoto notes that on
August 3, 1962, the day the above memo was distributed, Kilgallen
printed an item in her column saying that Marilyn was "vastly
allurin

because he fishes for
substantiation outside of the Church Committee report. Davis states that his quest for this led him to the home of none other than Richard Helms (Ibid, p. 289). Helms told Davis, "that he believed Bissell was correct, that, knowing him, he would not commit perjury before a Senate committee." (Ibid). Davis leaves out the fact that perjury is precisely what Helms committed before a Senate committee in 1973 about CIA involvement in Chile.

He also fails to tell the reader anything about the Helms-Bissell relationship, which makes his "vouching" for Bissell almost humorous. When the two were in the CIA, there were few rivalries more pronounced and few resentments more public than the one between Bissell and Helms, who resented his boss because Bissell kept him out of the loop on some operations. Helms, according to Evan Thomas' The Very Best Men, was happy to see the Bay of Pigs capsize because it meant Bissell would be out and that Helms would move up (p. 268). So, to most objective readers, if Helms has now switched to endorsing Bissell, there must be some extenuating circumstances involved. There are, and again, Davis does not tell the reader about them. As the Inspector General's report tell

service(!), they found out she was dead. They proceeded to the Bradlees' home to make funeral arrangements. Later that night, Jim Angleton returned to Mary's, but only to retrieve her kittens. The Truitts then called the Angletons (the time is not mentioned). In Rosenbaum's version, it is the Truitts who are entrusted with the diary. In an even more serious difference, the search for the diary occurs five days after the murder. This time the search party includes the Angletons, Tony Bradlee and - making their first appearances - Mary's ex-husband Cord Meyer, and Mary's old college roomie Ann Chamberlain. The search goes on for hours amid drinking and even dishwashing by Angleton. The diary is not found. Later (at an unspecified time) Tony Bradlee finds it in the studio, this time in a locked steel box. And this time, there are "hundreds" of letters, not just several. In the Rosenbaum version, Angleton says that he burned the whole package. Yet Rosenbaum also writes that other unnamed sources say the contents were sent to the Pinchot estate in Milford, Pennsylvania.

I could also quote other versions of the diary search e.g. the sketchy one in the book Katherine the Great. But the point is clear that someone - perhaps more than one - is lying. The versions are not reconcilable. And they can't be chalked up to memory la

at the time of the release of Oliver
Stone's JFK. But historically speaking, the attacks on the
Kennedys, both Jack and Robert, have not come predominantly from
the left. The attacks from the right have been much more
numerous. And the attacks from that direction were always harsher
and more personal in tone. As we shall see, that personal tone
knows no limits. Through papers like the New York Times and
Washington Post, the attacks extend into the Kennedys' sex lives,
a barrier that had not been crossed in post-war mainstream media
to that time. To understand their longevity and vituperativeness,
it is necessary to sketch in how they all began. In that way, the
reader will be able to see that Hersh's book, the Vanity Fair
piece on Judith Exner, and an upcoming work by John Davis on Mary
Meyer, are part of a continuum.

The Right and the Kennedys

There can be no doubt that the right hated the Kennedys and
Martin Luther King. There is also little doubt that some who
hated JFK had a role in covering up his death. One could use
Secret Service agent Elmer Moore as an example. As revealed in
Probe (Vol. 4 No. 3, pp. 20-21), Moore told one Jim Gochenaur how
he was in charge of the Dallas doctors testimony in the JFK case.

One of his assignments as liaison for the Warren Commission seems

this? A "senior CIA official" (Anson p.
115). Did Ewing follow the Davis example and lunch with Richard
Helms?

Not since Gerald Posner has a book on the JFK case been as touted as Hersh's. It started in Esquire with a teaser article in its September 1996 issue. In July and September of this year, Liz Smith kept up the barrage of pro-Hersh blurbs in her column. The September 23rd notice stated that Hersh's book would focus on the Kennedys and Monroe and how RFK had Monroe killed.

As everyone knows by now, the whole Monroe angle blew up in Hersh's face. When Hersh had to reluctantly admit on ABC that he had been had, he did it on the same spot where Rivers, Summers, and Sylvia Chase had played martyrs for the tabloid cause, namely 20/20. On September 25th, Peter Jennings narrated the opening segment of that program. With what we know in November, Jennings approach reveals much by what was left out. Hersh appeared only briefly on the segment. He was on screen less than 10% of the time. The main focus was on the forensic debunking of the documents (which we now know was underplayed by ABC.) Jennings cornered Lex Cusack, the man who "found" the papers in the files of his late father who was an attorney. From published accounts, the documents were supposedly signed by five people: JFK, RFK, Monroe, Janet DesRosiers (Joe Kennedy's assistant) and Aaron Frosch (Monroe's lawyer). They outline a settlement agreement between JFK and Monroe signed at the Carlyle Hotel in New York on March 3, 1960. The documents set up a $600,000 trust to be paid by contributions from the individual Kennedy fami

over all his children is a prime
motif of the book. The second theme that will be followed is the aforementioned female associations. The third repeating pattern the Blairs' established is the use of Kennedy's health problems as some kind of character barometer. That because Kennedy and his circle were not forthright about this, it indicates a covert tendency and a penchant for covering things up.

It would be easy to dismiss The Search for JFK as a slanted book, and even easier to argue that the authors had an agenda. Clay Blair was educated at Tulane and Columbia and served in the Navy from 1943-1946. He was a military affairs writer and Pentagon correspondent for Time-Life from 1949 to 1957. He then became an editor for the Saturday Evening Post and worked his way up to the corporate level of that magazine's parent company, Curtis Publications. Almost all of his previous books dealt with some kind of military figure or national security issue e.g. The Atomic Submarine and Admiral Rickover, The Hydrogen Bomb, Nautilus 90 North, Silent Victory: the U.S. Submarine War Against Japan. In his book on Rickover, he got close cooperation from the Atomic Energy Commission and the book was screened by the Navy Department. In 1969 he wrote a book on the Martin Luther King murder called The Strange Case of James Earl Ray. Above the title, the book's cover asks the question "Conspiracy? Yes or No!" Below this, this the book's subtitle gives the answer, describing Ray as "The Man who Murdered Martin Luther King." To be sure there is no ambiguity, on page 146 Blair has Ray shooting King just as the FBI says he did, no surprise since Blair acknowledges help from the Bureau and various other law enforcement agencies in his acknowledgements.

The Ray book is basically an exercise in guilt through character assassination. This practice has been perfected in the Kennedy assassination field through Oswald biographers like Edward Epstein and Priscilla

was Jack really like? Could one, at
this early date, cut through the cotton candy and find the
real man? (p. 10)

In several ways, this is a revealing passage. First of all, the
authors apparently accept the Washington Post version of
Watergate-i.e. that Nixon, and only Nixon, was responsible for
that whole range of malfeasance and that Bob Woodward and Carl
Bernstein got to the bottom of it. Second, it seems to me to be a
curious leap from the politically misunderstood shenanigans of
Watergate to the formative years of John Kennedy's college prep
days and early adulthood, which is what this book is about. It
takes JFK from his days at the exclusive Choate School in
Connecticut to his first term as a congressman i.e. from about
1934 through 1947. I don't understand how comparing the political
fallout from Watergate with an examination of Kennedy's youthful
years constitutes a politically valid analogy. Third, the Blairs
seem a bit behind the curve on Nixon. If they wanted to find out
the "truth" about Nixon all they had to do was examine his
behavior, and some of the people he employed, in his
congressional campaign against Jerry Voorhis, his senatorial
campaign against Helen Douglas and, most importantly, his
prosecution of Alger Hiss. These all happened before 1951, two
decades before Watergate. Nothing in JFK's political career
compares with them.

The book's ill-explained origin is not its only problem. In its
final form, it seems to be a rush job. I have rarely seen a
biography by a veteran writer (which Clay Blair was) so poorly
edited, written, and organized. The book is nearly 700 pages
long. It could have been cut by a third without losing anything
of quality or substance. The book is heavily reliant on
interviews which are presented in the main text. Some of them at

There are, and again, Davis
does not tell the reader about them. As the Inspector General's
report tells us, when Dulles and Bissell began cleaning out their
desks, a new team took over the Castro plots, namely Bill Harvey
and Ted Shackley. The man they reported to was Helms, the highest
link in the chain (Alleged Assassination Plots pp. 148-153). In
other words, the alchemy of John Davis with Bissell helps get
Helms off the hook for responsibility for the continuing
unauthorized plots. And Helms needs all the help he can get. When
John McCone (Kennedy's replacement CIA Director) expressly
forbade any assassination plots, Helms said he couldn't remember
the meeting (Ibid, p. 166). When evidence was advanced that, in
direct opposition to Bobby's wishes, Helms continued the Castro
plots and allowed an operative to use RFK's name in doing so,
Helms said he didn't remember doing that either (Ibid p. 174). On
the day that RFK met with CIA officials to make it clear there
would be no more unauthorized plots against Castro, Kennedy's
calendar reads as follows: "1:00-Richard Helms." Helms could not
recall the meeting (Ibid p. 131). With this much to explain away,
Helms must have poured coffee for Davis the day they met.

But Davis is not done. He also writes the following:
Kennedy also met on April 20 with the Cuban national
involved in the unsuccessful underworld Castro assassination
plot, a meeting that was not discovered until the Senate
Committee on Intelligence found out about it in 1975. That
Kennedy could have met with this individual, whose name has
never bee

elections to him. Leary, who mentioned many of those he turned on throughout his books, and thanks those who believed in him, deemed this unimportant. That is until the 20th anniversary of JFK's death. (Which is when Rosenbaum wrote his ugly satire on the Kennedy research community for Texas Monthly which in turn got him a guest spot on Nightline.) This is also when Leary began hooking up with Gordon Liddy, doing carnival-type debates across college campuses, an act which managed to rehabilitate both of them and put them both back in the public eye.

There is another problem with Leary's book: the Phil Graham anecdote. In his book, Leary has Mary tell him that the cat was out the bag as far as her and JFK were concerned. The reason was that a well-known friend of hers had blabbed about them in public. This is an apparent reference to Post owner Phil Graham's outburst at a convention in Phoenix, Arizona in 1963. This famous incident (which preceded his later alleged mental breakdown) included - according to Leary - a reference to Kennedy and Mary Meyer. The story of Graham's attendance

and cultural overtones. Egged on by advocates of Judith Exner (e.g. Liz Smith and Tony Summers), this political and cultural time bomb landed in Sy Hersh's and ABC's lap. When it blew up, all parties went into a damage control mode, pointing their fingers at each other. As we examine the sorry history of all three industries, we shall see that there is plenty of blame (and shame) to be shared. And not just in 1997.

As we saw in Part One of this article, as the Church Committee was preparing to make its report, the Exner and then Mary Meyer stories made headlines in the Washington Post. These elements-intrigue from the CIA assassination plots, plus the sex angles, combined with the previous hazing of Richard Nixon over Watergate-spawned a wave of new anti-Kennedy "expose" biographies. Anti-Kennedy tracts were not new. But these new works differed from the earlier ones in that they owed their genesis and their styles to the events of the mid-seventies that had brought major parts of the e

were there. None of the attendees recalled
anything said about Mary Meyer.

To me, this apocryphal anecdote and Leary's book seem ways to
bolster a tale that needed to be recycled and souped up before
its chinks began to show. Leary's reason for being a part of the
effort may be through his association with intelligence asset
Liddy. Or it may be because he was never enamored of the
Kennedys' approach to the drug problem, which was antagonistic to
Leary personally and a lot less liberal in its approach. Leary
was quite frank about this in his book High Priest (p. 67) and
later in Changing My Mind (pp. 143 ff.). Whatever his motives,
Leary's retroactive endorsement is just not credible.

The Split at the Post

In fact, when it comes to Mary Meyer, stories between the same
couple are not consistent. As mentioned previously, Bradlee
states in his book that Kennedy's name was not in the diary. Yet
his wife told The National Enquirer, that although she only
looked at it briefly, Kennedy's name was there. According to an
interview with writer Debbie Davis, Ben Bradlee once told
television personality David Frost that the diary was not even a
diary but in fact a sketchbook.

In this regard, Tony Bradlee made a telling comment to the
National Enquirer in 1976. In the notes written up from her
interview, after she has discussed (with a bit of ambiguity)
whether or not Kennedy's name was in the diary, she is quoted as
saying: "But the diary was destroyed. I'll tell you that much is
true." The suggestion in the last sentence is that everything
else is not. Or, at least, the diary's destruction is all she
knows for a fact.

If Mary's own sister is not forthright, then who amo

No, not really. If anything it would probably be a lot of work to get
things so the performance is not degraded.

World War.33
Including and especially the United Nations Charter, as well as the Nuremberg Charter, Judgment, and Principles, inter alia. All of which had heretofore been the bedrock upon which the entirety of the post-World War II international legal order rested.34 Nazi Ideology

Iraq had been continuously and illegally bombed by the United States and the United Kingdom since the end of the Bush Sr. Gulf War in 1991 under the pretext of enforcing unauthorized and clearly illegal no-fly zones.35 But in order to accomplish their objective of seizing Iraq outright, the Bush Jr. warmongers had to articulate another operational rationale for a war of aggression that they could then sell to the American People and Congress that was separate and apart from their fatuous "war against international terrorism."36 So they resurrected the long-ago discredited Nazi doctrine of "preventive warfare," once again using the terrible tragedy of 11 September 2001 as a pretext for doing so. The first overt step in their plan was the Bush Jr. aggressive threat to Iraq uttered during the course of his State of the Union Address to the United States Congress on 29 January 2002, branding Iraq as part of some so-called "axis of evil" along with Iran and North Korea.37 By means of employing this provocative language harkening back to the World War II "axis" of Nazi Germany, Fascist Italy, and Imperial Ja

Hi Jeff,
Wow, what a mess of replies you got, but nobody offering to sell you
one.
I have 2 possibilities:
1 - what appears to be a hombrew "repackage" of an AC-3 on a small
chassis. It looks like the components are from an AC-3. I powered it up
some time ago to ck voltages, seemed OK, but I didn't put it to any rig.
It needs am AC cord, and has a female jack for outputs.
2 - a stout HB supply in a covered chassis like they used to put audio
amps in. I used this for a while with a T-4X. It has a terminal strip on
the back, and a cable with the proper Drake plug.
I can take digipix of both.
$25 for #1
$50 for #2
plus postage

>Any advice, thoughts, comments appreciated.

The answer is "it depends"...

There are miniature equivalents or near-equivalents of many metal tubes.
(AFAIK, all metal tubes are octals, btw). For example, the miniature 6AQ5 is a
very close equivalent to the 6V6, except the interelectrode capacitances are a
little different and the maximum ratings somewhat lower. If you can't get the
metals but can get or have the miniatures, such a substitution can be really
useful.

Performance improvement is more complicated. Development of metal receiving
tubes pretty much ended during WW2, and postwar development was almost all
aimed at miniatures. So you can find miniature receiving tubes with much better
characteristics. For example, about the best remote-cutoff pentode metal tube
you'll find is the 6SG7, which is pretty close to the miniature 6BA6 in
performance. Later miniature remote-cutoff pentodes such as the 6BZ6 and 6EH7
have more gain and less noise, and can really hop up an older receiver.

But you can't just substitute them and get a big improvement, in most cases.
The different capacitances can require realignment, the voltage/current
requirements are usually different, etc. Most of all, the higher-gain new tubes
may cause stability troubles. All of these difficulties can be overcome, of
course, but doing so requires a bit of redesign of the various stages.

There was a time when such tube substitutions were commonplace in ham gear,
because a lot of hams could better afford hopping up an old receiver rather
than buying a newer one. Nowadays, historical preservation is often the
deciding factor.

What receiver(s) are you trying to improve?

Alexander
Cockburn which occurred at the time of the release of Oliver Stone's JFK. But historically speaking, the attacks on the Kennedys, both Jack and Robert, have not come predominantly from the left. The attacks from the right have been much more numerous. And the attacks from that direction were always harsher and more personal in tone. As we shall see, that personal tone knows no limits. Through papers like the New York Times and Washington Post, the attacks extend into the Kennedys' sex lives, a barrier that had not been crossed in post-war mainstream media to that time. To understand their longevity and vituperativeness, it is necessary to sketch in how they all began. In that way, the reader will be able to see that Hersh's book, the Vanity Fair piece on Judith Exner, and an upcoming work by John Davis on Mary Meyer, are part of a continuum.

The Right and the Kennedys

There can be no doubt that the right hated the Kennedys and Martin Luther King. There is also little doubt that some who hated JFK had a role in covering up his death. One could use Secret Service agent Elmer Moore as an example. As revealed in Probe (Vol. 4 No. 3, pp. 20-21), Moore told one Jim Gochenaur how he was in charge of the Dallas doctors testimony in the JFK case.

One of his assignments as liaison for the Warren Commission seems to have been talking Dr. Malcolm Perry out of his original statement that the throat

No, I am not.

Oh....in other words he does have a sailors swing. Thats good, perfectly sent CW is boring. I remember when one ''used'' to be able to tell each other by their fists. No longer.

I have to agree with the other posts and say that its probably not worth the effort. If the primary reason for the effort is to improve sensitivity, a tunable RF preamp (e.g.: Ameco PCLP) with a decent n.f. will oft times work wonders. I use one of these in-line with the antenna selector of receivers such as the RBS, RBM, BC-348, BC-312, various older Hammarlunds and Hallicafters with excellent results on the higher bands. One size fits all!!

My most recent project is making a replica receiver - but using octal tubes
to replace the original miniature one.

Wonder what would happen to my GPR-90 value if I spent about a month to
convert it to octal based equivalents?

Fortunately, other projects are more in front of that one.

Yup. I just rebuilt an old Heathkit resistor substitution box, 1966 vintage, and the resistors were absolutely wild. Some were better than double the rated value. I don't think I saw any decrease in value. None had any obvious sign of overheating.

Having said that, different manufacturers' resistors held up better than others, but today, they are all doubtful. The ABs were good when they were new, the Ohmites were OK, and the IRCs were questionable from the minute they left the factory.

I didn't know anybody repairs TV's anymore! <g>

If you had read my entire post, you would have noticed that I wasn't endorsing carbon comps for every resistor design. Consumer electronics is better served by metal film discretes or SMT bricks.

I was addressing the sweeping condemnation of carbon comps (I suppose from consumer techs with limited exposure). I suppose you might have noticed when I was talking about my using 2-watt carbon comps in pulse generators and dummy loads; you don't see much of that inside a TV.

Just as IC's haven't replaced tubes in EVERY application, carbon comp resistors still are the best solution in a few instances, and I hope the technology isn't completely abandoned.

Astatic sold the last new units out over a year ago. Some "dealers" have
been selling them on ebay but I haven't seen them lately. There is really
no decent sounding substitute for the original large diaphram crystal
element.

A long shot but look up Bob's CB in Boston, or he may know where to get
one..........ebay may be your only hope, however.

And the *tunable* preamp will also get rid of the image problems that plauge
single-conversion receivers.

I did have an RME pre-amp, with 6BA6s, but never got it going. It ocvered only
the upper Ham bands.

Now, are there general-coverage tunable preamps? Of the hollow-state variety?

Everyone gave their opinion about tube equivalents, but you can also go solid state. There was a series of articles, I believe in QST, many years back about replacing tubes with solid state transistor/fet equivalents. I did it myself over 20 years ago to a general coverage receiver that I had. I just built what I needed on blank tube plugs to avoid a lot of circuit rework. The only thing I changed under the chassis was the power distribution. I ran everything from 24 volts. I didn't make any definitive measurements, but it did seem to perk up the top band reception. I still have the radio, but then I seldom throw anything out, and it still works.

You can probably get ahold of these articles on the QST CDroms that are available. I don't remember the years, however.

No way to listen to my first boatanchor, a beautiful R-388 arriving in 3-5 days. Anyone have a good 8" or so speaker? An original Collins would be nice but I need something now. Also like the metal Hammarlunds. Are military speakers decent sounding? Suggestions welcome.
Thanks.
Phil (not Diane)

Go to your local installed sound contractor and buy an 8" PA speaker with
a 70V transformer. Speaker, cabinet, and transformer should come to around
$20 new. Runs nicely with a 600 ohm source, and I think it sounds better
than typical military comm speakers.

If you ask nicely, lots of the installed sound guys will give you free ones
pulled out of old installs.

"See! I knew it! I'm going straight to hell, right along with Mr.
Farnsworth!"

Mr. Farnsworth developed a teaching method. In the Farnsworth method,
as the speed approaches 20wpm, the differences between Farnsworth and
Morse begin fading away, and are gone entirely at 20wpm. The
Farnsworth teaching method is not meant to be implemented as Morse
Code, but you and all the rest of you OF's pretty much do as you
please. After all, you own ham radio.

Here's an example: "Leff right leff" is a method of teaching marching.
It is not a legitimate way to call cadence and is abandoned once
recruits learn to march, not that the Navy does much marching or needs
to know left from right. They got starboards, bulkheads and decks.
;^)

"BTW, who brought up "Technician"? I'm an equal opportunity sort of
guy; I don't
care what the license class of the robot is."

One of the old farts, now SK, was specifically targeting the NCT's with
his illegible "banana boat swing" transmissions. He said so himself,
and that is the incident that both you and I are referring back to.
73 and Merry Christmas, bb

Someone gave me an old ARC 5 (7-9.1) transmitter found at the county dump. I would like to see if I can get it going on 40 meter CW. I have found some information online, namely a schematic and an article for "converting to Amateur use". I realize this is a crap shoot, but I think it would be fun trying. I am trying to verify the wiring according to this old schematic knowing that so many units have been hacked into over the years. I have put together a power supply along the lines of the reprinted "converting" article available at the ARRL website. The Xtal in this unit is 8870 KC. Is this OK? How does this Xtal function in this otherwise VFO unit, and what determines the frequency that was chosen for this xtal? Other information or sources of information would be welcome. Anyone else have any luck with these things? Any recommendations?

You should not have any strange problems getting it running. The xtal was selected for each mission. The crystal is used as a reference for setting the VFO frequency. In the check position, the VFO and crystal oscillator are both on, and when the vfo comes close to the crystal freq you will see the affect on the tuning eye.

Have a ball.

Tnx, Oh, I see, you calibrate the tuning dial by using the Xtal as a reference knowing it is at the stated Xtal frequency when the magic eye peaks. I assume you use the little knob next to the dial for this tweaking? or do you loosen the dial and re-set it according to this calibration?

Just turn the vfo freqency knob to see the zero beat, then lock it.

In ham use you would not usually use the crystal check/set feature, but you could. The crystal's socket probably would accept an FT243 mounted crystal.

Bill, There is also a tuning eye tube in back of xmtr , the Xtal and tuning eye is used to calibrate the VFO .You won`t need the Xtal or eye tube for ham use.. I used an Arc 5 about 60 years ago on 40 mtrs. I had pretty good output BUT it chirped like all crazy..there were several schemes to get the chirp out, none of them worked very well..If you can get the VFO to key without chirping it will be all OK. Good luck 73 Harold W4PQW

The ARC-5 transmitter is one of the great piece of electronics out of WWII. As a kid, my first transmitter was an ARC-5 bought from JJ Glass of Los Angeles for about $5.95. It was brand new and a beauty to behold. Getting it working right will teach you everything that you need to know about electronics (well as of 1957 anyway).

I was able to get mine to key nicely with no chirp at all. I still have a wall full of them, they are nice to look at. You should be able to find a schematic on the internet. I found that adjusting the oscillator plate voltage to the individual transmitter could help solve a lot of problems and regulated dc on the filaments does wonders, too. They will run 100 watts without too much strain, although the power supplyis often twice the size of the transmitter. But, they also run qrp on a much smaller supply and lower voltage.

Have fun, Colin K7FM

Thanks to everyone for the encouragement. Next step is to make the conversion to this little power supply, then tweak that oscillator plate voltage etc. and see if I can get it on the air. I have already decided not to worry about keeping this thing "original", eg. will be putting in a new power plug, key jack, and coax connector etc. I am sure I will have many more questions as I proceed and will keep you posted with the progress and inevitable mysteries that will need solving....

Why do you think the regulated dc on the filaments makes such a difference? Closer to the original battery powered situation? Would that be true for any old tube transmitter? Or because these particularly were originally designed to run on 28 volt DC.

On the 6-9MHz one I had many moons ago the xtal cal point was up at the top end, close to 9 MHz and didn't serve much of a purpose for exact 7 MHz calibration. Of course I was *supposed* to be using xtals as a Novice :-)

It would be preferable just to accurately set the dial at 7MHz. Once its set its very accurate. Its will be as exact as you can interpolate across the little swath of the 40 CW band.

Question: "Why do you think the regulated dc on the filaments makes such a difference? Closer to the original battery powered situation? Would that be true for any
old tube transmitter? Or because these particularly were originally designed to run on 28 volt DC."

The oscillator obtains feedback by tapping the cathode up on the coil. This allows the ac on the filaments to modulate the oscillator slightly. A filament winding was added to reduce this effect, but it does not. Some ARC-5s have hum modulation - especially when multiplying to 10 meters.

Also, a change in filament voltage causes drift of the vfo. When we were converting these rigs 50 years ago, it was difficult to get 24 volts regulated. Today it is a snap. It may be easier to get a regulated 13.8 volts (or 12 volts or anything in between).

In my early hamshack, the test for stability was to switch on the heater and listen for drift about 30 seconds later. Even the heralded SX-101 would drift mightily on 10 meters when I did that trick - until I regulated the filament voltage on the oscillator using the separate transformer that always kept the heater on.

It is certainly your radio and you can do as you wish,
but I urge you to reconsider; this isn't a old Craig CB rig
or and Eico 753. This radio has historic significance.

Extensive modification is needless
and will turn your historic relic into a junkbox nothing.
You can get the rig on the air with a good signal
without drilling a single hole or chopping out anything.
It's as simple as disconnecting
one wire and adjusting one relay contact.
If you need pins to fit the power connector on the back,
send me your address and I'll send you some.
Moreover, if you do the butchery to put the filiments on
12 volts AC, you are defeating part of the engineering solution
designed to keep the rigs stable.
My rigs are original design and work great with
good power out and little or no chirp.

First- throw out ALL those "conversion" articles from
the 50s, 60s and 70s. The first ones were written by
people who knew nothing about getting these rigs going
and the rest just parroted what the first wrote.
I can't tell you how many rigs went from "war relic"
to "trash can" because of some conversion "author."
The rigs are NOT TVI machines, chirp factories,
harmonic generators or any of the other myths
you've heard. These were born out of people flailing
around blindly without any understanding of how
the rig was designed to work.

I have lots of information on how to get these going
with little work and no irreversable mods.
I'm headed to work. If anyone cares to read them,
I will post them when I get home this evening.

God bless you; you're just the man I'm looking for.
Do you have any idea what the MF ARC-5 transmitters
were for? These are the rare :
T-15, 500-800 KC
T-16, 800-1300 KC
T-17, 1300-2100 KC

The latest theory is that they were used in joint
maneuvers with third-world allied navies,
where were still using the 1920s-agreed navy
frequencies below 2 MC.

There so much I would love to ask you about
these sets, if you don't mind the trouble.
I'm a serious historian of the
Command Set series and gentlemen like yourself
are a treasure to find.

>and re-set it according to this calibration?

All the xtal tells you is whether the dial is close or not. Recalibration is a shop procedure. The dial is pinned - don't try to change it.

The little knobs next to each control are locks to prevent the settings from changing in flight.

In article <41BDEAEB.92D0E5EF@sonic.net>, zeno <zeno@sonic.net> writes:

>Someone gave me an old ARC 5 (7-9.1) transmitter found at the county
>dump. I would like to see if I can get it going on 40 meter CW.

First question is: What condition is it in?

If it's in original unmodified condition, or close to it, please don't hack it up. Unmodified ARC-5s *used to be* all over the place for low prices, and were often subjected to all sorts of modifications. Some mods were pretty good, most really weren't. IMHO, one that's survived this long in unmodified shape deserves to be preserved. If you don't want to keep it historically accurate, sell it to someone who does. There are plenty of hacked-up ones around to experiment with.

OTOH, if it's been through the mods already (power socket changed, lots of extra holes, coils rewound, paint largely gone, etc.) it might be OK to mod it or use it as a parts source.

>I have
>found some information online, namely a schematic and an article for
>"converting to Amateur use". I realize this is a crap shoot, but I
>think it would be fun trying. I am trying to verify the wiring
>according to this old schematic knowing that so many units have been
>hacked into over the years. I have put together a power supply along
>the lines of the reprinted "converting" article available at the ARRL
>website.

What does that conversion article show?

There was an article in the ARRL Handbooks for years that involved building an external crystal oscillator in a minibox, using a 6AG7. Most of that article was pretty good because it didn't hack up the ARC-5 too much (but it did recommend destroying the power socket, unfortunately).

>The Xtal in this unit is 8870 KC. Is this OK?

Not for ham operation!

>How does this
>Xtal function in this otherwise VFO unit, and what determines the
>frequency that was chosen for this xtal?

It allowed the dial to be checked against one known point, using the 1629 magic-eye tube. This was a simple check that could be done in the plane to be sure that things weren't way off. ARC-5 transmitters (when used in small planes) were usually meant to be adjusted on the ground by a technician, who would then lock all the settings and the pilot would simply choose which

transmitter to use.

>Other information or sources
>of information would be welcome.

KG7BZ website, if it's still operational

>Anyone else have any luck with these
>things? Any recommendations?

They are an excellent example of 1930s radio engineering at its very best. They did the job with a maximum of efficiency and a minimum of size, weight, complexity and cost. The receivers are even better.

73 de Jim, N2EY

btw, about 12 years or so ago, a local ham showed me an intact BC-459. A little dusty but completely untouched. He found it on someone's trash, wanted to know if it was worth carting to the upcoming hamfest and if so, how much to ask. I said $25 and he thought I was nuts. It was the first thing he sold.

What is the story behind W2VJZ getting a Riley letter?

The letter is sketchy and provides few real details. Was he just
frequency squatting, or are there some other issues involved?
Is this just another territorial dispute?

I knew of Irb many years ago but haven't spoken to him in over
25 years. He used to have an excellent A3E sig. on the ham
bands and may still have.

From: zeno <zeno@sonic.net>
Message-ID: <41BF61A0.D601752E@sonic.net>
Source record: 20590

The BC-459-A found at the dump, is a bare aluminum Western Electric. It has been already modified, the plug was already changed, a key jack put in the back, and a bunch of wiring mods which are incomprehensible to me. It is missing the 1629, the 1626, and the Xtal. I have since picked up another BC-459 (black) which seems to be internally unmodified and complete with all tubes and Xtal (8870 KC), although it is missing the bottom plate and the cover. It is a black, but It notice the case parts from the bare aluminum one would fit to this black one. I was also given an old homebrew power supply which still works and was apparently built to the specs that are described in the ARRL article about converting the Arc 5 for Novice use. This power supply has a male octal plug with wiring that exactly corresponds to this article, eg. it has the 12.6 V filament and a 6.3 V filament as well as all the B+ voltages as per the article. Yes this is the article which describes how to make an outboard crystal controlled oscillator with 6AG7 tube and which then plugs into the Xtal socket of the Arc 5. The modification is such that the Arc 5 can be put back to VFO operation simply by removing this outboard novice xtal unit and putting back the original Xtal.

The wiring in this first BC-459 is a mess and has been hacked up, It was going to use this unit for parts, at least use the bottom plate and the case, even though it is bare aluminum and the better unit I have is black. The better unit, as stated, seems to be internally unmodified, so doing the mods in this article would be more straight forward.

However, having now posted to this forum and having received the various suggestions, I am wondering what the best path might be here. First off, I do not understand how one would use the original plug in the back since I have never seen an original male fitting available anywhere. Secondly, I am wondering what kind of other power supply one would use to keep everything in its original context. In short I am wondering what is the best, and most practical way to get this thing operating. The only information on converstion that I have at this point is the the article which appears on the ARRL site "Coverting Surplus Transmitter for Novice Use" even though I was not going to build the outboard xtal unit as suggested. I would be interested in seeing other, perhaps superior, methods for putting this gear to use. Really, how bad is this particular article and its mod suggestions? It has been suggested that the addition of some regulation on the oscillator voltage would solve the problem of chirp/drift etc.

I would be interested in the type of mods and power supplies that you are all using which have proven successful before I proceed any further.

I am assuming there are plenty of these units preserved as museum pieces already, I was more interested in using it without necessarily turning the shack into a complete ww2 cockpit.

Yes, that is the article. I also have a power supply that works and has an octal male plug as described in that article. I would have to add an octal female socket on the back of the unmodified unit to receive this power supply plug. If I were to attempt to put the modified unit back together I would need way more information than I have at this point. For example the unmodified unit has an RF choke next to the large vertical coil in from of the 1625s, on the modified unit, it looks like it never had this rf choke installed. There are little wiring differences like this in these two units which I do not understand. The vertical coil in the unmodified unit has the red number 9295 printing on its edge, the modified unit has the number 7250 on it. I do not know what this number means (?).

What (where would I get) information would I need to rebuild a totally modified unit, to make it into some kind of an operating transmitter?

>
> >The Xtal in this unit is 8870 KC. Is this OK?
>
> Not for ham operation!

The way I understand it, this is just for calibration of the VFO, so it is OK.

My original intention was to recreate a 50's style conversion of one of these transmitters, however, I am not wondering if there is not a better way to go.

>Is this just another territorial dispute?

From what I read, the issue is pretty clear: 'VJZ appeared to think that a
particular frequency is "his". This was expressed in his response to FCC, where
he claimed it was his equivalent of a printing press.

Of course if he was using a frequency, he shouldn't have to move or shut down
unless there is an emergency. But "using a frequency" has a specific meaning to
FCC.

What project is this for? I believe the Y-732 is the current-production
Varian replacement for the YD-1381, and while it's bloody expensive it
should be a drop-in.

What band are you looking to work in? There are some other planar triodes
out there that could be a reasonable substitute with some rebiasing at
lower frequencies.

There are also a _lot_ of broadcast tetrodes out there with damaged screen
grids which can probably be found for cheap if not free, and which might be
a workable substitute at 2M or so.

I've searched the web but haven't found the answer to my
QRP CW question.

I'm looking for a QRP CW transmitter kit that includes QSK and
will mute a boatanchor receiver like an SB-303, SX-101, or 75S-1.

I realize that some receivers might not recover fast enough for
QSK.

I've looked at website ads for Ramsey, Vectronixs, and still
don't have an answer. They might do it out of the box; they
might do it with a mod but I haven't found the answer.

A couple watts of CW and capable of working with the WA6OTP PTO
kit.

Anyone got something like that working?

It was simply a friendly warning letter advising him of his bizarre behavior
but of course Irb doesn't "get it" so it won't make a difference. According
to Irb if he's listening to a frequency that makes it in use (no joke).

I have had great luck with a Heathkit signal generator into a key.

BUT, if you want to get really fancy, check out the ARRL mobile manual,
which has a really neat project transceiver. The transmitter section is
based on a 1J6G and has an optional VFO.

The TAB Book on ham radio projects also had a really neat one-tube transmitter
that was hot chassis and built around the sweep tube. No VFO, though.

Actually, plenty of VFOs out there put out enough power to be used as
QRP rigs standalone.

thanks but not exactly what I'm looking for.

I want something like a tuna-tin or peanut whistle QRP
transmitter but with QSK TR and receiver muting. I'm not saying
that the tuna-tin won't work. I don't know if it will or not. The
web articles are not explicit on that point.

I'd like 1 to 5 watts of clean CW produced by a solid state
transmitter. Something that runs on a wall wart would be best.

Crystal controlled would be OK but I've been looking at WA6OTP's website. He sells a PTO kit. Some folk have adapted it to various transmitters.

I'm not intested in a transceiver. I want it to work with a boatanchor receiver like the .35 uv, 400 Hz, 1 kHz analog readout Heathkit SB-303 or the Collins 75S-1 with a CW mechanical filter and 1 kHz PTO.

The trick is QSK, built in TR switch, and receiver muting.

I'm not interested in a transceiver. I have several boatanchor receivers that work fine.

KH6IJ (katashi) told me about 1960 that a 75S-1 with a CW mechanical filter was the "perfect" CW op's rig. At that time, he was a lowly paid University employee who ran a 75S-1 and an HT-32.

I wondered why he didn't use a 32S-1 or KWM-2. I know the reason now. The 32S-1 and KWM-2 produce CW by injecting a sinewave audio tone into the SSB circuitry. Not the best method.

CW from the HT-32 was better. The HT-32 also had the good Hallicrafter's VFO with great bandspread and smooth tuning.

I know that I can buy a Century 21, HW-16, or Argonaut and have just as good a CW QSK experience but I want to use a separate receiver.

Seems that at least one of the QRP CW transmitter kits would include QSK circuitry to TR and mute a receiver.

de ah6gi/4 I have the receivers, I just need the transmitters.

Don't pass by the transceiver projects. Most of them don't really share
anything between the transmitter and receiver sides, so there is no reason
you can't just build the transmit section and leave the receive section.

>The trick is QSK, built in TR switch, and receiver muting.

At these power levels, your QSK and TR switching can be done with a
single relay. You are not talking kilowatts here. Your key connects
to a multipole relay which disconnects the receiver and connects the
transmitter to the antenna, keys the transmitter, and supplies a muting
signal to the antenna. Any DP3T relay from the junkbox will work.

>Seems that at least one of the QRP CW transmitter kits would include
>QSK circuitry to TR and mute a receiver.

There is no circuitry needed. It's just a relay for God's sake.

Guys, there's this thing you may have heard of called 'democracy'. It's
a flawed system of government which assumes the majority is right.

This is the government you run under. This is the government that
elected George Bush. This is the government that elected Kennedy, this
is the government that elected Nixon, Clinton, and Roosevelt. Like it or
not, there is nothing you can do about it. The system works. You have
the President that most of you wanted.

This is why websites like 'sorryeverbody' really piss me off, what are
they apologising for? Are they apologising that the system works? That
the President who had the majority of the vote was elected?

The election is over. If you want your view to be heard, quit your
whining, quit your apologising, quit your tiny blogs that few read.
Write a letter, go on a march, and in four years time, vote.

gets off his soapbox

Well, I should explain a bit more. I've operated a Tentec Triton
IV and own a Signal/One CX7A. The Trition IV is good, the CX7A is
almost good enough. I'd like to have QSK not just automatic TR with
a relay clacking away.

I also have an ICOM IC-720A and it is too slow to be called QSK.

Seems that at least one of fun things of CW is QSK.

de ah6gi/4 I got a pointer to the 2004 handbook for an add on QSK system.

Well you have me at a disadvantage, like I said, haven't spoken to
Irb in over 25 years. Perhaps the normal aging process is beginning
to cloud Irb's thinking? Looking back almost 50 yrs ago, I can tell
you from personal experience that Irb and his late dad, W2GZJ,
were classic amateur radio operators and gentlemen of fine
character, as well as men of rare intellect. Both men were always
more than willing to "elmer" in new operators to the hobby. Irb
owned a 2-way radio & TV repair business and put in long hours
of honest work, sometimes seven days a week. Both men were
also Libertarians, and I strongly suspect this has upset many
bureaucrats along the way. Irb and his dad were red, white, and
blue patriots and loved America and our way of life. I understand
Irb had property stolen from him by the government, under the
corrupt and illegal concept of "eminent domain." I would say with
all certainty that was bureaucratic revenge for Irb and his dad exposing
bureaucratic corruption in high places. That is why I am skeptical
now, but as I said, perhaps the circumstances do in fact warrant
the warning letter.

Sorry, we don't run under a democracy. If we did, Al Gore would have
been president. The USA is a *Republic*, not a democracy. Our Constitution
protects us from the tyranny of the majority. We don't have to drink
hemlock simply because the majority wants us to. (Socrates drank Hemlock
and died because the majority voted for it.)

6158. Re: QRP transmitter for Boatanchor receivers?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-16 06:27:16 UTC
From: Edward Knobloch <alias@nowhere.net>
Message-ID: <8V9wd.1100$JA4.397@trndny09>
Source record: 20518

You really don't need receiver muting for c.w. QSK,
just a receiver who's AGC can be turned off, or is very fast.

I ran QSK with a crummy Lafayette HE-80 receiver,
a B&W model 380 electronic TR switch, and a Heath Apache transmitter,
all sharing a dipole. No keying relays used at all.
If I zero-beated a station, I could just
monitor my sending with my own receiver. For split frequencies,
turn up the volume on the keying monitor.

The point of the electronic TR switch is that it acts as a preamp
for the receiver, until you transmit. Then, the tube in the TR switch
is cut off due to its high value grid leak resistor, which protects
the receiver's input stage. The signal is still loud, but if you
switch the AGC off, you can hear a breaking station between dits.

If your transmitter final is biased off during key up,
you won't hear the white noise in the receiver. If your transmitter
uses an AB1 or AB2 final for c.w., you may need
to increase the final stage bias a bit in c.w. mode,
to lower the quiescent plate current.

If white noise is still present, you can use a separate antenna
for the receiver/TR switch combination. Don't forget to use
a coax low pass filter between the electronic TR switch
and the antenna, or you will generate TV interference.

I put together a Drake station a couple of years ago - R4B, T4-XB, and AC4. I got them all via eBay over a period of ~ 3 months. The AC4 cost me $65 (not in a speaker housing).

Those power supplies get listed on eBay a couple of times a month; but...caveat emptor.

I'm going to check out that Heathkit link anyway, because I have some more tube gear that needs similar capability.

Sorry Brian, but you were reaching for "armature".

Simon's use of "Amature" may seem like a simple lack of spelling ability (or an indication he can't figure out how to turn on his spill chucker), but he has coined a new word that really works.

Taking the root of "Amature" to be "Mature", we all understand that meaning. Adding the "A" prefix is adding a negative conditional (just as "typical" becomes negated in "atypical"). Thus, "Amature" would be the term for "not mature". It really works!

Quoting from the Vectronics VEC-1220K 20M transmitter kit manual, page 26: "Receiver Hook-up: You may patch most receivers directly into your VEC QRP-CW Transmitter's receiver jack without risk of damage. Transmitter output is typically around + 32 dBm and the energy reaching your receiver through the T/R switch is normally 25 dB lower, or about +7 dBm. This is a very strong signal, but a high-quality receiver with a wide AGC range can usually handle it without blasting out the speaker! If you are able to leave the receiver on during transmit, you'll enjoy the benefit of full QSK operation."

"This means you'll be able to monitor incoming signals--and listen to your own outgoing signal--simultaneously. If your receiver has an attenuator switch, turning it on will help reduce the effects of overload. By the same token, if your receiver has a pre-amplifier, you should turn it off. Receivers unable to limit speaker or headphone volume over a wide range of signal inputs must be turned down or switched to standby mode while you send."

Enough said?

not enough but thanks for the terrific info. I've heard a Triton IV and Signal/One CX7A's concept of QSK and that's not exactly their concept.

40 years ago, I put a pot in series with the mute line on my SX-101A. That gave me an RF gain control that worked on receive and let me monitor my signal on SSB and CW.

I didn't have break-in but I had the monitoring part. The QSK experience isn't just, "If I ignore the thumping of the receiver, clacking of relays, and the excessively loud transmit sidetone, I can maybe make out a dit between sent characters."

QSK is the change-over happening so smoothly that it sounds like we're transmitting using code practice oscillators in the same room and I can control the volume and tone on both oscillators.

Where you helped is this, I can combine that transmitter with the boatanchor TR-keyer described in the 2004 handbook and sold by www.radioadv.com to make a device that will mute my boatanchor receivers.

Should work. Thanks.

Thanks. I'd prefer to something more like Tentec's concept of QSK
and not listen to a thumping receiver or hammer my S-meter against
the pin.

Done right, QSK is a delight.

I think it can be done with off-the-shelf pieces. Looks like the
key is the www.radioadv.com keyer-TR switch and just about any QRP
transmitter kit, or at least that's what folk are telling me.

I fully agree with you that, done right, QSK is a delight. I have been using a Heathkit HR-1680/HX-1681 combination for over 20 years now. The QSK works extremely well. It is virtually imperceptible that the receiver is actually being shut down during my dots and dashes. There is no thumping or bumping or hammering of the S-Meter, and I can hear all of the band activity.

IMHO, I think that to have a good QSK setup, you must take the capabilities of both the receiver and transmitter into account. This Heathkit pair was designed to work together. There is a keying circuit inside that controls the timing of the receiver muting, transmitter keying, and T/R switch operation. No relays are involved at all. The low level keying and frequency generation is all solid state and the final (tubes) is run Class AB2, for a nice clean, well shaped, signal.

It may be beneficial to get a copy of the HX-1681 transmitter and investigate how they implemented it. I haven't looked at the schematic in a long time but I don't think it was very complicated. It may be similar to Tentec's concept of QSK.

I also seem to remember that in the ARRL Handbook, 2000 I think,
there was a project for making implementing automatic T/R switching
for vintage transmitters and receivers. I don't remember if they went
into full QSK, or not, but it's another possible resource.

It would strike me that if you really wanted a full T/R switch, and you did not want to spend the five dollars or so for a fast relay, you could probably build an acceptable switch using 1N4007 diodes. I would think that with these current levels at HF that there would be no need for a fancy switching PIN diode.

Another alternative, by the way, is just to use a vertical for transmitting and a horizontal dipole for receive. This also has some major benefits in that your receiver noise will be lower with the horizontal and your transmitted signal will be slightly better with the vertical.

I am looking for the following Cushman Plugins:

302 - Deviation Meter
306E - 400-520 MHz Prescaler
314 - High Sens Broadband Mixer
315C - 40-90 MHz Prescaler

Manuals for the above plugins are not essential, but highly desired.

I am also interested in purchasing a manual for the 317 AM/FM/SSB
monitor plugin.

Thanks,
Mike Harmon, WB0LDJ

I'll admit it's not done very well in the stock Vectronics units.
Using the 20m companion receiver, it's more like an AK47 in the
headphones! Good thing they don't come with an S-meter! Hey, I paid
$19 for a 30m model when TechAmerica had their closeout in
Atlanta...minimal expectations. They are good for experimentation.
I'm working on a solution for that QSK action, something better than
the 1N914 they use.

Good luck,

Ted KX4OM

6170. Boatanchor TR Switching

Message-ID: <cgj3s0llk8uuio628kngkosoc33c7m5gh0@4ax.com>
Source record: 20530

The 2003 ARRL Handbook shows a design by NC6A for sequenced switching of a transverter. I have an HT-40 and SX-140 with manual Standby/Transmit control by one from the other. Looks like the NC6A circuit (Chapter 22) should work for variable hang-time pseudo-QSK keying.

Comments?

I just posted a Boatanchor switching topic regarding a circuit in the 2003 Handbook based on sequenced switching for transverters. Is this the same article, or is there a separate TR article (I had borrowed the book from the library)?

From: Mark Oppat <moppat@comcast.NOSPAMnet>
Message-ID: <GvSdnfTd-rm4SVzcRVn-iA@comcast.com>
Source record: 20532

I have a bunch of 800 series tubes for sale...

802, 807, 811, 812, 815, 826, and others as well as many minature types
like:
927, 934, 5583, 5642, 5651, 5654, 5696, 5725, 5726, 5751, 5755, 5763, 5814,
5823,
and some others.

please email me now with your want lists.
I will make good deals on quantity.

I restore antique consumer radios (Philco, Zenith, RCA, Detrola, Fada,
Grundig, etc) in the Detroit area. I am always buying antique radio knobs
in quantity. Could use a few more 6E5, 6G5/U5 eye tubes and a few more
German radio tubes like 6AK8, 6AJ8, EM80, etc.

thanks and happy holidays to all.

Hi Scott,
The existing circuit simply uses one 1N4007 and a 1N4148 in series
thru a .01 cap to the receiver muting input (it is not THAT simple,
they are across the emitter and collector of the keying transistor; I
tried to draw it in text symbols, but gave up). What I hear in the
phones on keying is a loud "square wave" thump on each character sent.

I bought the Vectronics kits a couple of years ago after a period of
inactivity due to illness, mainly to get engaged and productive on
something.

I'll check out some designs in my 2000 and earlier Handbooks for relay
and/or diode switching better than the current Vectronics QSK design.
I can in fact use a vertical and a dipole, so that is a good
suggestion. Meanwhile, I enjoy QSK with my SW-20+.

Thanks,

Ted KX4OM

Try putting a capacitive shunt on the line that is providing the bias
supply to the diodes, so they take a little bit of time to get up to
voltage and back down. That may slow the action up a little bit, but
it will also reduce the clicking. You may have to fiddle around with
values (and you may need a combination of a ceramic and an electrolytic
in parallel), but if the noise is caused by the rapid switching, it will
fix it.

If the noise is caused by DC offset on the output, a .1 uF ceramic in
series with the receiver input will clean that up. This might be the
case in receivers where there is a DC path through a coil winding from
antenna to ground.

After working at a military installation where the procedure was to disconnect
the UHF connector from the receiver and plug it into the transmitter between
sending and receiving, I am just glad to have anything at all.

I'm hoping that www.radioadv.com version of the Handbook TR-Keyer
will supply that level of control.

I'm not in a rush to get this going. I'm mostly a listener and
haven't been on HF for decades. I have a TH3jr and a 204BA (with
35 foot boom) both disassembled. I've been refurbing receivers.
While I work on them, I'll listen to 40 CW or one of those 75 meter
nets.

I like to listen a couple times a month to keep my copying speed up.

The more I hear about that handbook/radioadv TR-keyer, the more
exciting it sounds. If it'll give me good QSK like a Triton IV or
your HR-1680/HX-1681, it'll be well worth it.

de ah6gi/4 qsy to 80 to listen for the QRP sprint.

Hi..
I have a DX-100 that has no grid current.
The meter readings show '0 for grid.
'110' volts for Plate
'740' for Volts.
These readings are also when I depress the morse key..no change.
I checked the key and the connections are correct.
The transmitter was working perfectly before a move about 4 months ago.
Any suggestions appreciated...John

Hi, John

Can you hear the VFO being keyed in your receiver?
Have you worked the band switch back and forth
(with High Voltage off)? Any loose tube, or tube
with no heater glow? Have you a crystal you can try,
instead of the VFO? What is the plate current,
key up and key down?

I think you'll have to bite the bullet,
and remove the rig from the cabinet for an inspection,
if these quick checks are unsuccessful.

I copy ya, man.

That's a good reason for me to stay persistant and get the best, smoothest, real QSK system possible. This stuff about "two antennas" and let the AGC handle it, isn't right. I'd be trying to hear an S7 signal through my own S9+40 signal hammering away.

I mentioned putting a pot in the mute line of my old SX-101A. That worked great.

I was using a dowkey relay but that let me turn down the receiver gain on transmit. The only problem with that was I was using an HT-37 with the automatic changeover mod. It, and the dowkey relay were too slow for QSK.

I know what I want. I've heard it on a Triton IV. Others have described their Heathkit twins with QSK done right. Signal/One is pretty good too.

At 57 my hearing is not what it used to be. I'm not on hearing aids yet so I'm trying to keep every bit of that's left.

I've been mulling over my speaker system. I use cheap hi-fi speakers with the tweeters disabled. I'm going for smooth, clean, rich sound.

I'll give the www.radioadv.com bk175 kit a try. The write up on the site sounds like it does what I want. I hope it'll all fit in the case I have.

de ah6gi/4 boatanchor qsk here I come.

6188. Getting an "ARC-5 " Transmitter Running- Preparing The Transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-17 21:17:54 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <41C34CB9.2030606@ix.netcom.com>
Source record: 20448

(per request)
The only "modifications" needed to a Command transmitter
are simple and 100% restorable.

1. Replace the three capacitors in the bathtub on the back.
Even if you think they're good, they're bad. Trust me on this.
Leakage in this bathtub cap causes big headaches,
and if it isn't leaking now, it will be.
Here's an easy way:
Unsolder the leads of the bathtub cap, leaving the wires intact.
Make sure multiple wires stay connected to each other, just not the cap.
Coat them with insulation. "Liquid Tape" by GC is good and available
at most electronics parts places, or just use tubing.
Leave the wires where they are as their distributed capacitance
is part of the design.
Get some of those little mylar .047s from the parts house.
They're about the size of a pencil eraser. Trace the wires from
the bathtub to where they connect, then solder the cap between
there and the nearest ground.

2. Unsolder one lead from the antenna relay. Roll the spring
contact from the loading coil around so it's always in contact.
Either put some Cramolyn on this contact or polish it as
detailed below.

3. Check the selector relay and make sure that the osc. B+
contact (the "short" one, nearest the coil)
makes before the 1625 cathode contact. Carefully bend
them to make sure. You key the rig with this relay
through it's contact on the back plug-it's called the "selector."
Put a "spike killer" diode across the relay coil winding
(anode to positive voltage lead) to keep the inductive
kick off the filaments and keying leads.

That's it. All the hole drilling and output hacking and
"de-TVIing" of the 50s and 60s was completely unwarranted.

If you want to make it easy to tune and remove
a source of possible "chirp," the next steps are
some work, but well worth the effort-

All the roller coil assembly metal parts (less screws)
are plated in silver. This gets oxidized (that black stuff).
When you're loading the rig, you'll notice "intermittent" power
out as you roll over the gunk. If your loading point is
cruddy with this black stuff, it will heat when you key

and change the loading enough to introduce some chirp
(yes, believe it or not).

Go to Wally World and get some cream silver polish.
Don't waste your money on the "dip" stuff.
Put a towel or other "parts catcher" on your bench.
Completely disassemble the roller coil unit.
Pay close attention so you can get it back together
in the right order.
The leaf-spring contact on the coil axle (ceramic support end)
needs to go back right-side-up, so you might want to mark it
or just notice how it goes back in.
Use a linen or other lint-free cloth to polish the coil,
roller bar, roller, axle leaf spring contact etc.
Use a "Q" tip to polish the inside of the roller wheel as well.
Once all the crud is polished away, rinse off all the polish
with clean water and allow the parts to completely dry-
especially the coil. Don't want water under the turns.

As you reassemble, lubricate the thumb-wheel end and thumb-wheel
axles with petroleum jelly or graphite. Do not lube the
ceramic-to-coil joint, but do lubricate the roller coil axle and
leaf-spring contact with paste Cramolyn or other
good contact lube. Be careful not to overtighten the screws
that are threaded into the ceramic.
Just finger-tight them and lock them in place with some
paint or fingernail polish. Seal the roller-bar screws
with paint as well. Now enjoy easy tuning.

On "chirp-" This is a classic MOPA rig. While you can expect
some small amount of chirp, I've got many transmitters in which
it is difficult to hear any at all. I've never had one that,
after I finished restoring it, had what I call "bad" chirp.
Noticeable chirp in an "ARC-5" transmitter
can usually be traced to a few sources.
Here they are in order of their usual appearance:

1. Poor power supply regulation.
Your supply needs guts enough to maintain 500-600 VDC at 200 mils
and 24 VDC at about 2.5 amps.
(if you don't want to use DC on the fils, put a diode and
filter cap at the relay)

2. Leaky bathtub caps. Reduces osc. drive, messes with
Osc B+, reduces grid bias to the 1625s. See above.

3. Cruddy output tuning network or antenna connections.
Anything that changes the loading- like heating the crud
between the roller and coil-
is going to pull the freq of an MOPA rig.

3. Low under-load emission in the 1626 Osc.
Swap it out with a known-good one.

4. Grid emission in one or both 1625s. Especially
noticeable in one that's been run at 800+ volts.
Swap with known good ones.

I've seen changed resistor values in the osc. stage
and misc. other stuff, but these four are the usual bandits.
While I've heard of the other mica caps going bad, I've
worked on many dozens and never seen it happen. I've
also never seen that custom "button" cap in the MO stage go bad.

I hope this will help out.
Next post for the power supply.

6189. " ARC-5 " Transmitter Antenna Matching.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-17 21:18:51 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <41C34CF3.6090004@ix.netcom.com>
Source record: 20449

(per request)

On Loading an Antenna:

The SCR-274N and AN/ARC-5 radios were not designed
to load a 50 ohm antenna. They were intended for
antennas of about 5-12 ohms. In order to load
a 50-ohmer you'll need to do one of two things:

Cheap and easy- put a good quality NP0 (no thermal drift)
capacitor of at least 1000 volts between the antenna terminal
and the coax center conductor (in series).
For 40 meters, use 50 PF. For 80 meters, use 75 PF.
Non-NP0 caps may heat, drift and cause chirp.

More trouble but better:
Wind a 4:1 "UNUN," which is an unbalanced to unbalanced balun,
and use it at the antenna connector to match the coax.
The design is available in the Handbook.
Will cost a couple of watts but worth it.

I hope these tips will be of value to you.

Good Luck with it!

73 DE Dave Stinson AB5S
arc5@ix.netcom.com

6190. " ARC-5" Transmitter Power Supply.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-17 21:25:25 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <41C34E7C.409@ix.netcom.com>
Source record: 20450

(per request)

On an ARC-5 Power Supply:

First- there are three "flavors" of transmitters commonly
lumped under the name "ARC-5"
The first is the Navy ATA, second is the Army SCR-274N
and last is the Navy AN/ARC-5.
The rear connectors and wiring for the ATA and SCR-274N
rigs are identical. The AN/ARC-5 connector is
physically different and the wiring is also somewhat different.
If your transmitter is black wrinkle painted and
has a big RF choke next to the tank coil, it's
AN/ARC-5. If it's black and has not such coil,
but has an anchor in yellow paint on the back skirt,
it's an ATA. If it's silver, it's a later SCR-274N.
If it's black, has no RF Choke and has a "BC-4xx"
number on the back skirt, it's SCR-274N.

Transmitter Plug Pin-out:
(Note: If yours has an octal socket or anything
other then the 7-pin Mica connector,
then it's a modification and all bets are off.)

For AN/ARC-5-
There are seven pins. The pin in the center is
pin #7. Locate the pin that is grounded
to the chassis. This is pin #4.
Count the others *clockwise* around accordingly.

1. No Connection
2. +200VDC for the Osc. (needs to be right for stability).
3. Keying Relay (ground to key).
4. Ground.
5. A+ 24-28 VDC.
6. PA Screen Voltage (use 20K 5W dropping res. from B+).
7. PA Plate B+ Voltage +550VDC

For ATA/ARA and SCR-274N:
There are seven pins.
The pin in the center is pin #7.
Locate the pin that is grounded
to the chassis. This is pin #1.
Count the others *clockwise* around accordingly.

1. Ground
2. Test point for PA grid current.
3. +200VDC for the Osc. (needs to be right for stability).
4. PA Screen Voltage (use 20K 5W dropping res. from B+).
5. Keying Relay (ground to key).
6. A+ 24 VDC.
7. PA Plate B+ Voltage +550VDC.

The best way to get power to the rig is the way the
original engineers intended. I don't mean a dynamotor-
I mean a good, solid 550 VDC source and a divider.
Both the AN/ARC-5 and SCR-274N units derive their voltages
using a voltage divider network. We'll draw a divider that
matches the one used in the original power supply.
I very much recommend it.

Primary power should be 24-28 VDC at about 2.5 amps for relay
and filiments and B+ of 500-600 VDC at about 200 MA.
We will assume the designer's specs of
550 VDC B+ and 26 VDC filiment.
Get a pencil and a piece of paper. Follow along:

Place a dot on your paper and call that point "A".

Draw a line right to point "B".
From point "B", draw a line down and

connect a 20 K-ohm, 5 watt resistor here.
Call the other end of this resistor point "C".

Draw a line right from point "B" to point "D".

From "D", draw a line downward
and connect a 15 K-ohm, 10 watt resistor.
Call the other end of this resistor point "E".

>From point "E", connect a 100 K-ohm 1 watt resistor to ground.

Draw a line right from point "D" to point "F".
Draw a line right from point "E" to point "H".

+550 VDC in at point "A".
+550 VDC out to PA plates at point "F".
+270 VDC out to PA screens at point "C".
+200 VDC out to Oscillator at point "H".

Bypass all outputs with about .01 ufd to ground.

If you wish to regulate the screens for AM,
connect an 0D3 VR tube with a .5 ufd at 300VDC
cap across it between point "C" and ground.
This will bring the screen down to 150 volts.

If you use this network, and use correct antenna
matching, you will be able to properly load and

tune your command set transmitter to rated output.

Voltages lower then 550 VDC will work just fine
with the same network. Voltages much higher will
cause MO drift and increase chirp.

GL OM DE Dave AB5S

>than I have at this point.

There's lots of info on the web, but your best resource is AB5S, who is right
here.

>For example the unmodified unit has an RF choke
>next to

>the large vertical coil in from of the 1625s, on the modified unit, it looks
>like
>it never had this rf choke installed.

Some units had the RFC, some didn't. I think it may have had to do with whether they were meant to be plate-modulated or not.

>There are little wiring differences
>like
>this in these two units which I do not understand. The vertical coil in the
>unmodified unit has the red number 9295 printing on its edge, the modified
>unit
>has the number 7250 on it. I do not know what this number means (?).

It's the part number.

>What (where would I get) information would I need to rebuild a totally
>modified
>unit, to make it into some kind of an operating transmitter?

There are many mod articles, but I really can't recommend any of them.

>> >The Xtal in this unit is 8870 KC. Is this OK?
>>
>> Not for ham operation!

>The way I understand it, this is just for calibration of the VFO, so it is
>OK.

Yes.

>My original intention was to recreate a 50's style conversion of one of these
>transmitters, however, I am not wondering if there is not a better way to go.

If you want to try a '50s style conversion, I recommend doing it to the one that's modified already.

Hi to all,
I need some clarification on how to build correct power supply for an
Atalanta receiver (2207C model) I have found on a flea market.
I have schematics but some parts (thermistor) does not match with electrical
diagram, anybody in ba land has the service manual?
Thank you very much in advance.
Claudio

6203. Vacuum tube characteristics

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-19 16:03:27 UTC
From: oceanradio@aol.com
Message-ID: <20041219110327.08318.00002471@mb-m04.aol.com>
Source record: 20463

There was a URL I used a few years ago to find vacuum tube characteristics, but I've lost it and can't find it using the normal search processes. This site was great; you could copy the actual tube characteristics curves for any tube I could think of.
Does anyone know that it still exists and its URL?

Here's the one I use most often. There are links at the bottom of the
page after you do a search that will take you to other sites so you
don't have to search each site individually. Handy.

From: Frank Krozel <frank@electronicinstrument.com>
Message-ID: <D4WdnUDeOe6MSIvcRVn-rA@comcast.com>
Source record: 20477

This is my last one..
It was in very good electrical / mechanical condition when I put it away a year ago.
Additionally it has the AC Console as well. Would also come with a Shure hand mic wired to work with this system.
I am sure I have the original manual with it but I did not pack it with the radio, so I would need to find. Also a CD with all the information that I have found on this radio on the internet over the years..
Yesterday, as I usually do, I unpacked it to use as background while wrapping presents...
The receive is out!
I just don't have the time to fix this...
$200 shipped.
Would come with all my Atlas extras... I have bracket, mobile matcher (I think I have two)
And any other basement "scrapings" that I can find.
I am done with Atlas radios..
Best Regards, Frank

> WB2WHC

Mark, most dispatch centers have radio systems consisting of muliple receivers that are scattered throughout a geographical area, referred to as "voting receivers".. These copy the "inbound" traffic from the field units, and route the traffic to the communications center where the dispatcher is located .. These receivers are connected to a comparator unit that selects the best quality audio from the best receiver and routes it to the dispatcher. The comparator looks simultaneously at all of the receivers on a specific channel in order to "vote" which is the best quality to hand off to the dispatcher..

When the dispatcher transmitts, their PTT is sent to the base transmitter.. At our agency, when the dispatcher transmits, the inbound traffic (if any)can still be copied by the dispatcher. The allows a police or fire unit to be able to be heard, and provide additional

information to the dispatcher, even if the dispatcher is transmitting..

Such a system is usually referred to as full duplex. For our police radio systems, they are like many UHF amateur repeaters in that the field unit transmitts on a frequency 5 MHz higher than the base station transmitter does.. Full duplex allows the field unit to interrupt the dispatcher if they have something important to pass to them..

Hope this helps a little ..

Patricia Gibbons - wa6ube
Communications Services Manager
City of San Jose ITD/Radio Program.

6231. 6L6 single tube transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-21 21:29:17 UTC
From: zeno <zeno@sonic.net>
Message-ID: <41C895A1.87212114@sonic.net>
Source record: 20492

I came across a cute little homebrew CW transmitter utilizing only a single 6L6. Mostly made from radio and audio junkbox parts, it does seem to work. I put it on the air briefly with its 40 meter Xtal and monitored the signal on another antenna. Sounds kind of chirpy, actually worse than chirpy. Needs some kind of work or upgrade or correction. I did some web searching but could not actually come up with a schematic for this rig, probably out of some old magazine or something. I do not quite understand how it works without a power supply rectifier. There is nothing under the hood which looks like a diode or selenium rectifier. Anyone have a clue as to this circuit. I am kind of new to this. How might I proceed to make this little rig into a useable QRP unit. I think it probably makes something under 10 watts, and the cw sounds goofy, wimpy, and wobbly. It is someone's old nice lay out failure, but it would be a fun challenge to convert it into something useful. Anyone seen a circuit for a singl 6L6 rig?...who knows maybe it has the wrong tube in there. Hmmmm....how to do the detective work on this????

I have a certain nostalgia for simple one tube rigs, when I was a novice in the early 50s as a kid I built this crazy rig with a single 117N7 that worked great with my very compromised end-fed random wire. I have recently found the schematic for that one, but it seems kind of crazy to build that one again, but who knows....the schematic for the 117N7 rig can be found on page 38 of "Radio For The Millions", 1945 Popular Science Publishing Co. Inc. This illustration has the chassis plugged into the AC neutral/gound side. Another variation appears on page 105 in "Ham Radio Projects" 1968 by Bert Simon, a circuit which looks even more scarry since you only plug into the hot leg of the AC outlet, and then ground the chassis to earth ground. I do not know how I lived to tell you now that it was my first rig!

There is a one-tube rig on page 99 of "Ham Projects..." which uses a 6AV5 but that is not
the circuit I see in this unkown 6L6 rig. Let me know if you know of a source for this single 6L6 transmitter. Nothing in either of the books mentioned has one like this.

Other clues: it has three rf (air core) chokes, no other iron core choke, uses two variable condensers, keys thru one of these chokes to pin 8. Another choke goes from the antenna center pin to the chassis ground. The 3 rf chokes used appear to be identical.

Bill -

I seem to remember the ARRL Handbooks having a 6L6 based circuit.

Have you searched for the MEISSNER NOVICE TRANSMITTER ? I think it used a
6L6 oscillator

Have you seem the Ameco AC-1 web pages?
http://www.qsl.net/wb1gfh/ameco.html

If you solid state the rectifier, then its also one-tube !

No, but you can do this.

1. The wire with the shield around it will be the Audio hot lead. Hook it to the pin that hooks up to the speech amp input.
A. You find that by eyeball or finger poke.

B. Eyeball is safer. It will have a 100K or so resistor in series to the grid of the 1st tube used for the speech amp. Probabably somethink like a 12ax7.

C. Or turn the mess on. Listen in another receiver and get it to make a signal while in the AM mode of course. Then put your finger on the pins of the female mike connector to determine which one hums. Thats the audio input line. Course you may get a shock if you touch the PTT line. But it won't be that bad.

Then the other connection will be the PTT line. Confirm that by putting a clip lead on it to ground. It should key the TX.

On the D-104 mike there are lots of possibilities. Just take a ohm meter and find the one going to ground when you close the slide on the mic. Bear in mind you will probably have to connect the shield of the audio line to system ground which will then key the rig.

I just did a Google.com search for: "6L6 transmitter" and I same up with
several links and schematics. From notes, it appears several designs were
published pre-WW2 in QST.
RCA introduced the 6L6 tube in early 1936 as an audio power tube.

Are you looking at a Stancor 25-B transmitter, photo in article here:
http://www.io.com/~nielw/6l6/6L6.htm

W0VLZ built the Stancor 10P, which is listed in the 1940, 5th edition of the
Stancor Hamanual
http://www.io.com/~nielw/2tube_xmtr/2tube_xmtr.htm

K4GC homebuilt 6L6
http://www.qsl.net/k4gc/6L6.html

K5DH 40 meter version built from design in "104 Ham Radio Projects for
Novice and Technician"; TAB Books, 1968
http://www.qsl.net/k5dh/6ag7_6l6.html

October 2004 issue of CQ magazine featured a 6L6 transmitter (with a
correction in the December 2004 issue under "World of Ideas")

LA6NCA Norwegian homebrew
http://www.laud.no/la6nca/homebrew/

Thanks for the links. What is unusual about the transmitter in question is that it has one tube total, no rectifier, no apparent power supply section besides the power transformer and an electrolytic can. No chokes other than the 3 rf air wound chokes. It came with a 6L6, I cannot be sure that is what it calls for, but it did work, although with "wobbly" goofy signal. I have not come across a design with only one 6L6 total although I have heard that such things exist. I did the same google search you did when I first got this thing.

Maybe yours was the mystery circuit. Did yours have only one 6L6 and nothing else, I mean no power supply rectifier? This rig does not even have a diode or selenium under the hood, how can they do that? Do I have AC for the B+? I am not an EE. What am I missing here? What mysteries lurk in the 6L6 that we mortals do not fathom? Beam me up.

There are two schools of thought on boatanchors. I'm in the fix it and use it school. For me, fixing is the larger part of the fun.

I do a cosmetic clean up. Mostly mild soap and water using a damp rag. Then I fire up the radio and try to figure out what's wrong with it, if anything.

I've found bad electrolytics and way out of spec carbon resistors.

I've found dirty contacts in switches, pots, relays, and that spring that contacts the moving part of a variable capacitor. The product De-Ox-Id by CAIG cleans those up like magic.

I get the radio looking and working as best I can. I have a shelf of projects.

There is another school of thought. These are like collectors of antiques. You're not supposed to clean or restore a real antique. The real fanatics prize the patina of age (dirt) on furniture or whatever.

Radios owned by these folk are called "shelf queens". They are not repaired except with original parts. Since you can't find a 70 year old capacitor that works, these radios don't work. They sit on the shelf and are display-only.

As for the value of a Viking II, go to www.aade.com. Neil maintains a price list of boatanchors. Take Neil's price and double it. That'd be my guess.

I have another view of antique radios. I believe that the prices are yet to be realized.

I saw a "catalin" table radio sell on eBay for over $20,000. These are plastic AM table radios in weird colors. Apparently collectors, whoever they are, are collecting these, for whatever

reason.

Watch the Antique Roadshow. Weird, screwy stuff is priced at incredible numbers. Ugly furniture, carvings, ceramics, paintings, books, most things I'd say, "what would I do with that?" Incredible numbers like $10,000, $25,000, $80,000.

Then I look at my Signal/One CX7A, one of less that 1,000. Incredible engineering, Nixie tubes.

I think that in the near future, boatanchor radios will be highly prized collectables. It might not happen for 20 years, it might be starting now.

I hate to say it but the people who are preserving "shelf queens" will probably see the highest valuations.

I'm definitely not in that school.

My goal is to have a working radio where the exterior looks like new. If I have to install new capacitors and resistors, that's just a part of maintenance.

If you can get your Viking II working and clean it up so that it looks like new, it will only increase in value.

Given the renewed interest in AM and CW, I'd say you have a valuable radio there.

Really?? His prices are based on what
things sold for on eBay. I've never
considered eBay prices to be low, or
even typical.

Have you been getting twice eBay prices
for all the things you've been selling?
I may need to recalibrate - I may be rich ;-)

Bill,
It sounds like you've been around awhile and have built some stuff in the past.
Surely you can look at the circuit and figure out what is powering the thing. Put your
meter into that thing and start measuring voltages (from the line cord, through the transformer and on...)
Of course, if you find "any" DC - you've got a diode someplace. Take some paper and draw out the schematic (can't be to hard for one tube circuit). That
will show you what you have. Check the tube base wiring against the 6L6 and see if everything
goes to the correct pins for such a tube. It's possible you should have a tube which sports a rectifier (diode section) and another tube in the same envelope). At any rate - a part by part inspection resulting in a schematic will tell all!
It's rather elementary. I'd be interested to hear what you find.
Good luck,
Roger, KL7Q

Use a big grain of salt with what you see on the Antique Roadshow.

They have been know to appaise modern, sub $100 replicas at tens of
thousands of dollars among other things; it is TV.

Investment vehicle. The guy who pays 20 grand will be selling it for 30 in the not too distant future. Most catalin sets have a lot of frequent flyer miles since they change hands so much.

I thought of that myself. While this transmitter is so simple it has
to be pretty generic, so there doesn't have to be an article about it, I
have seen "single tube" transmitters described in old magazines that
used something intended for AC/DC use, ie a power stage with a built in
rectifier that used a high filament voltage. I'm thinking 50L6, but I'm
not sure if that is right. I don't remember if there was something in an
octal package that ran off 117volts directly.

I don't think the original poster mentioned if there was a transformer, and
somehow I suspect the lack of one would be a greater indicator of this route.

Of course, selenium recitifiers may have had a brief enough life that
someone might not recognize one by sight.

The 117L7 has a built-in diode section. Here's an xmtr made with one.

Michael,
Well - he said (in a subsequent post) that it had a transformer and electrolytic. I surmise from that he has DC running around somewhere since it apparently generates a signal. All one would need to do is trace the voltage from the secondary to the elusive rectifier. Or one should find DC across the electrolytic and be able to trace back towards the transformer from there.
I'm sure he'll figure it out. If he has DC - he has a rectifier hidden someplace. If he doesn't - it can't work (as he says).

The transmitter can work without a separate rectifier. I recall a circuit from the 30's in which the transmitter tube is used also as the rectifier. I think it was in the RCA handbook. I sort of recall an 813 tube, but that may have been a bit early for the 813. Even in those days, it was not "state of the art".

Now, I will have to look for the circuit, but the oscillator tube can also serve as the rectifier. It complicates things a bit and is not in any of the Handbooks. Never have seen a 6L6 circuit configured that way, but it can be done and was done in the 30's in at least one circuit.

Neil's prices are what they sold for last year or the year before
or the year before that. What you can't see are the trends.

eBay's prices are the real prices. That's what you can get at any
time.

Hamfest prices and "private sales" are not a reference. For
example, I saw an HP23 sell for $25 at a local hamfest. HP23's go
for much more than that on eBay and you don't have to drive for two
hours and stand in the sun to sell it.

> Have you been getting twice eBay prices
> for all the things you've been selling?
> I may need to recalibrate - I may be rich ;-)

You are rich. Take a look at the Antique Roadshow some time. A lot
of weird, absolutely useless, junque at incredible prices.

And yes, I expect that if I ever sell my collection, I will get much
more than the current prices.

> 73, John - K6QQ

There're not that many boatanchors left in the world. The other
problem is that they are vanishing into private collections.

I am looking at "Practical Radio Telegraphy" dated 1928. The RCA P-8 transmitter is described with tube converter ET-3628.

This converter is a tube replacement for the "quenched and synchrnous gaps formerly located on the power panel". it runs 1.5 kw using 2 tubes. One of the problems mentioned is "fading or swinging signals", in which it is stated that "such difficulties may be encountered in the case of a heavy sea causing variation of the antenna capacity by the rolling of the vessel ..." it is mentioned that if, on occasion, one tube burns out and there is no replacement, the circuit may be operated as a half wave rectifier with just one tube. Even more interesting is what to do if both tubes fail and no spares are available: "the operator may connect his transmitter in plain-aerial style. This is accomplished by removing all of the connections from the three secondary terminals of the plate transformer and connecting the antenna to one outside terminal of this transformer, and the ground to the other. The safety gap shunted across the secondary terminals will then function as an oscillatory spark discharger."

DO NOT TRY THIS AT HOME. I PRESUME MORE THAN ONE SAILOR TRIED CLEANING BIRD POOP OFF THE TRANSMITTING AERIAL AND BECAME WELDED TO THE DECK WITH THIS SYSTEM.

Using a Poulsen Tikker form of detection, this transmitter may not have sounded that much different from those that had dc on the plates.

Colin,
That's really interesting. I was not aware that could be done. However, I would
think that the chances that the 6L6 circuit was configured to work in that fashion
are slim at best (but then one never knows).
Thanks for the interesting information.

But who wants that stuff as opposed to, say, a 75A-4 or a Ranger II?

What about the multi thousand dollar giant wood chicken that was
featured on one show?

Let's see, wood chicken, Alpha 374. Chicken, 374? The fact that
an Alpha 374 goes for only $1,000 means that the our civilization
values a wood chicken more.

You're saying what they're doing but I still do not understand the
mania. Somewhere, is there someone who values those ugly catalin
radios? Why? Why does that end-user want it?

I can imagine a rack of, say, 5 Heathkit SB-220's. Contest station
look. At current eBay prices, that might be $3,000 for all five.

For $5,000, you could probably get 5 Alpha 374's.

Is a $20,000 catalin radio really worth more than 20 Alpha 374's?

I'm glad that collectors haven't discovered boatanchor radios yet.

Deep down in my memory banks, I recall seeing an OSS transmitter from WWII that used a similar circuit to avoid the failure of a rectifier tube, where the 6L6 was used as a rectifier also. It did make sense, since the rectifier tube was more fragile than the metal 6L6. Otherwise, it would make no sense, other than to confuse your buddy - like using a 6L6 for a rectifier and a 5U4 for the final output stage (sure it can be done).

I saw a Fada Catalin go for over $20,000 on the Bay. I have a nice
AM/FM radio with CD player and good speakers. I paid $19.95 for it
at Big Lots.

> >
> > I'm glad that collectors haven't discovered boatanchor radios yet.
>
> Watch what you say! There are a number of guys paying over the top to

I expect that BA's will get pricey. I'm surprised that most are
selling for less than their new price, de-inflation. I recently

bought a nice DX-60, the exact model I built as a novice in 1963. I paid about $70 for it. That's close to the kit price 44 years ago.

I suppose there aren't that many people who want DX-60's but I remember working JA's and VK's on the 15 meter novice band with it.

If boatanchor prices tracked inflation, this radio would be about $1,000. Figure, a coke used to be a dime, it's $2.50 in a restaurant now. A '63 vette was $4,000, maybe $5,000 with fuel injection and some options. What's a 2005 'vette? $50.000?

I still have the SX-101A that I used with the DX-60. I paid $200 for it, used. These are still going for about $200.

Based simply on inflation, these radios would go for 10X or 20X their original price. I'm not betting that they will but I am picking up a few interesting radios to refurb and to use.

Yes, the Catalin simple 4-tube-plus-rectifier radios are a sure sign of beauty over performance. But one thing to remember -- the Ctalin plastic is unstable, and over theyears, many of these sets discolor (the lovely yellow ones were once white), and worse yet, they crack!

Good news: every year Catalin sets without cracks are more rare, so yours is more valuable.

Bad news: unless yours cracked.

Same thing applies to pot metal, which most BAs have none of. BAs are not likely to break just sitting on yoru shelf -- or your operating table. --Mike K.

Huh? What junk? If there is outright junk appearing, then the original poster isn't reading the newsgroup at a newsserver that keeps out the outright junk (the make money fast, the sex ads, etc). I haven't seen any of that in years. Take note that even google keeps that junk out of the archive.

Of course, there can often be junk that isn't filtered out, like when people try to sell things that sure aren't boatanchors, and when people post political junk here. It won't be filtered because it's not spam in the sense that the same message hits a whole slew of newsgroups.

But I'd disagree on your interpretation of this newsgroup. The ads have pretty much always been more significant than the discussion. People wanted a boatanchors newsgroup, and needed their buying and selling fix so that was allowed, but then those same people who were so desirous of having a newsgroup that they went to the trouble of creating it rarely or never appeared. Discussion feeds discussion, but if much of the traffic is ads, that does not make for much discussion.

>There are two schools of thought on boatanchors. I'm in the fix
>it and use it school.

Me too. That doesn't mean I'll drill holes in an unmodified BA or make irreversible changes, though.
>
>There is another school of thought. These are like collectors of
>antiques. You're not supposed to clean or restore a real
>antique. The real fanatics prize the patina of age (dirt) on
>furniture or whatever.
>
>Radios owned by these folk are called "shelf queens". They are
>not repaired except with original parts. Since you can't find a
>70 year old capacitor that works, these radios don't work. They
>sit on the shelf and are display-only.

Yep. Sad, really, because a lot of fix-it-and-use-it work can be done so the radio still looks "vintage". For example, a lot of folks clean out the old electrolytics, put modern ones inside the old can and seal it up so that unless you look really closely you'll never know it was redone. Same for wax paper caps.
>
>I have another view of antique radios. I believe that the prices
>are yet to be realized.
>
>I saw a "catalin" table radio sell on eBay for over $20,000.
>These are plastic AM table radios in weird colors. Apparently
>collectors, whoever they are, are collecting these, for whatever
>reason.

There's a major difference between fixing up something old in order to use it, and collecting "real" antiques. The latter becomes more a matter of "art".

For example, look at how some old wines fetch incredible prices. In many cases, the bottles will never be opened - and, in fact, the wine inside is probably vinegar by now. What has happened is that it's no longer really about a beverage - it's about the bottle as a collectible, which means its price has nothing to do with its real worth.

>Watch the Antique Roadshow. Weird, screwy stuff is priced at
>incredible numbers. Ugly furniture, carvings, ceramics,
>paintings, books, most things I'd say, "what would I do with
>that?" Incredible numbers like $10,000, $25,000, $80,000.

That's because the experts know that someone out there will pay those prices. In many cases, rarity alone is the driving force. There's also age, condition,

and somewhere in there is the actual craftsmanship.

One of my favorite AR stories is the one where two ladies (sisters) brought in a nice table lamp with a Tiffany-type shade. They said a local antique dealer had said it wasn't a genuine Tiffany (because the base was metal, not wood), and was worth maybe $100.

The expert said it was indeed genuine, and was one of a very few made about 1904. Only about six examples were known to survive, and none were as good as the two ladies'.

They had been using it as a table lamp in the living room, and it had Kmart bulbs in it. Worked, too. They had brought it to the show in a cardboard box, in the back of the minivan.

Expert priced it at about $120,000. Their *house* wasn't worth $120,000.

>
>Then I look at my Signal/One CX7A, one of less that 1,000.
>Incredible engineering, Nixie tubes.
>
>I think that in the near future, boatanchor radios will be highly
>prized collectables. It might not happen for 20 years, it might
>be starting now.

I wouldn't count on it. Too far off the beaten path of the antique/collectible world. Then again, a few years ago, somebody paid $5100 for an unbuilt AT-1 kit. That's not a typo - five thousand one hundred US dollars.

>I hate to say it but the people who are preserving "shelf queens"
>will probably see the highest valuations.

Sad but true. Anyhting not "original" will devalue. Whether it actually works is immaterial.
>
>I'm definitely not in that school.

Nor I.

About 15 years back I came across a partially-built HW-101 kit (the builder had only done the VFO). Also an unbuilt HP-23. Like a dummy I bought the pair for $150 and built them. I don't want to know what the unbuilt kit would be worth today.

The WW 2 vintage Navy DZ-2 aircraft DF had a freq range of 15-70 Kc and 100-1750 Kc. What was the lower range used for? The loop had two windings, one for the 15-70 Kc range and the other for 100-1750. What was transmitting on the low band?

There were real CW transmissions down there back then...I think
primarily for submarines and 'worst case' conditions. I don't think any
of it was two-way communications.

Good luck finding one of those. I have been on the net for several years and only ever found them on ebay. Strangely enough, when I did have one for sale and posted it here on the N.G.'s it took a while for it to sell. Once you do find one, make sure that the accessory jack on the back of the set hasn't been altered to suit another purpose.
Good Luck!

I just know that Santa will bring me my Knight Star Roamer this year. Been waiting since 1967.

I can just smell the aroma of burning solder flux. I hope that Allied prestripped and tinned all the wires to their exact length. I can hardly wait to mount last component on the chassis and listen to stations through the thick 120 cycle hum of the half-wave power supply. I just know that if I do a real good alignment on the radio, the set will be sensitive up to 30MHz even though it has no RF amplifier. My code key is ready so I can practice Morse when I crank up the Sensitivity control so the IF starts oscillating.

If not a Star Roamer....maybe a Span Master will do.

Thanks Santa! I'll leave a couple of 807's for you on the table.

Today I received a GZ-34 tube for my Eico 723 TX . Maybe I can get my TX on
for Slow Key Night .
See radio at
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&rd=1&item=5735284021&ssPageName=STRK:MEWN:IT

See tube at
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&rd=1&item=5737026173&ssPageName=STRK:MEWN:IT

More pictures of tube at
alt.binaries.pictures.radio

I bought a Eico 723 TX in the early 60,s with the idea I would become A Ham.
I didn't become a ham until 1978 so I never did get to used the Eico 723.
When I started in 1978 I bought a Heathkit HW-16 so I didn't need the Eico
so I sold it to another ham .
Seen this on ebay and had to have it.

Garry WW9GT

I like Spam, but not the kind you're referring to! It is a shame, but alas - a bunch of losers who have no life and think their offerings are humorous and entertaining. Maybe someday, they'll gather up enough intelligence to carry on an actual conversation with us, rather than offer up their garbage.

May Christmas bring them a virus to wipe out their computers so we won't have to tolerate them anymore or the good sense to know how to use it to the good.

To all the above, we can only hope!

TIA:

The C1 was a very common frequency meter similar to the BC-221 and used by
the RCAF. You may try the Communications &Electronics Museum in Kingston ON
who have one on display. I had one at one time and took it apart for
components. Some were made by Measurement Engineering in Arnprior On.
Good luck with your search.

Good luck with the 723 ...I built mine in 65 and haven't had it on the air since I moved about a yr and a half ago.. You just can't beat the clanging of that meter when transmitting ...I put the meter switch half way to quiet things down.

I was only in the rig one time in 40 years as the electrolytic cap went south about 15 years ago. It is a nice set with the 722 VFO and the 75-S1 I picked up years ago.

Catch you on the air ...

Merry Christmas and God Bless all and yours .... KI3R Tom Popovic

garlic cloves by making incisions,
and placing whole cloves deep into the meat.
Grease a baking pan, and fill with a thick bed of onions,
celery, green onions, and parsley.
Place roast on top with fat side up.
Place uncovered in 500° oven for 20 minutes, reduce oven to 325°.
Bake till medium rare (150°) and let roast rest.
Pour stock over onions and drippings, carve the meat and
place the slices in the au jus.

Bisque ° l?Enfant

Honor the memory of Grandma with this dish by utilizing her good
silver soup tureen and her great grandchildren (crawfish, crab or
lobster will work just as well, however this dish is classically
made with crawfish).

Stuffed infant heads, stuffed crawfish heads, stuffed crab or lobster shells;
make patties if shell or head is not available
(such as with packaged crawfish, crab, or headless baby).
Flour
oil
onions
bell peppers
garlic salt, pepper, etc.
3 cups chicken stock
2 sticks butter
3 tablespoons oil

First stuff the heads, or make the patties (see index)
then fry or bake.
Set aside to drain on paper towels.
Make a roux with butter, oil and flour,
brown vegetables in the roux, then add chicken stock and
allow to simmer for 20 minutes.
Add the patties or stuffed heads, and some loose crawfish,
lobster, long piglet, or what have you.
Cook on low for 15 minutes, then allow it to set for at least
15 minutes more.
Serve over steamed rice; this dish is very impressive!

Stuffed Cabbage Rolls

Babies really can be found under a cabbage leaf -
or one can arrange for ground beef to be found there instead.

8 large cabbage leaves
1 lb. lean ground newborn human filets, or ground chuck
Onions
peppers
celery
garlic
soy sauce
salt pepper, etc
Olive oil
breadcrumbs
Tomato Gravy (see index)

Boil the cabbage leaves for 2 minutes to soften.
In skillet, brown the meat in a little olive oil,
then add onions

6296. don't even try to wound a disc

1 premature baby, born dead
Large bunch of mustard greens
2 white onions, 1 cup chopped celery
Vegetable oil (or hog fat)
Salt, pepper, garlic, etc.

Lightly brown onions, celery, garlic and meat in large heavy pot.
Add a little water and the greens (which should be thoroughly cleaned and washed).
Smother slowly for at least 2 hours, adding small amounts of water
when it starts to stick.
Stir frequently.
When ready - serve with rice, grilled smoked sausage, green salad, and iced tea.
Coffee and apple pie then brandy.

Maternity Ward Pot Luck Dinner

If you can?t get anything fresh from the hospital, nursery, or morgue;
you can at least get rid of all the leftovers in your refrigerator.

1 - 2 lbs. cubed meat (human flesh, chicken, turkey, beef...)
1 -2 lbs. coarsely chopped vegetables
(carrots, potatoes, turnips, cauliflower, cabbage...)
Bell pepper
onions
garlic
ginger
salt pepper, etc.
Olive oil
butter

Brown the meat and some chopped onions, peppers, and garilic in olive oil,
place in baking dish, layer with vegetables

hours.
When browned, remove and glaze,
return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the children?s butts and the beef roast into pieces
that will fit in the grinder.
Run the meat through using a 3/16 grinding plate.
Add garlic, onions and seasoning then mix well.
Add just enough water for a smooth consistency, then mix again.
Form the sausage mixture into patties or stuff into natural casings.

Stillborn Stew

By definition, this meat cannot be had altogether fresh,
but have the lifeless unfortunate available immediately after delivery,
or use high quality beef or pork roasts (it is cheaper and better to
cut up a whole roast than to buy stew meat).

1 stillbirth, de-boned and cubed
cup vegetable oil
2 large onions
bell pepper
celery
garlic

in olive oil till golden brown, remove.
Add the garlic and onions and cook down a bit.
Add some lemon juice and some zest, then de-glaze with stock.
Add a little cornstarch (dissolved in cold water) to the sauce.
You are just about there, Pour the sauce over the cutlets,
top with parsley, lemon slices and cracked pepper.
Serve with spinach salad, macaroni and cheese (homemade) and iced tea...

Spaghetti with Real Italian Meatballs

If you don?t have an expendable bambino on hand,
you can use a pound of ground pork instead.
The secret to great meatballs, is to use very lean meat.

1 lb. ground flesh; human or pork
3 lb. ground beef
1 cup finely chopped onions
7 - 12 cloves garlic
1 cup seasoned bread crumbs
 cup milk, 2 eggs
Oregano
basil
salt
pepper
Italian seasoning, etc.
Tomato gravy (see index)
Fresh or at least freshly cooked spaghetti or other pasta

Mix the ground meats together in a large bowl,
then mix each of the other ingredients.
Make balls about the size of a baby?s fist
(there should be one lying around for reference).
Bake at 400for about 25 minutes -
or you could fry them in olive oil.
Place the meatballs in the tomato gravy, and simmer for several hours.
Serve on spaghetti.
Accompany with green salad, garlic b

de-bone and cube; continue to reduce the broth.
Brown the onions, peppers and celery.
Add the meat then season, continue browning.
De-glaze with sherry, add the reduced broth.
Finally, put in the root vegetables and simmer for 15 minutes.
Allow to cool slightly.
Place the pie pan in 375 degree oven for a few minutes so bottom crust is not soggy,
reduce oven to 325.
Fill the pie with stew, place top crust and with a fork, seal the crusts together
then poke holes in top.
Return to oven and bake for 30 minutes, or until pie crust is golden brown.

Sudden Infant Death Soup

SIDS: delicious in winter, comparable to old fashioned Beef and Vegetable Soup.
Its free, you can sell the crib, baby clothes, toys, stroller... and so easy to
procure if such a lucky find is at hand (just pick him up from the crib and
he?s good to go)!

SIDS victim, cleaned
½ cup cooking oil
Carrots
onions
broccoli
whole cabbage
fresh green beans
potato
turnip
celery
tomato
½ stick butter
1 cup cooked pasta (macaroni, shells, etc.)

Remove as much meat as possible, cube, and brown in hot oil.
Add a little water, season, then add the carcass.
Simmer for half an hour keeping the stock thick.
Remove the carcass and add the vegetables slowly to the stock,
so that it remains boiling the whole time.
Cover the pot and simmer till vegetables are tender
(2 hours approximately).
Continue seasoning to taste.
Before serving, add butter and pasta,
serve piping with hot bread and butter.

Offspring Rolls

Similar to Vietnamese style fried rolls, they have lots of meat (of course this can consist of chicken, beef, pork, or shrimp). Who can resist this classic appetizer; or light lunch served with a fresh salad? Versatility is probably this recipe?

pull the skin flaps up to close the cavity.
Now tie the thighs up tight to hold it all together.
Place breast side up in a large metal roasting pan.
Bake in 325° oven covered for 2 hours.
Remove cover, stick a cooking thermometer deep into one of the
baby?s buttocks and cook uncovered till thermometer reads 190°,
about another hour.

Pro-Choice Po-Boy

Soft-shelled crabs serve just as well in this classic southern delicacy.
The sandwich originated in New Orleans, where an abundance of abortion clinics
thrive and hot French bread is always available.

2 cleaned fetuses, head on
2 eggs
1 tablespoon yellow mustard
1 cup seasoned flour
oil enough for deep frying
1 loaf French bread
Lettuce
tomatoes
mayonnaise, etc.

Marinate the fetuses in the egg-mustard mixture.
Dredge thoroughly in flour.
Fry at 375° until crispy golden brown.
Remove and place on paper towels.

Holiday Youngster

One can easily adapt this recipe to ham, though as presented,
it violates no religious taboos against swine.

1 large toddler or small child, cleaned and de-headed
Kentucky Bourbon Sauce (see index)
1 large can pineapple slices
Whole cloves

Place him (or ham) or her in a large glass baking dish, buttocks up.
Tie with butcher string around and across so that he looks like
he?s crawling.
Glaze, then arrange pineapples and secure with cloves.
Bake uncovered in 350° oven till thermometer reaches 160°.

Cajun Babies

Just like crabs or crawfish, babies are boiled alive!
You don?t need silverware, the hot spicy meat comes off in your hands.

6 live babies
1 lb. smoked sausage
4 lemons
whole garlic
2 lb. new potatoes
4 ears corn
1 box salt
crab boil

Bring 3 gallons of water to a boil.
Add sausage, salt, crab boil, lemons and garlic.
Drop pota

allow to sit for a few minutes.
Saut&#65533; in butter and olive oil until golden brown,
about 6 minutes on each side.

Shish Kababes

As old as the hills, this technique has employed seafood, beef, pork, lamb,
poultry, and vegetables; just about anything can be grilled, and young humans
are no exception!

High quality marinade (Teriyaki and garlic perhaps)
1 inch cubes of tender meat, preferably from the nursery
Onions
bell peppers
Wooden or metal skewers

Marinate the meat overnight.
Get the grill good and hot while placing meat, vegetables, and
fruit such as pineapples or cherries on the skewers.
Don?t be afraid to use a variety of meats.
Grill to medium rare,
serve with garlic cous-cous and saut&#65533;ed asparagus.
Coffee and sherbet for desert then walnuts, cheese, and port.
Cigars for the gentlemen (and ladies if they so desire)!

Crock-Pot Crack Baby

When the quivering, hopelessly addicted crack baby succumbs to death,
get him immediately butchered and into the crock-pot, so that any
remaining toxins will not be fatal. But don?t cook it too long,
because like Blowfish, there is a perfect medium between the poisonous
and the stimulating. Though it may not have the same effect on your
guests, a whole chicken cooked in this fashion is also mighty tasty.

1 newborn - cocaine addicted, freshly expired, cleaned and butchered
Carrots
onions
leeks
celery
bell pepper
potatoes
Salt
pepper
garlic, etc

4 cups water

Cut the meat into natural pieces and brown very well in olive oil, remove, then brown half of the onions, the bell pepper, and celery. When brown, mix ev

carrying too much, nor will they have to make 10 trips back and fourth from the
service stations.

Roast Leg of Amputee

By all means, substitute lamb or a good beef roast if the haunch
it is in any way diseased. But sometimes surgeons make mistakes,
and if a healthy young limb is at hand, then don?t hesitate to cook
it to perfection!

1 high quality limb, rack, or roast
Potatoes, carrot
Oil
celery
onions
green onions
parsley
garlic
salt, pepper, etc
2 cups beef stock

Marinate meat (optional, not necessary with better cuts).
Season liberally and lace with garlic cloves by making incisions,
and placing whole cloves deep into the meat.
Grease a baking pan, and fill with a thick bed of onions,
celery, green onions, and parsley.
Place roast on top with fat side up.
Place uncovered in 500&#65533; oven for 20 minutes, reduce oven to 325&#65533;.
Bake till medium rare (150&#65533;) and let roast rest.
Pour stock over onions and drippings, carve the meat and
place the slices in the au jus.

Bisque &#65533; l?Enfant

Honor the memory of Grandma with this dish by utilizing her good
silver soup tureen and her great grandchildren (crawfish, crab or
lobster will work just as well, however this dish is classically
made with crawfish).

Stuffed infant heads, stuffed crawfish heads, stuffed crab or lobster shells;
make patties if shell or head is not available
(such as with packaged crawfish, crab, or headless baby).
Flour
oil
onions

bell peppers
garlic salt, pepper, etc.
3 cups chicken stock
2 sticks butter
3 tablespoons oil

First stuff the heads, or make the patties (see index)
then fry or bake.
Set aside to drain on paper towels.
Make a roux with butter, oil and flour,
brown vegeta

vegetables of choice (turnips, carrots, potatoes, etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section
of your favorite grocery and select 2 high quality pie crusts (you
will need one for the top also).
Boil the prepared delicacy until the meat starts to come off the bones.
Remove, de-bone and cube; continue to reduce the broth.
Brown the onions, peppers and celery.
Add the meat then season, continue browning.
De-glaze with sherry, add the reduced broth.
Finally, put in the root vegetables and simmer for 15 minutes.
Allow to cool slightly.
Place the pie pan in 375 degree oven for a few minutes so bottom crust is not soggy,
reduce oven to 325.
Fill the pie with stew, place top crust and with a fork, seal the crusts together
then poke holes in top.
Return to oven and bake for 30 minutes, or until pie crust is golden brown.

Sudden Infant Death Soup

SIDS: delicious in winter, comparable to old fashioned Beef and Vegetable Soup.
Its free, you can sell the crib, baby clothes, toys, stroller... and so easy to
procure if such a lucky find is at hand (just pick him up from the crib and
he?s good to go)!

SIDS victim, cleaned
½ cup cooking oil
Carrots
onions
broccoli
whole cabbage
fresh green beans
potato
turnip
celery
tomato
½ stick butter
1 cup cooked pasta (macaroni, shells, etc.)

Remove as much meat as possible, cube, and brown in hot oil.
Add a little water, season, then add the carcass.
Simmer for half an hour keeping the stock thick.
Remove the carcass and add the vegetables slowly to the stock,
so that it remains boiling the whole time.

Cover the pot and simmer till vegetables are tender
(2 hours approximately).
Continue seasoning to taste.
Before serving, add butter and pasta,
serve piping with hot bread and butter.

with hot bread and butter.

Offspring Rolls

Similar to Vietnamese style fried rolls, they have lots of meat
(of course this can consist of chicken, beef, pork, or shrimp).
Who can resist this classic appetizer; or light lunch served with
a fresh salad? Versatility is probably this recipe?s greatest virtue,
as one can use the best part of a prime, rare, yearling, or the
morticians occasional horror: a small miracle stopped short by a
drunk driver, or the innocent victim of a drive-by shooting...

2 cups finely chopped very young human flesh
1 cup shredded cabbage
1 cup bean sprouts
5 sprigs green onion, finely chopped
5 cloves minced garlic
4-6 ounces bamboo shoots
Sherry
chicken broth
oil for deep frying (1 gallon)
Salt
pepper
soy & teriyaki
minced ginger, etc.
1 tablespoon cornstarch dissolved in a little cold water
1 egg beaten

Make the stuffing:
Marinate the flesh in a mixture of soy and teriyaki sauces
then stir fry in hot oil for till brown - about 1 minute, remove.
Stir-fry the vegetables.
Put the meat back into the wok and adjust the seasoning.
De-glaze with sherry, cooking off the alcohol.
Add broth (optional) cook a few more minutes.
Add the cornstarch, cook a few minutes till thick,
then place the stuffing into a colander and cool;
2 hours
Wrap the rolls:
Place 3 tablespoons of stuffing in the wrap, roll tightly -
corner nearest you first, fold 2 side corners in,
wrap till remaining corner is left.
Brush with egg, seal, and allow to sit on the seal for
a few minutes.

Fry the rolls:
325&#65533; if using egg roll wraps, 350&#65533; for spring roll wraps.
Deep fry in peanut oil till crispy golden brown, drain on paper towels.

Lemon Neonate

Turkey serves just as well, and in fact even loo

Spaghetti with Real Italian Meatballs

If you don?t have an expendable bambino on hand,
you can use a pound of ground pork instead.
The secret to great meatballs, is to use very lean meat.

1 lb. ground flesh; human or pork
3 lb. ground beef
1 cup finely chopped onions
7 - 12 cloves garlic
1 cup seasoned bread crumbs
½ cup milk, 2 eggs
Oregano
basil
salt
pepper
Italian seasoning, etc.
Tomato gravy (see index)
Fresh or at least freshly cooked spaghetti or other pasta

Mix the ground meats together in a large bowl,
then mix each of the other ingredients.
Make balls about the size of a baby?s fist
(there should be one lying around for reference).
Bake at 400°for about 25 minutes -
or you could fry them in olive oil.
Place the meatballs in the tomato gravy, and simmer for several hours.
Serve on spaghetti.
Accompany with green salad, garlic bread and red wine.

Newborn Parmesan

This classic Sicilian cuisine can easily be turned into Eggplant Parmesan
If you are planning a vegetarian meal. Or you could just as well use veal -
after all, you have to be careful - Sicilians are touchy about their young
family members...

6 newborn or veal cutlets
Tomato gravy (see index)
4 cups mozzarella, 1cup parmesan, 1cup romano
Seasoned bread crumbs mixed with
parmesan
romano
salt
pepper

oregano
garlic powder
chopped parsley
Flour
eggwash (eggs and milk)
Peanut oil for frying.

Pound the cutlets.
Dredge in flour, eggs, then the bread crumb mixture.
Fry till golden brown in 350° peanut oil.
In a baking pan, place a layer of gravy,
then one of meat, gravy, and cheese.
Another layer each of meat, gravy, and cheese.
Then bake at 350°

place the slices in the au jus.

Bisque ♦ l?Enfant

Honor the memory of Grandma with this dish by utilizing her good
silver soup tureen and her great grandchildren (crawfish, crab or
lobster will work just as well, however this dish is classically
made with crawfish).

Stuffed infant heads, stuffed crawfish heads, stuffed crab or lobster shells;
make patties if shell or head is not available
(such as with packaged crawfish, crab, or headless baby).
Flour
oil
onions
bell peppers
garlic salt, pepper, etc.
3 cups chicken stock
2 sticks butter
3 tablespoons oil

First stuff the heads, or make the patties (see index)
then fry or bake.
Set aside to drain on paper towels.
Make a roux with butter, oil and flour,
brown vegetables in the roux, then add chicken stock and
allow to simmer for 20 minutes.
Add the patties or stuffed heads, and some loose crawfish,
lobster, long piglet, or what have you.
Cook on low for 15 minutes, then allow it to set for at least
15 minutes more.
Serve over steamed rice; this dish is very impressive!

Stuffed Cabbage Rolls

Babies really can be found under a cabbage leaf -
or one can arrange for ground beef to be found there instead.

8 large cabbage leaves
1 lb. lean ground newborn human filets, or ground chuck
Onions
peppers
celery

garlic
soy sauce
salt pepper, etc
Olive oil
breadcrumbs
Tomato Gravy (see index)

Boil the cabbage leaves for 2 minutes to soften.
In skillet, brown the meat in a little olive oil,
then add onions, peppers, and celery (all chopped finely)
and season well.
Place in a large bowl and cool.
Add seasoned breadcrumbs and a little of the tomato gravy,
enough to make the mixture pliable.
Divide the stuffing among the cabbage leaves then roll.
Place seam down in a baking pan.

meat quickly in very hot oil, remove and set aside.
Brown the onions, celery, pepper and garlic.
De-glaze with wine, return meat to the pan and season well.
Stew on low fire adding small amounts of water and
seasoning as necessary.
After at least half an hour, add the carrots and potatoes,
and simmer till root vegetables break with a fork.
Cook a fresh pot of long grained white rice.

Pre-mie Pot Pie

When working with prematurely delivered newborns (or chicken) use sherry;
red wine with beef (buy steak or roast, do not pre-boil).

Pie crust (see index)
Whole fresh pre-mie; eviscerated, head, hands and feet removed
Onions, bell pepper, celery
&#65533; cup wine
Root vegetables of choice (turnips, carrots, potatoes, etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section
of your favorite grocery and select 2 high quality pie crusts (you
will need one for the top also).
Boil the prepared delicacy until the meat starts to come off the bones.
Remove, de-bone and cube; continue to reduce the broth.

each of meat, gravy, and cheese.
Then bake at 350° for 45 minutes.
Serve on hot pasta with romano cheese.

Southern Fried Small-fry

Tastes like fried chicken, which works just as well.
In fact you may want to practice cutting up whole chickens
for frying before you go for the real thing.
Whole chicken is much more efficient and inexpensive than buying pieces.

1 tiny human, cut into pieces
2 cups flour
Onion, garlic
Salt
pepper
garlic powder
cayenne pepper
hot sauce, etc.
Oil for frying

Mix milk, eggs, hot sauce in a bowl, add chopped onion and garlic.
Season the meat liberally, and marinate for several hours.
Place seasoned flour in a paper or plastic shopping bag,
drop pieces in a few a time, shake to coat thoroughly,
then deep fry in hot oil (350°) for about 15 minutes.
Drain and place on paper towels.

Miscarriage with Mustard Greens

Why waste it? Otherwise, and in general, use ham or salt pork to season greens.
The technique of smothering greens can be used with many vegetables;
green beans work especially well. Meat is not necessary every day, don?t
be afraid to alter any dish to vegetarian tastes.

1 premature baby, born dead
Large bunch of mustard greens
2 white onions, 1 cup chopped celery
Vegetable oil (or hog fat)
Salt, pepper, garlic, etc.

Lightly brown onions, celery, garlic and meat in large heavy pot.
Add a little water and the greens (which should be thoroughly cleaned and washed).
Smother slowly for at least 2 hours, adding small amounts of water
when it starts to stick.
Stir frequently.

When ready - serve with rice, grilled smoked saus

babies are boiled alive!
You don?t need silverware, the hot spicy meat comes off in your hands.

6 live babies
1 lb. smoked sausage
4 lemons
whole garlic
2 lb. new potatoes
4 ears corn
1 box salt
crab boil

Bring 3 gallons of water to a boil.
Add sausage, salt, crab boil, lemons and garlic.
Drop potatoes in, boil for 4 minutes.
Corn is added next, boil an additional 11 minutes.
Put the live babies into the boiling water and cover.
Boil till meat comes off easily with a fork.

Oven-Baked Baby-Back Ribs

Beef ribs or pork ribs can be used in this recipe,
and that is exactly what your dinner guests will assume!
An excellent way to expose the uninitiated to this highly misunderstood
yet succulent source of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

Remove the silverskin by loosening from the edges,
then stripping off.
Season generously, rubbing the mixture into the baby?s flesh.
Place 1 quart water in a baking pan, the meat on a wire rack.
Bake uncovered in 250° oven for 1° hours.
When browned, remove and glaze,
return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.

But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the children?s butts and the beef roast into pieces
that will fit in the grinder.
Run the mea

yet succulent source of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

Remove the silverskin by loosening from the edges,
then stripping off.
Season generously, rubbing the mixture into the baby?s flesh.
Place 1 quart water in a baking pan, the meat on a wire rack.
Bake uncovered in 250° oven for 1° hours.
When browned, remove and glaze,
return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar
1 teaspoon sage
2 onions
6 cloves garlic

bunch green onions, chopped

Cut the children?s butts and the beef roast into pieces
that will fit in the grinder.
Run the meat through using a 3/16 grinding plate.
Add garlic, onions and seasoning then mix well.
Add just enough water for a smooth consistency, then mix again.
Form the sausage mixture into patties

tender
(2 hours approximately).
Continue seasoning to taste.
Before serving, add butter and pasta,
serve piping with hot bread and butter.

Offspring Rolls

Similar to Vietnamese style fried rolls, they have lots of meat
(of course this can consist of chicken, beef, pork, or shrimp).
Who can resist this classic appetizer; or light lunch served with
a fresh salad? Versatility is probably this recipe?s greatest virtue,
as one can use the best part of a prime, rare, yearling, or the
morticians occasional horror: a small miracle stopped short by a
drunk driver, or the innocent victim of a drive-by shooting...

2 cups finely chopped very young human flesh
1 cup shredded cabbage
1 cup bean sprouts
5 sprigs green onion, finely chopped
5 cloves minced garlic
4-6 ounces bamboo shoots
Sherry
chicken broth
oil for deep frying (1 gallon)
Salt
pepper
soy & teriyaki
minced ginger, etc.
1 tablespoon cornstarch dissolved in a little cold water
1 egg beaten

Make the stuffing:
Marinate the flesh in a mixture of soy and teriyaki sauces
then stir fry in hot oil for till brown - about 1 minute, remove.
Stir-fry the vegetables.
Put the meat back into the wok and adjust the seasoning.
De-glaze with sherry, cooking off the alcohol.
Add broth (optional) cook a few more minutes.
Add the cornstarch, cook a few minutes till thick,
then place the stuffing into a colander and cool;
2 hours
Wrap the rolls:
Place 3 tablespoons of stuffing in the wrap, roll tightly -

corner nearest you first, fold 2 side corners in,
wrap till remaining cor

Add the cornstarch, cook a few minutes till thick,
then place the stuffing into a colander and cool;
2 hours
Wrap the rolls:
Place 3 tablespoons of stuffing in the wrap, roll tightly -
corner nearest you first, fold 2 side corners in,
wrap till remaining corner is left.
Brush with egg, seal, and allow to sit on the seal for
a few minutes.
Fry the rolls:
325&#65533; if using egg roll wraps, 350&#65533; for spring roll wraps.
Deep fry in peanut oil till crispy golden brown, drain on paper towels.

Lemon Neonate

Turkey serves just as well, and in fact even looks a bit like a
well-dressed baby. By the time you turn the child?s breast into
cutlets, it will be indistinguishable. The taste of young human,
although similar to turkey (and chicken) often can be wildly
different depending upon what he or she has consumed during its
10 to 14 months of life...

4 well chosen cutlets (from the breasts of 2 healthy neonates)
2 large lemons (fresh lemons always, if possible)
Olive oil
Green onions
Salt
pepper
cornstarch
neonate stock (chicken, or turkey stock is fine)
garlic
parsley
fresh cracked black pepper

Season and saut&#65533; the cutlets in olive oil till golden brown, remove.
Add the garlic and onions and cook down a bit.
Add some lemon juice and some zest, then de

Coffee and sherbet for desert then walnuts, cheese, and port.
Cigars for the gentlemen (and ladies if they so desire)!

Crock-Pot Crack Baby

When the quivering, hopelessly addicted crack baby succumbs to death, get him immediately butchered and into the crock-pot, so that any remaining toxins will not be fatal. But don?t cook it too long, because like Blowfish, there is a perfect medium between the poisonous and the stimulating. Though it may not have the same effect on your guests, a whole chicken cooked in this fashion is also mighty tasty.

1 newborn - cocaine addicted, freshly expired, cleaned and butchered
Carrots
onions
leeks
celery
bell pepper
potatoes
Salt
pepper
garlic, etc
4 cups water

Cut the meat into natural pieces and brown very well in olive oil, remove, then brown half of the onions, the bell pepper, and celery. When brown, mix everything into the crock-pot, and in 6 to 8 hours you have turned a hopeless tragedy into a heartwarming meal!

George?s Bloody Mary

Don?t shy away from this one, it is simply a cocktail variation of good old Blood Stew. When a pig is killed, its throat is slit and those present quaf

pan.
Ladle tomato gravy on top,
and bake at 325° for 30 - 45 minutes.

Umbilical Cordon Bleu

Nothing is so beautiful as the bond between mother and child,
so why not consume it?
Children or chicken breasts will work wonderfully also.

4 whole umbilical chords (or baby breasts, or chicken breasts)
4 thin slices of smoked ham, and Gruyere cheese
Flour
eggwash (milk and eggs)
seasoned bread crumbs
1 onion
minced
salt
pepper
butter
olive oil

Pound the breasts flat (parboil first if using umbilical
cords so they won?t be tough).
Place a slice of ham and cheese on each, along with some minced onion
then fold in half, trimming neatly.
Dredge in flour, eggwash, then seasoned breadcrumbs;
allow to sit for a few minutes.
Sauté in butter and olive oil until golden brown,
about 6 minutes on each side.

Shish Kababes

As old as the hills, this technique has employed seafood, beef, pork, lamb,
poultry, and vegetables; just about anything can be grilled, and young humans
are no exception!

High quality marinade (Teriyaki and garlic perhaps)
1 inch cubes of tender meat, preferably from the nursery
Onions
bell peppers
Wooden or metal skewers

Marinate the meat overnight.
Get the grill good and hot while placing meat, vegetables, and

fruit such as pineapples or cherries on the skewers.
Don?t be afraid to use a variety of meats.
Grill to medium rare,
serve with garlic cous-cous and saut&#65533;ed asparagus.
Coffee and sherbet for desert then walnuts, cheese, and port.
Cigars for the gentlemen (and ladies if they so desire)!

carrot
Oil
celery
onions
green onions
parsley
garlic
salt, pepper, etc
2 cups beef stock

Marinate meat (optional, not necessary with better cuts).
Season liberally and lace with garlic cloves by making incisions,
and placing whole cloves deep into the meat.
Grease a baking pan, and fill with a thick bed of onions,
celery, green onions, and parsley.
Place roast on top with fat side up.
Place uncovered in 500° oven for 20 minutes, reduce oven to 325°.
Bake till medium rare (150°) and let roast rest.
Pour stock over onions and drippings, carve the meat and
place the slices in the au jus.

Bisque à l?Enfant

Honor the memory of Grandma with this dish by utilizing her good
silver soup tureen and her great grandchildren (crawfish, crab or
lobster will work just as well, however this dish is classically
made with crawfish).

Stuffed infant heads, stuffed crawfish heads, stuffed crab or lobster shells;
make patties if shell or head is not available
(such as with packaged crawfish, crab, or headless baby).
Flour
oil
onions
bell peppers
garlic salt, pepper, etc.
3 cups chicken stock
2 sticks butter
3 tablespoons oil

First stuff the heads, or make the patties (see index)
then fry or bake.
Set aside to drain on paper towels.
Make a roux with butter, oil and flour,
brown vegetables in the roux, then add chicken stock and

allow to simmer for 20 minutes.
Add the patties or stuffed heads, and some loose crawfish,
lobster, long piglet, or what have you.
Cook on low for 15 minutes, then allow it to set for at least
15 minutes more.
Serve over steamed rice; this dish is very impressive!

Stuffed Cabbage Rolls

Babies really can be found under a cabbage leaf -
or one can arrange for ground beef to be found there instead.

8 large cabbage leaves
1 lb. lean ground newborn h

beef or pork roasts (it is cheaper and better to
cut up a whole roast than to buy stew meat).

1 stillbirth, de-boned and cubed
&#65533; cup vegetable oil
2 large onions
bell pepper
celery
garlic
&#65533; cup red wine
3 Irish potatoes
2 large carrots

This is a simple classic stew that makes natural gravy,
thus it does not have to be thickened.
Brown the meat quickly in very hot oil, remove and set aside.
Brown the onions, celery, pepper and garlic.
De-glaze with wine, return meat to the pan and season well.
Stew on low fire adding small amounts of water and
seasoning as necessary.
After at least half an hour, add the carrots and potatoes,
and simmer till root vegetables break with a fork.
Cook a fresh pot of long grained white rice.

Pre-mie Pot Pie

When working with prematurely delivered newborns (or chicken) use sherry;
red wine with beef (buy steak or roast, do not pre-boil).

Pie crust (see index)
Whole fresh pre-mie; eviscerated, head, hands and feet removed
Onions, bell pepper, celery
&#65533; cup wine
Root vegetables of choice (turnips, carrots, potatoes, etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section
of your favorite grocery and select 2 high quality pie crusts (you
will need one for the top also).
Boil the prepared delicacy until the meat starts to come off the bones.
Remove, de-bone and cube; continue to reduce the broth.
Brown the onions, peppers and celery.
Add the meat then season, continue browning.
De-glaze with sherry, add the reduced broth.
Finally, put in the root vegetables and simmer for 15 minutes.
Allow to cool slightly.

Place the pie pan in 375 degree oven for a few minutes so bottom crust is not soggy, reduce ove

6330. Hallicrafters S40-B

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-26 01:37:26 UTC
From: John Steffes <jsteffes@cfl.rr.com>
Message-ID: <qBozd.190383$6w6.157424@tornado.tampabay.rr.com>
Source record: 20391

Recently acquired a Hallicrafters S40-B reciever that was DOA. We made a few repairs and got it working (including some tube replacement and coil damage repair). We were a little alarmed when some of the voltages on the screens & plates were a lot higher than they should be. We then checked the schematic with actual resistor values and they came close in agreement with each other. Especially concerned about the higher voltages on the R.F. AMP tube (6SG7). Any suggestions?

Also; has anyone looked into making a temporary mod to change the BFO into a Q Multiplier? The idea would be to add a .005, 500WVDC capacitor from the grid of V5 (6SC7) to the plate of V2 (6SA7), and inserting a 50K variable resistor between pin 6 and ground of V5 (6SG7). The 50K variable resistor would act as a gain control and affect the "Q" or bandwith.

John

older receivers usually had a choke input at the PS filter ..if someone took the choke out or made the circuit a cap input,the voltages would be noticeably higher..just a thought..There are several schemes that have been used to create a product detector in the BFO circuit,I am not familiar with them ,but am interested .. The S-40B doesn't use a filter choke. It uses simple RC filtering.

The voltages are to be measured with the receiver set up as described in the manual, that is without a signal being received. With a strong signal present, the AVC voltage will increase the bias on the RF (6SG7) and IF tubes (6SK7s) and the screen voltage will increase over the no-signal condition. The B+ will increase a bit also. Another problem is today's higher line voltages. Most of these old radios are designed for 115 or 117 volts and when operated on 123-125 volts the B+ will be 15 or 20 volts higher than normal (115 VAC operation).
Best Regards,

Ed

Hi, Phil

I have a 4 Amp Superior Electric "Powerstat", and it seems of nice
quality. A one amp Ohmite variable autotransformer also seems OK.

Ignoring your misspelling for the moment, "variac" has become a generic
term, much like "kleenex", like it or not.

Hi.

Have a sick RA17. Noticed that VFO2 tunes 3.1-2.1 rather than the 2.1-3.1 I was expecting from the equipment output socket. This seems to be at odds with the manual.

Anyone know if 3.1-2.1 (i.e. 0-1000kcs on display) is correct? If not what could cause this inversion.

The only thing lightning fast about CT(R)'s was how fast they could spill a
mug of coffee or a Coke into a TTY or a piece of electronic equipment and
yell "matman"!
Actually the CT rating was more properly known as the crossed swab and
buffer. Of course, we told RM's we talked to god and wrote down what he
said!
I wanted to be an RM, arriving in boot camp with a First Phone/Radar,
General Class ham ticket and 3 years of Navy MARS experience. I was told my
GCT/ARI was too high, so off to ET school which I challenged and finished in

5 weeks, then DS "A" and suddenly I was ranked with the 2 percent of ET/DS
that could read and became a CT (M).

I, too, became a "lightning fast chicken plucker" CT(R) after a few
years as a ham. We seldom spilled our coffee into gear, though we did
beat the c**p out of our mills copying code at 35+ gpm. I think each of
our operators had 3 of those old typewriters, 1 in use and 2 in the shop
for the matmen to try to cobble back together. Fortunately our R390's
were pretty indestructable.

Back to the original topic here, we got so familiar with the "fist" of
each of the operators of the stations we monitored, we could identify
most stations without hearing callsigns. This was even more useful in
telling us when and where units were being rotated.

After a couple of years of copying code like that, I went back to
civilian life and haven't made more than half a dozen cw qsos since.

On closer examination again, I do now see a couple of small diodes (both have the number 205) which were hiding behind some black spaghetti pushed up against them. This little homebrew seems to have been carefully assembled and I have no reason to believe that the 6L6 is not the correct tube. The little rig does work, but, as mentioned, the CW note was quite distorted and unacceptable. How would one go about trouble shooting this problem. At this point I have limited bench equipment , but might consider acquiring some. An oscilloscope is high on the want list. Can you point to a part of the circuit which would result in this very chirpy and wobbly CW tone. I would have to fire it up again to remember how best to describe the sound of this signal.

Thanks for all the input. We found a suspect resistor in the B+, just at the filter capacitor. It's a 1500 ohm, 10 watt unit that now measures 1400 ohms. We'll try a higher value (say 1800 ohms) based on the "revised" house line input voltage to bring the overall voltage down a tad.

Chirp can be caused by different causes.

1. The crystal may simply change frequency when first loaded. Try a different crystal, or try the crystal in a different transmitter.

2. Feedback may be incorrect. Too much feedback can cause chirp. Depending upon the circuit, you can change feedback by varying the capacitance between grid and cathode.

3. Voltage stabilization. A stable voltage is less likely to chirp. Sometimes varying the screen voltage will help make the oscillator less likely to drift.

Draw your circuit out and match it to one in the older Radio Amateur Handbook. Oscillator circuits are as simple as the Model T.

The very first place to go is to check all of the chassis
grounds. If solder lugs are screwed to the chassis, loosen them and
then retighten them. If the octal tube socket has a ground ring, and metal
ears as many do, loosen its screws, and retighten them. Clean and lube the
wipers of any trimmer caps or air variable tuning caps. Clean up the pins
and socket for the crystal. Next would be any electrolytics in the circuit.
And, of course, any paper capacitors. If there are any "dogbone" resistors,
get rid of them and replace them with "modern" carbon composition resistors.

A lot of faults can be found by just listening to the note on a receiver,
and wiggling stuff around.

I only use Variacs (spelled with a capital V), i.e., General Radio.
They invented the variable autotransformer and, IMHO, built the best
(and probably most expensive).

Like most hams, I use whatever brand I can find at a swap meet. Never had a bad one, except for the one that came without a brush to connect to the windings.

My theory is that if you find an old well used one, it means that it was a good design and will likely last the rest of your life.

Beware of a like new used one - there may be a reason it was not used much.

head on
2 eggs
1 tablespoon yellow mustard
1 cup seasoned flour
oil enough for deep frying
1 loaf French bread
Lettuce
tomatoes
mayonnaise, etc.

Marinate the fetuses in the egg-mustard mixture.
Dredge thoroughly in flour.
Fry at 375&#65533; until crispy golden brown.
Remove and place on paper towels.

Holiday Youngster

One can easily adapt this recipe to ham, though as presented,
it violates no religious taboos against swine.

1 large toddler or small child, cleaned and de-headed
Kentucky Bourbon Sauce (see index)
1 large can pineapple slices
Whole cloves

Place him (or ham) or her in a large glass baking dish, buttocks up.
Tie with butcher string around and across so that he looks like
he?s crawling.
Glaze, then arrange pineapples and secure with cloves.
Bake uncovered in 350&#65533; oven till thermometer reaches 160&#65533;.

Cajun Babies

Just like crabs or crawfish, babies are boiled alive!
You don?t need silverware, the hot spicy meat comes off in your hands.

6 live babies
1 lb. smoked sausage
4 lemons
whole garlic
2 lb. new potatoes
4 ears corn
1 box salt
crab boil

Bring 3 gallons of water to a boil.
Add sausage, salt, crab boil, lemons and garlic.

Drop potatoes in, boil for 4 minutes.
Corn is added next, boil an additional 11 minutes.
Put the live babies into the boiling water and cover.
Boil till meat comes off easily with a fork.

Oven-Baked Baby-Back Ribs

Beef ribs or pork ribs can be used in this recipe,
and that is exactly what your dinner guests will assume!
An excellent way to expose the uninitiated to this highly misunderstood
yet succulent source of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

Remove the si

Hello Brian and Stan.

Thank you for confirming my measurements, couldn't imagine it working any other way. I can cross VFO2 off the possible cause list...

Brian.

PS If I feed 2.5mhz into the set via antenna socket from a signal generator the set receives it at 2.5mhz. If I tune the sig gen to 2.6mhz, the RA17 receives at 2.4 (2.7/2.3; 2.8/2.2; 2.4/2.6) etc. Any suggestions on the cause appreciated. It receives nothing else.

6369. WWII Japanese 94-5 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-28 14:48:09 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <41D17184.2060104@ix.netcom.com>
Source record: 20330

I just acquired my first piece of Axis gear-
a Japanese 94-5 receiver.
I'm tickled but, being a compulsive "completeist,"
I've now let my self in for a likely doomed
attempt at finding all the other "goodies" for a 94-5 set.

It's in very nice shape on the panel and inside,
but the case has some "issues." Some of the
hardware has been removed and the leather flaps are missing.

1. Can someone take some photos of the sides and top of
an original case so I can fabricate replacement hardware?
Also- how did the leather attach?
Are there any good-condition cases floating around?

2. Does anyone have a circuit diagram? I have no
intention of making any wiring changes at all.
With the exception of a couple of wires tacked in
for a headphone, it's all original and very clean.
I'd love to hear it, but if I can't get it to
play without changes than it just doesn't play.

3. What's the current "feel" for repainting the case?

4. The tubes inside are based like many British tubes
of the same era- 4-pinner with one pin offset and
"banana plug" leaf springs on the pins. Are their
British tubes that will work here? They might be
hard to find and expensive, but I suspect not as
scarce as these originals with pre-war kanjis on them.

5. Two tube shields are missing. They look like
common shields that were on several commercial
American radios in the 1930s. Anyone?

6. The filament pot knob is offset 45 degrees
from the correct position, but I'm intimidated about
trying to remove and fix it. Are these knobs fragile?

7. Know anyone who can read pre-war kanjis?

8. The tuning charts are beginning to fade.
I'm carefully removing the charts to scan them.
Any attempt to put the originals back in the
tight little holders would surely destroy them,
so they will go in preserving sleeves and
be replaced by the replicas.

Anyone want copies of the scans?

Thanks for any help.
73 Dave S.

6370. Free quick easy money Amazing !!!!!!!!!!!!

Free quick easy money Amazing !!!!!!!!!!!!
Date: 22 Dec 04

Comments

HOW TO TURN $6 INTO $6,000!!!!!! READING THIS COULD CHANGE YOUR LIFE! I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, Yeah right, this must be a scam,but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: what have I got to lose except 6 stamps and $6.00, right? Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works....Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage) IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to

the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success: STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper;PLEASE PUT ME ON YOUR MAILING LIST. Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

#1)Randall Hines 22 Stature Dr. Newark
DE 19713

#2) Mike Sharrer 921 West State St. Coopersburg PA 18036

#3) Jeffrey Hyun 17414Stark Ave Cerritos,CA 90703

#4) James Adair the third 22 Over Rd. Feasterville PA 19053

#5) TSR Solutions 15907 Golden Eye CT Parker CO 80134

#6) Daryl L. 6063 Roosevelt Blvd Apt# 216 Philadelphia PA 19149

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list. STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for

only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to. Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.** Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, &quote;what if the plan is played out and no one sends you the money?

So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember: play FAIRLY and HONESTLY and this will really work.

The first thing I would check is the local oscillator input to the second
mixer. It should be 37.5MHz at several volts. It can be checked on test
point 3 (I assume you have a circuit).

When I bought my used Powerstat, I was told that it was 4 amp maximum.
That may be a wild guess by the previous owner.
(It is not a standard component, was once part of a motorized
voltage regulator). The iron core is about 4 inches in diameter,
and 3 inches long. Can anyone tell me what the maximum rating is?

Thanks,
Ed Knobloch

I am now closing out most of my RF type and industrial tubes. If there is anything here you need, please make some offers now ... I have at least 2 of each, up to 30 pcs of some. Most are NOS, some I have used or both.

RCA
802, 807, 811, 812, 815, 826, 866A,

512AX, 927, 934, 5583, 5642, 5651, 5654, 5696, 5725, 5726, 5751, 5755, 5763, 5814, 5823/1C21

Have a bunch of sweep tubes left too, like 6JE6, 6JB6, 6KD6,. etc and the odd filiment versions of same. I have many other old tubes so send any wants. Have Xicon capacitors too.

Ready to make some great deals...
I restore antique radios and just dont use these at all. Will trade for 6G5, 6U5, 6E5 eye tubes or antique home radio knobs for Philco, Zenith, etc.

Mark Oppat
Antique Audio

Throw 60W lamps on it.

When you have enough lamps that the winding gets too hot to touch for
a count of three seconds after the normal amount of operating time, you
are at the rating.

Note that a unit that is rated to 4 amps on a 50% duty cycle at 10 seconds
is probably rated for around 2 amps continuous duty.

Hi, Bill

It looks like AWG #20 enameled wire.
There is also a fixed tap about 40% of the way
back from one end of the winding.

73,
Ed Knobloch

4 amps intermittent might be reasonable. Continuous may be a little
optimistic. A lot depends on how big a fan you have. <g>

6381. Star Roamer Update

Newsgroup: rec.radio.amateur.boatanchors
Date: 2004-12-29 11:43:52 UTC
From: patgkz <patgkz@new.rr.com>
Message-ID: <YLwAd.163342$ye4.137227@twister.rdc-kc.rr.com>
Source record: 20342

Got my Roamer for Christmas. Got most of the mechanical assembly done. The plastic nutdriver that came with it is very handy. I hope I got the bandswitch mounted correctly, it may be turned 180-degrees but I don't think it may harm performance.

I've been studying the soldering lesson included in the manual. One America, two America, three America..... I hope my 200 watt gun will work OK, but I may go down to Allied and pick up a 40 watt pencil.

Wish me luck

Hi Everyone,

This is my first post here but I am a regular of rec.antiques.radio+phono. I currently have a Lafayette HA-800 on my bench with no reception and a schematic would be helpful. If anyone could send me a scan I would appreciate it. You can reply to this message as I use my real email address.

Thanks in advance!

I got mine about a year ago after a wait since about 1967 or so. Mine came pre-assembled, and had a horrible hum. Of course, the old multiple section electrolytic had long ago given up the ghost. A few new capacitors and the hum is gone, and it works quite well. Fortunately, the previous assembler had done a pretty good job, but there were a few solder joints that I touched up anyway...

If you are assembling a kit fresh, before you put in the electrolytic caps it would be good to check them first, if only to save the frustration later if/when you need to replace them.

I prefer a temperature controlled 60-watt pencil (the Weller WTCPN and other similar models come to mind, though I currently have the variable temperature model which I think is a WTCPS.) Having a decent soldering pencil can make it a lot easier, as does decent quality solder (Ersin multicore is my favorite, and a pound spool lasts for years unless you are working in an engineering lab like I used to.)

Good Luck, it's really quite fun to fire up the Star Roamer, and hear it come to life as the tubes warm up!

Because it raises price standards for everyone else. Next time you go to
buy an item at a hamfest, the guy selling it will say, "well, I hear one of
these went for a million dollars on Ebay..." Inexperienced bidders who don't
know what things are worth, and bidding wars between people who desperately
have to have an item, tend to raise the overall market value of an item more
than it should be.

Well it was interesting and good for a chuckle -- 29 bids on a SB-104A for
$1000 +
But DXace has a point -- you can ask whatever you want - on e-bay and
hamfests
If someone wants it they will pay "insane" prices -- so what ??
Think its called free enterprise -- hooray fer that.

At the next Hamfest when a guy quotes e-bay prices -- reply we ain't on
e-bay
I disagree with "it will inflate the prices"
Smart sellers and buyers know better
Or should
"Inexperienced bidders" are just that -- ebay not withstanding

The thing about e-bay is it is world wide -- thousands of potential bidders
and some one who has coveted an item for years will come rising up out the
woodwork

Remember -- money is no object with some bidders in an auction, have never
seen that at a hamfest - generally it is a very poor place to sell things.

I offered a rare ham book at a hamfest for $25 -- guy sed I'll give you
5 -- I replied which Chapter do you want (;-)

Sold on e-bay for $28
Case Closed

--

$1,000+ for a Heathkit SB-104A.

What? "more than it should be"???? Who sets the price? The price
is whatever the market says the price is. Neither you nor I get to
decide. If there are a million well-heeled bidders who run the
price to the sky, well, that's the price that the market set.

In the last year, I went to a dozen hamfests in the Middle Atlantic.
I didn't see a single SB-104A. None, nada, zippo.

In fact, I saw, maybe, a dozen interesting, pre-1980's radios.
Pre-1980 radio's are vanishing into private collections, for
whatever reason.

What happens when there are none to be had? The price rises until
someone is induced to sell.

If you want to see insane prices, go to www.longandfoster.com and
enter zipcode 22305. At the bottom of the page there is a $411,900
rental-look row house.

Garry,

I also have a 723 and the mavching 722 VFO (see
http://www.geocities.com/gvernucci/station.html).

One thing I did'nt like was the fact that, to switch from receive to transmit and viceversa, one must turn a knob. The same thing to tune the transmitter. Doing that many times, the plastic knob will surely break.

With the addition of a foot PTT (a pedal) and some rewiring of the transmitter, I can now operate it without ever touching the function switch knob:

- for tuning the transmitter just press the CW key
- for transmitting over the air, press the foot pedal too

Something has changed on eBay. Earlier today, it showed several thousands
of dollars.

Hehe...looks like K7HBC pulled his $10,000.00 bid. See bottom of the page. He apparently meant $100.00 and the gbp333(9) guy was bidding up against that max. I wonder if gbp333(9) feels stoopid or happy (or both) right about now?

I does not appear he has any problem, lots of crazy bidding happens on
ebay. Often times an item will sell for more than it can be had for new.

I doubt if anyone has a 'problem' with this, but that does not exclude
the inevitability others may find it quite amusing...

Recently a Uniden apco25 scanner sold for $710 plus s&h, yet they're
readily available for $549 new with warranty.

I'm sure many people found that hilarious...
(maybe your humor routines are offline... :)

Happy New Year to all!

Hi all,
I received e-mail this evening telling me that it is nice to have Harry's Homebrew Homepages back again!! They never went anywhere. I know that the number of visitors has declined, but I am still very much alive and kicking.

The URL is http://web.telia.com/~u85920178/

I had assumed that http://web.telia.com/~u85920178/ was so difficult to remember that a few visitors had forgotten me, but over last year I have got a new messageboard at http://amazingforums.com/forum2/SM0VPO/forum.html and introduced a couple of new projects, including a 400mW 88-108MHz PA (works well at 50MHz, 70MHz and 144MHz), and a VHF gain antenna, with calculator, that can be built and tested within about 15 minutes (50MHz to 900MHz - works well on 144-432MHz and 446MHz).

My e-mail address sm0vpo(at)home(dot)se got100's of messages each time I logged on: 95% SPAM. I filled the mailbox and deleted the account from Outlook. After a year of messages bouncing I hope the spammers will have moved on and I can use it again. In the meantime you can write to me on oeieio(at)hotmail.com or the old trusty harryvpo(at)hotmail.com (if the SPAM there continues I may close harryvpo).

New projects for the new year? Yes. Loads of ideas, some already in progress, including:
- Article about static electricity - will include a bit of humour
- Stereo encoder
- Tuneable VHF NBFM Receiver for 145-156MHz
(or any 1MHz chunk from 50MHz to 500MHz)
- Tuneable VHF NBFM transmitter (---ditto---)
- Practical antenna info - how-to, with photo's
- Soldering video (15 minutes VCD) still on the list

??

That doesn't look like 'madness' to me. The SB104 is indeed a
pretty decent radio.

If I needed one, I would be bidding on that one myself (though I
will say that the current price is fairly close to the upper limit of
what I'd consider 'reasonable' for that radio).

Keep the peace(es).

Well, that's being pretty generous! It is insensitive, full of beeping
birdies (from the frequency counter), has a transmitter that is prone to
spurious oscillations, and drifts like a Swan... The transmitter's
modulation "quacks" out of the radio's speaker, but the transmitted
audio is quite pleasant to listen to.

All in all, you would be better off with most any other radio.

That auction was very interesting, as I had never watched a bid retraction in the bid history before. True, the bidding was up over $1000, and k7hbc was still top bidder. Once he retracted his bid, the auction toppled down to gbp333's last bid over somebody else, at a bit over $100. Interestingly, the history of the bidding between those events just disappears from eBay!

I don't have much sympathy for either bidder. k7hbc took over 3 days to figure out he "made a mistake" and retract his bid. He's damn lucky the seller is letting him, since eBay TOS says a retraction based on a mistake must be done quite rapidly. At minimum, he owes the seller a public apology for creating a situation where many thought this was a fraudulent auction. I think that if it takes you three days to figure out that you bid $10,000 instead of $100, you shouldn't be allowed to turn on a transmitter.

The other bidder may get his radio, since everyone now knows he was once willing to go to $1000 for it! Why bother to bid against him, unless you really, really HAVE to have it. Who knows? But one interesting thing is that gpb333 has been on eBay for about 20 months, but he hasn't bothered to

reciprocate feedback for almost 18 months. Those kind of guys piss me off.

I haven't decided which is worse, guys that don't give feedback, or sellers that wait to see what you give them before they give you feedback.

I recently bought an item, and the seller took 3 weeks to ship my item. He came up with a cockeyed story about how paypal didn't notify him that I had paid. (I paid the morning after the sale) The item was described as complete, but it arrived poorly packed, and missing a major component. 1 day short of a month from the end of auction until the item was in my hand.

The seller echoed my feedback, so I got what I gave him.... Yet as a buyer, I did everything in a most proper way. Now my feedback says I am a late shipper, even though I was a buyer!

The feedback system is seriously flawed. Each party shouldn't be able to tell what the other party writes about them until everything is totally done.

Well, maybe, but nobody says you have to take it at face value. I usually dig through a few previous auctions of the seller to see if any interesting patterns emerge. If I see any notable negatives I look at the buyer who left them and then look at his record. Patterns of feedback abuse are often easy to detect. Too, just because feedback is negative doesn't mean its truthful. And of course, sometimes you just plain lose. But on the average, ebay treats my OK.

Had a good one just today. I bought a piece of electronic equipment (B&W distortion analyzer) from a guy who ran an antique shop. The BIN price was

$15, and in the photos the thing looked flawless. I took the BIN. Sent in payment via Paypal immediately. 10 days and 3 emails later, no communication from the seller. I send the 4th e-mail, and 15 minutes later the thing shows up, beautifully packaged. I open it up and the thing is absolutely flawless, perfect cosmetics, working and in calibration. STILL haven't received any communication from the seller, not that it matters at this point. What feedback do you give? A perfect product and a perfect transaction with absolutely NO communication...I can't say that shipment was speedy, although I can't say that it was slow. It's not the way I prefer to do business, but it worked and I got more than I had hoped for.

Sometimes it's best just to cool it. Go into an auction understanding that little things WILL be wrong. Bid accordingly. Ask lots of questions and judge the seller by his responses.

A great one I have started to see is "Positive" feedback with negative written comments!

Having so many buyers and sellers with 100% positive feedback reminds me of Garrison Keillor's line; "where all the children are above average."

These "positives" come about out of fear that the seller will trash the buyer if he gives him a negative feedback. In my case, I gave the seller a positive that said it took 3 weeks to ship. So I now have the same feedback sitting in my list... yet I was the buyer, and paid the morning after the sale.

EBay should keep the feedback blind until both parties have submitted their feedback. Each party should be forced to submit feedback. As it now stands, if you say anything worse than a "Highly recommend!!! AAAAAAAA++++++++", you will get trashed by the seller, and you will have no recourse.

It's not in the NTE book and I don't have a data sheet on it. If you can
give me numbers, I can see what dual gate parts might match it. I have
some 3N-series stuff in the junk box here but no Japanese parts and not
much documentation for the older Japanese FETs.

Gain, transconductance, maximum voltage might be enough. This is being
used in a mixer stage, right, so the linearity isn't critical?

And your insiteful reply was signal, I suppose? From where
I sit, it has zero useful content.... much like this note.

-Chuck

6428. FA - Worcester Space Magnet SM-2 LOOP ANTENNA for AM BCB DXing

Newsgroup: rec.radio.amateur.boatanchors
